Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

## 5.10 Categories of development and assessment – Overlays

The following tables identify where an overlay changes the category of assessment from that stated in a zone or local plan and the relevant assessment benchmarks.

Note—Some overlays may only be included for information purposes. This should not change the category of assessment or assessment benchmarks in the Planning Scheme.

**Table 5.10.1 Acid sulfate soils overlay**

| Acid sulphate soils overlay                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                          |                                                                                            |

~~Table 6.2.2.2.1—Maximum building heights in District centre zone~~

~~Table 6.2.10.2.1—Maximum building heights in Low-medium density residential zone~~

~~Table 6.2.13.2.1—Maximum building heights in Mixed use zone~~

## Maps in Part 6

Zoning map ~~ZM—01:20 (Zoning map)~~

## Part 6 Zones

### 6.1 Preliminary

- (1) Zones organise the Planning Scheme area in a way that facilitates the location of preferred or acceptable land uses.
- (2) Zones are mapped and included in Schedule 2 (Mapping).
- (3) The categories of development and assessment for development in a zone are in Part 5 (Tables of assessment).
- (4) Assessment benchmarks for zones are contained in a zone code.
- (5) A precinct may be identified for part of a zone – Table 6.1.1 lists the precincts and their corresponding zones.

**Table 6.1.1 Precincts and corresponding zones**

| Precinct                | Zone                           |
|-------------------------|--------------------------------|
| Airlie Beach Precinct A | Mixed use                      |
| Airlie Beach Precinct B | Low-medium density residential |
| Airlie Beach Precinct C | Mixed use                      |
| Airlie Beach Precinct D | District centre                |
| Airlie Beach Precinct E | District centre                |
| Airlie Beach Precinct F | Mixed use                      |
| Airlie Beach Precinct G | Mixed use                      |

- (6) Precinct provisions are contained in the corresponding zone codes.
- (7) Each zone code identifies the following:
  - (a) the purpose of the code; and
  - (b) the overall outcomes that achieve the purpose of the code.
- (8) The following are the zone codes for the Planning Scheme:

#### **Residential zones category**

- (a) Low density residential zone code;
- (b) Low-medium density residential zone code; and
- (c) Tourist accommodation zone code.

#### **Centre zones category**

- (a) Major centre zone code;
- (b) District centre zone code;
- (c) Local centre zone code; and

- (d) Neighbourhood centre zone code.

**Industry zones category**

- (a) Low impact industry zone code;
- (b) Medium impact industry zone code;
- (c) High impact industry zone code;
- (d) Special industry zone code;
- (e) Waterfront and marine industry zone code; and
- (f) Industry investigation zone code.

**Recreation zones category**

- (a) Recreation and open space zone code.

**Environmental zones category**

- (a) Environmental management and conservation zone code.

**Other zones category**

- (a) Community facility zone code;
- (b) Emerging community zone code;
- (c) Mixed use code;
- (d) Rural zone code; and
- (e) Rural residential zone code.

## 6.2 Zone codes

### 6.2.1 Community facilities zone code

#### 6.2.1.1 Application

This code applies to assessable development:

- (a) within the Community facilities zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Community facilities zone code by the tables of assessment in Part 5 (Tables of assessment).

#### 6.2.1.2 Purpose and overall outcomes

- (1) The purpose of the Community facilities zone code is to provide for community related activities and facilities whether under public or private ownership. These may include the provision of municipal services, public utilities, government installations, hospitals, schools, transport and telecommunications networks and community infrastructure of an artistic, social or cultural nature.
- (2) The purpose of the Community facilities zone code in the local government area is to provide for a range of accessible Community, Recreation and Other activities at varying degrees of scale and intensity, which operate effectively and meet the social, educational, spiritual, cultural or health needs of the Whitsunday Region's existing and future communities.
- (3) The purpose of the Community facilities zone code will be achieved through the following overall outcomes:
  - (a) development in the zone caters primarily for specified uses, facilities and works, which include:
    - (i) land used, owned or operated by Federal, State or Local government for Community and Other activities, such as cemeteries, community uses, emergency services, hospitals, air services, substations, major electricity infrastructure and utility installations; or
    - (ii) uses, facilities and works, which by virtue of their location, intensity, combination of uses, operations or site characteristics are best managed in a use-specific land use allocation; or
    - (iii) private Community activities and facilities, including community uses, educational establishments, hospitals and places of worship;
  - (b) a range of allied and compatible activities may also be established in this zone. These include Recreational activities, such as indoor/outdoor sport and recreation uses;
  - (c) Community activities and associated uses are located to optimise their accessibility, operational efficiency and benefit to the public;
  - (d) development accommodates the specific operational, functional and locational needs of the particular use, whilst maintaining a low rise built form compatible with the intended development in the surrounding area. ~~Buildings are to have a maximum height of 8.5m above ground level, or 10.0m above ground level where located on slopes exceeding 15%;~~

- (e) development provides a high level of amenity, maintains the safety of people, buildings and works, and effectively manages the potential for land use conflict with existing and intended surrounding development;
- (f) uses, buildings and works are located, designed and operated to minimise adverse impacts on the amenity of any adjacent properties, nearby residential or public spaces, having regard to:
  - (i) traffic conditions;
  - (ii) noise or vibration;
  - (iii) dust, odour or similar emissions;
  - (iv) privacy;
  - (v) safety and security;
  - (vi) illumination;
  - (vii) access to natural light and ventilation; and
  - (viii) drainage.
- (g) existing and planned Community activities and associated uses are protected from the intrusion of incompatible uses that could limit the ongoing operation of existing Community activities or prejudice appropriate new activities;
- (h) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (i) development provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, permeability and ease of movement within and to the site;
- (j) development is provided with a level of infrastructure and essential services that is commensurate with the location, nature, scale and intensity of the use;
- (k) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (l) the safety and efficiency of existing and future infrastructure (i.e. road, rail, pipelines, telecommunications and transmission infrastructure) is protected, and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

## 6.2.2 District centre zone code

### 6.2.2.1 Application

This code applies to assessable development:

- (a) within the District centre zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the District centre zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.2.2 Purpose and overall outcomes

- (1) The purpose of the District centre zone code is to provide for a mix of uses and activities. It includes a concentration of land uses, including retail, commercial, residential, offices, administrative and health services, community, small-scale entertainment and recreational facilities capable of servicing a district.
- (2) The purpose of the District centre zone code in the local government area is to provide for a range of activities that complement but do not compete with the role and function of the major activity centres. The District centre zone serves the needs of district level catchments and distinct communities in centres that are highly accessible and well connected to the catchment areas. District centres are developed as well-designed, safe and visually attractive business, community and employment centres, predominantly in a low-rise building format, where significant off-site impacts are avoided.
- (3) The purpose of the District centre zone code will be achieved through the following overall outcomes:
  - (a) development provides for a range of Business and Entertainment activities that service the district level needs of surrounding smaller centres and residential areas. These uses include, but are not limited to, food and drink outlets, offices, shops, shopping centres, theatres, clubs and function facilities;
  - (b) development provides for a range of complementary Community activities in appropriate locations to encourage community interaction and support the health, safety and wellbeing of residents. Such uses include community uses, child care centres, emergency services, health care services and places of worship;
  - (c) Recreation, Industry and Other activities, such as indoor sport and recreation, service industries and utility installations, may be established where they are compatible with the character and amenity of surrounding development;
  - (d) beyond existing uses, development provides for a limited range of Accommodation activities, including caretaker's accommodation, dual occupancies, multiple dwellings, rooming accommodation and short-term accommodation, where such uses are ancillary to and support the predominant business functions of the zone;
  - (e) development of Business activities is of a scale and intensity that is consistent with the intended role and function of the particular activity centre and the Whitsunday hierarchy of centres<sup>1</sup>. For development in the District centre zone, this includes consideration of the following:

<sup>1</sup> Development within the District centre zone may be requested to provide an Economic impact assessment report in accordance with PSP SC6.7 (Growth management).

- (i) the function and role of existing Business activities in district centres is maintained;
  - (ii) shopping centres have a maximum retail and commercial GLA in the order of 5,000m<sup>2</sup>;
  - (iii) not more than one full-line supermarket is established in each allocated district centre, unless there is a demonstrated need and there are no adverse impacts on the major activity centre; and
  - (iv) higher order shopping facilities, including department stores and discount department stores, are not established in the District centre zone
- (f) ~~unless otherwise specified in a local plan code or Table 6.2.2.2.1 (Maximum building heights in District centre zone),~~ development has a low to medium-rise built form that is compatible with the intended scale and character of the streetscape and surrounding area, ~~with a maximum building height of 12.0m above ground level;~~

**Table 6.2.2.2.1 – Maximum building heights in District centre zone**

| District centre location | Maximum building height |
|--------------------------|-------------------------|
| Airlie Beach Precinct D  | 18m                     |
| Airlie Beach Precinct E  | 14m                     |

- (g) development may provide for Accommodation activities as part of mixed use premises to encourage and facilitate urban consolidation;
- (h) development incorporates a high standard of architecture, urban design and landscaping that creates attractive and functional buildings, streets and places;
- (i) development provides an active and articulated streetscape allowing for casual surveillance and pedestrian access from the street, with demonstrated connectivity to surrounding land uses;
- (j) development is located, designed and operated in a manner that does not unreasonably impact on the amenity of surrounding premises, having regard to matters such as traffic, noise, lighting, waste, fumes, odours, hours of operation, privacy, overlooking and public health and safety;
- (k) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (l) development provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, permeability and ease of movement in a manner that encourages public transport accessibility and use;
- (m) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~

| Whitsunday Regional Council Planning Scheme – Part 6 – ~~November 2021~~ July 2017 (V4.01)

- (n) development demonstrates that an appropriate level of transport infrastructure is available and will not unreasonably interfere with the safe and efficient operation of the surrounding road network<sup>2</sup>;
  - (o) development is provided with the full range of urban services, including reticulated water, sewerage, stormwater drainage, sealed roads, electricity and telecommunications infrastructure;
  - (p) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- |
- (q) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

---

<sup>2</sup> Development within the District centre zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

## 6.2.3 Emerging community zone code

### 6.2.3.1 Application

This code applies to assessable development:

- (a) within the Emerging community zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Emerging community zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.3.2 Purpose and overall outcomes

- (1) The purpose of the Emerging community zone code is to:
  - (a) identify land that is suitable for urban purposes and conserve land that may be suitable for urban development in the future;
  - (b) manage the timely conversion of non-urban land to urban purposes; and
  - (c) prevent or discourage development that is likely to compromise appropriate longer-term land uses.
- (2) The purpose of the Emerging community zone code in the local government area is to ensure that development is designed and coordinated to achieve safe, healthy and sustainable new urban communities, which are well integrated with existing communities and provided with services and infrastructure.
- (3) The purpose of the Emerging community zone code will be achieved through the following overall outcomes:
  - (a) prior to the granting of development approvals in accordance with any strategic planning undertaken by the Council:
    - (i) interim land uses and other development is predominantly limited to existing uses to ensure that the future potential of land to be used for urban purposes is not compromised; and
    - (ii) development avoids the sporadic or premature creation of additional lots<sup>3</sup>;
  - (b) development is undertaken in accordance with any strategic plans, prepared or approved master plan or a preliminary approval pursuant to the Act, demonstrating that:
    - (i) development occurs in accordance with any strategic planning undertaken by the Council;
    - (ii) unless otherwise specified in a local plan code, development within the zone co-ordinates with existing or future planned development through logical planning of the full extent of the Emerging community zone and neighbouring communities<sup>4</sup>;

<sup>3</sup> Development within the Emerging community zone may be requested to provide a Development needs assessment report in accordance with PSP SC6.7 (Growth management).

<sup>4</sup> Development within the Emerging community zone may be requested to provide a Structure plan in accordance with PSP SC6.7 (Growth management).

Whitsunday Regional Council Planning Scheme – Part 6 – ~~November 2021~~ July 2017 (V4.01)

- (iii) ~~unless otherwise specified in a local plan code,~~ development provides for a low-rise building form that is compatible with the character of the surrounding area, ~~with a maximum building height of 8.5m above ground level, or 10.0m above ground level where located on slopes exceeding 15%;~~
- (iv) development sensitively responds to scenic values and landscape character elements, particularly prominent ridgelines, foreshores, coastal landforms, significant landmarks, prominent stands of vegetation and rural and coastal views and vistas;
- (v) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (vi) the scale, density and layout of development facilitates an efficient land use pattern that:
  - (A) is well connected to other parts of the urban fabric and planned future development;
  - (B) supports walkable neighbourhoods that are well connected to employment nodes, centres, open space and recreation areas, community services and educational opportunities; and
  - (C) encourages public transport accessibility and use;
- (vii) a mix of land uses and housing types is provided;
- (viii) a high level of residential amenity, personal health and safety and protection for property is provided;
- (ix) a sense of character and community inclusion is promoted;
- (x) communities are supported by interconnected open space networks and local centres incorporating attractive, comfortable, safe and convenient public spaces;
- (xi) development provides for pedestrian and bicycle movement networks that maximise connectivity, permeability and ease of movement within emerging community areas and to existing urban areas;
- (xii) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~
- (xiii) development demonstrates that an appropriate level of transport infrastructure is available and will not unreasonably interfere with the safe and efficient operation of the surrounding road network<sup>5</sup>;
- (xiv) conflicts with the existing or potential productive use of adjoining or nearby rural lands are avoided or appropriately managed;

<sup>5</sup> Development within the Emerging community zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

- (xv) development occurs in a logical sequence and facilitates the efficient and timely provision of infrastructure and services prior to, or in conjunction with, the initial stages of the development;
- (xvi) development is provided with the full range of urban services, including parks, reticulated water, sewerage, stormwater drainage, sealed roads, pathways, electricity and telecommunications infrastructure;
- (xvii) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (xviii) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected, and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

## **6.2.4 Environmental management and conservation zone code**

### **6.2.4.1 Application**

This code applies to assessable development:

- (a) within the Environmental management and conservation zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Environmental management and conservation zone code by the tables of assessment in Part 5 (Tables of assessment).

### **6.2.4.2 Purpose and overall outcomes**

- (1) The purpose of the Environmental management and conservation zone code is to provide for the protection and maintenance of areas identified as supporting significant biological diversity and ecological integrity.
- (2) The purpose of the Environmental management and conservation zone code in the local government area is to provide for the protection and rehabilitation of land to maintain biological diversity, ecological processes, coastal processes, water quality, landscape character, scenic amenity, cultural heritage significance and community wellbeing.
- (3) The purpose of the Environmental management and conservation zone code will be achieved through the following overall outcomes:
  - (a) areas identified as having significant environmental values for environmental diversity and functioning, water catchment, beach protection or coastal management and historical or cultural significance are:
    - (i) protected for their importance in contributing to environmental sustainability; and
    - (ii) appropriately managed to the general exclusion of most forms of development;
  - (b) Recreation activities, limited to parks, may be established in the zone where such development:
    - (i) supports environmental values and provides opportunities for appreciation or study of those values;
    - (ii) is compatible with and has a direct connection with the environmental values; and
    - (iii) provides opportunities for recreational pursuits that have a direct connection with the environmental values of the land;
  - (c) to maintain the intended character and amenity of the zone, development integrates with and compliments the natural landscape and has a low-rise built form ~~with a maximum building height of 8.5m above ground level, or 10.0m above ground level where located on slopes exceeding 15%;~~
  - (d) Other activities, limited to utility installations, may be provided where such activities are located, designed and operated to avoid significant impacts on environmental systems and processes;

Whitsunday Regional Council Planning Scheme – Part 6 – ~~November 2021~~ July 2017 (V4.01)

- (e) green and open space corridor networks are established across the region providing movement opportunities for people and wildlife between the coast and hinterland and access to the Region's cultural heritage and environmental significant features;
- (f) development maintains and protects the scenic values and landscape character of the zone, particularly coastal views and vistas, prominent ridgelines, escarpments, foreshores, coastal landforms and significant landmarks that are in both public and private ownership;
- (g) natural features, such as creeks, gullies, waterways, wetlands, flora and fauna communities, habitats, vegetation and bushland, are protected and buffered from activities in the zone and adjoining land uses;
- (h) development provides for infrastructure and services that are commensurate with the very limited range of small scale and low-key activities that are expected to occur in the zone. Such infrastructure and services are designed and operated to maintain public safety and environmental health; and
- (i) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected, and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

## 6.2.5 High impact industry zone code

### 6.2.5.1 Application

This code applies to assessable development:

- (a) within the High impact industry zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the High impact industry zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.5.2 Purpose and overall outcomes

- (1) The purpose of the High impact industry zone code is to provide for high impact industry uses. It may include non-industrial and business uses that support the industrial activities where they do not compromise the long-term use of the land for industrial purposes. Activities considered appropriate in this zone are defined as high impact industry in the schedule of definitions.
- (2) The purpose of the High impact industry zone code in the local government area is to provide for a range of Industry activities at a larger scale and higher intensity relative to the Medium impact industry zone.
- (3) The purpose of the High impact industry zone code will be achieved through the following overall outcomes:
  - (a) uses in the zone are predominantly for higher intensity, higher impact Industry activities that have the potential to generate significant offsite impacts, including medium impact industry and high impact industry uses;
  - (b) development of ancillary Accommodation and Business activities may be established only where directly supporting the ongoing Industry activities of the zone. These uses are limited to caretaker's accommodation, food and drink outlets, offices and service stations. Such uses must be appropriately located and designed to ensure that they do not compromise the ongoing operation and viability of Industry activities<sup>6</sup>;
  - (c) development of limited Community and Other activities, compatible with this zone, may also be established. Such uses are limited to crematoriums, emergency services, air services, substations, telecommunications facilities and utility installations;
  - (d) existing and planned Industry activities are protected from the intrusion of incompatible uses that may compromise or conflict with the primary use of premises for industry purposes;
  - (e) development provides for a range of lot sizes, including an appropriate proportion of larger lots to cater for larger format and land consumptive Industry activities;
  - (f) development has a built form that is compatible with the intended scale and character of the streetscape and surrounding area whilst accommodating industry operating requirements, ~~with a maximum building height of 20.0m above ground level;~~

<sup>6</sup> Development within the High impact industry zone may be requested to provide an Economic impact assessment report in accordance with PSP SC6.7 (Growth management).

- (g) Industry activities integrate with the locality by providing a high quality of built form and landscaping in keeping with the expectations of a modern, safe, and attractive industrial environment;
- (h) development ensures that uses and works for industrial purposes are located, designed and managed to maintain public health and safety, avoid significant adverse effects on the natural environment and minimise impacts on non-industrial land and sensitive uses;
- (i) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (j) development provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use<sup>7</sup>;
- (k) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~
- (l) development is provided with the full range of urban services to support industry and employment needs, including reticulated water, sewerage, stormwater drainage, sealed roads, pathways, electricity and telecommunications infrastructure;
- (m) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (n) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

<sup>7</sup> Development within the High impact industry zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

## 6.2.6 Industry investigation zone code

### 6.2.6.1 Application

This code applies to assessable development:

- (a) within the Industry investigation zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Industry investigation zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.6.2 Purpose and overall outcomes

- (1) The purpose of the Industry investigation zone code is to identify and protect land that may be suitable for Industry activities where further detailed planning, investigations and studies are required to determine the suitability of the Industry investigation zone for use as an industry zone.
- (2) The purpose of the Industry investigation zone code in the local government area is to ensure that development is designed and coordinated to support Industry activities of a nature and scale that is compatible with the surrounding area and provided with services and infrastructure.
- (3) The purpose of the Industry investigation zone code will be achieved through the following overall outcomes:
  - (a) prior to the granting of development approvals in accordance with strategic planning undertaken by Council or approved State Development Area Development Schemes:
    - (i) interim land uses and other development is predominantly limited to existing uses to ensure that the future potential of land to be used for urban purposes is not compromised; and
    - (ii) development avoids the sporadic or premature creation of additional lots<sup>8</sup>;
  - (b) development is undertaken in accordance with any strategic plan, prepared and approved master plan or a preliminary approval pursuant to the Act, demonstrating that:
    - (i) development occurs in accordance with any strategic planning undertaken by the Council;
    - (ii) unless otherwise specified in a local plan code, development within the zone co-ordinates with existing or future planned development through logical planning of the full extent of the Industry investigation zone and neighbouring communities<sup>9</sup>;
    - (iii) ~~unless otherwise specified in a local plan code,~~ development provides for a low-rise building form that is compatible with the character of the surrounding area, ~~with a maximum building height of 8.5m above ground level, or 10.0m above ground level where located on slopes exceeding 15%;~~

<sup>8</sup> Development within the Industry investigation zone may be requested to provide a Development needs assessment report in accordance with PSP SC6.7 (Growth management).

<sup>9</sup> Development within the Industry investigation zone may be requested to provide a Structure plan in accordance with PSP SC6.7 (Growth management).

- (iv) development sensitively responds to scenic values and landscape character elements, particularly prominent ridgelines, foreshores, coastal landforms, significant landmarks, prominent stands of vegetation and rural and coastal views and vistas;
- (v) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (vi) development provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use;
- (vii) the scale, density and layout of development facilitates an efficient land use pattern that:
  - (A) is well connected to other parts of the urban fabric and planned future development; and
  - (B) encourages public transport accessibility and use;
- (viii) Industry activities are adequately separated from sensitive uses to minimise the likelihood of environmental harm or environmental nuisance occurring;
- (ix) development is sited or co-located having regard to its servicing capabilities in terms of infrastructure, road, rail, proximity to sea, airports, other associated industries and work forces;
- (x) development provides for pedestrian and bicycle movement networks that maximise connectivity, permeability and ease of movement within industry investigation areas and to existing urban areas;
- (xi) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~
- (xii) conflicts with the existing or potential productive use of adjoining or adjacent non-industrial land are avoided or appropriately managed;
- (xiii) interim land uses and other development is predominantly limited to existing uses to ensure that the future potential of land to be used for urban purposes is not compromised;
- (xiv) development occurs in a logical sequence and facilitates the efficient and timely provision of infrastructure and services prior to, or in conjunction with, the initial stages of the development;
- (xv) the viability of both existing and future Industry activities are protected from the intrusion of incompatible uses;
- (xvi) development is provided with the full range of urban services, including reticulated water, sewerage, stormwater drainage, sealed roads, pathways, electricity and telecommunications infrastructure;

- (xvii) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (xviii) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

## 6.2.7 Local centre zone code

### 6.2.7.1 Application

This code applies to assessable development:

- (a) within the Local centre zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Local centre zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.7.2 Purpose and overall outcomes

- (1) The purpose of the Local centre zone code is to provide for a limited range of land uses and activities to service local needs. It includes local shopping, local employment nodes, commercial uses, cafes and dining, entertainment, community services and residential development, where it can integrate and enhance the fabric of the activity centre but is not the predominant use.
- (2) The purpose of the Local centre zone code in the local government area is to provide for a range of Business and Community activities that complement, but do not compete with, the role and function of higher order activity centres. The zone meets the convenience service needs of smaller rural, coastal townships or discrete residential areas and provides local employment opportunities. Local centres are developed as well-designed, safe and visually attractive centres, predominantly in a low-rise building format, where significant off-site impacts are avoided.
- (3) The purpose of the Local centre zone code will be achieved through the following overall outcomes:
  - (a) development provides for a range of Business activities that service the local level convenience needs of residents and surrounding tourism or primary production industries and offers locally-based employment opportunities. These uses include, but are not limited to, food and drink outlets, offices, shops, shopping centres and veterinary services;
  - (b) development provides for a range of complementary Community activities in appropriate locations to encourage community interaction and support the health, safety and wellbeing of local residents. These uses include child care centres, community uses, emergency services and health care services;
  - (c) Recreation, Industry and Other activities may be established where they are compatible with the character and amenity of surrounding development. Such uses include indoor sport and recreation, service industries and utility installations;
  - (d) beyond existing uses, development provides for a limited range of Accommodation activities, including caretaker's accommodation, dual occupancies and multiple dwellings, where such uses are ancillary and support the predominant business functions of the zone;
  - (e) development of Business activities is of a scale and intensity that is consistent with the intended role and function of the particular activity centre and the Whitsunday hierarchy of centres<sup>10</sup>. For development in the Local centre zone, this includes consideration of the following:

<sup>10</sup> Development within the Local centre zone may be requested to provide an Economic impact assessment report in accordance with PSP SC6.7 (Growth management).

- (i) the function and role of existing Business activities in the zone is maintained and not significantly expanded;
  - (ii) shopping centres have a maximum retail and commercial GLA in the order of 1,500m<sup>2</sup>; and
  - (iii) higher order shopping facilities, including full-line supermarkets, department stores and discount department stores are not established in the zone;
- (f) development has a low-rise built form that is compatible with the intended scale and character of the streetscape and surrounding area, ~~with a maximum building height of 8.5m above ground level, or 10.0m above ground level where located on slopes exceeding 15%;~~
  - (g) development incorporates a high standard of architecture, urban design and landscaping that creates attractive and functional buildings, streets and places;
  - (h) development provides an active and articulated streetscape allowing for casual surveillance and pedestrian access from the street, with demonstrated connectivity to surrounding land uses;
  - (i) development is located, designed and operated in a manner that does not unreasonably impact on the amenity of surrounding premises, having regard to matters, such as traffic, noise, lighting, waste, fumes, odours, hours of operation, privacy, overlooking and public health and safety;
  - (j) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
  - (k) development provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, permeability and ease of movement in a manner that encourages public transport accessibility and use;
  - (l) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~
  - (m) development demonstrates that an appropriate level of transport infrastructure is available and will not unreasonably interfere with the safe and efficient operation of the surrounding road network<sup>11</sup>;
  - (n) development is provided with the full range of urban services, including reticulated water, sewerage, stormwater drainage, sealed roads, electricity and telecommunications infrastructure;
  - (o) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
  - (p) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

<sup>11</sup> Development within the Local centre zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

## 6.2.8 Low density residential zone code

### 6.2.8.1 Application

This code applies to assessable development:

- (a) within the Low density residential zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Low density residential zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.8.2 Purpose and overall outcomes

- (1) The purpose of the Low density residential zone code is to provide for predominantly dwelling houses supported by community uses and small-scale services and facilities that cater for local residents.
- (2) The purpose of the Low density residential zone code in the local government area is to provide for predominantly low density, low-rise Accommodation activities on a range of lot sizes. Whilst primarily intended to accommodate dwelling houses, limited other Accommodation activities may also be established in the zone where compatible with the prevailing residential character and amenity.
- (3) The purpose of the Low density residential zone code will be achieved through the following overall outcomes:
  - (a) development provides for low density housing types, primarily in the form of dwelling houses that promote variety in housing size and choice;
  - (b) limited other Accommodation activities, such as community residences, residential care facilities and retirement facilities, may be established in the zone, where such uses are compatible with the prevailing scale and residential character of surrounding development;
  - (c) home based businesses that are compatible with local residential amenity may be established in the zone;
  - (d) development may provide for limited Business, Community and Other activities, including sales offices, shops (limited to corner stores), community uses, emergency services and utility installations, which:
    - (i) directly support the day to day needs of the immediate residential community;
    - (ii) are a small-scale and low intensity;
    - (iii) are compatible with the local residential character and amenity of the area;
    - (iv) wherever possible, are co-located with similar activities within the zone;
    - (v) are accessible to the population they serve and are located on the major road network rather than local residential streets; and
    - (vi) do not have a significant detrimental impact on the amenity of surrounding residents, having regard to hours of operation, generation of odours, noise, waste products, dust, traffic, electrical interference, lighting and visual impacts;

- (e) development occurring in residential neighbourhoods takes place in a planned, orderly manner that promotes certainty and maintains a high level of residential amenity for existing residents, in terms of the type, design and density of development that may occur over time;
- (f) development in the zone provides for an attractive, open and low density form of urban residential living that promotes a sense of character and community inclusion;
- (g) development provides for a range of lot sizes;
- (h) to maintain the low density character and residential amenity of the zone, development has a low-rise built form ~~with a maximum building height of 8.5m above ground level, or 10.0m above ground level where located on slopes exceeding 15%;~~
- (i) the scale, density and layout of development facilitates an efficient land use pattern that:
  - (i) is well connected to other parts of the urban fabric and planned future development;
  - (ii) supports walkable neighbourhoods that are well connected to employment nodes, centres, open space and recreation areas, community services and educational opportunities; and
  - (iii) encourages public transport accessibility and use;
- (j) development is designed and located in a manner which makes a positive contribution to the streetscape and is sympathetic to the intended scale and character of surrounding development;
- (k) development incorporates a high level of residential amenity, personal health and safety and protection for property;
- (l) communities are supported by interconnected open space networks and local centres incorporating attractive, comfortable, safe and convenient public spaces;
- (m) development provides for pedestrian and bicycle movement networks that maximise connectivity, permeability and ease of movement within emerging community areas and to existing urban areas;
- (n) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~
- (o) development demonstrates an appropriate level of transport infrastructure is available and that development will not unreasonably interfere with the safe and efficient operation of the surrounding road network<sup>12</sup>;
- (p) development sensitively responds to scenic values and landscape character elements, particularly prominent ridgelines, foreshores, coastal landforms, significant landmarks, prominent stands of vegetation and rural and coastal views and vistas;

<sup>12</sup> Development within the Low density residential zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

- (q) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (r) development is provided with the full range of urban services to support the needs of the community, including parks, reticulated water, sewerage, stormwater drainage, sealed roads, pathways, electricity and telecommunications infrastructure;
- (s) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (t) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

## 6.2.9 Low impact industry zone code

### 6.2.9.1 Application

This code applies to assessable development:

- (a) within the Low impact industry zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Low impact industry zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.9.2 Purpose and overall outcomes

- (1) The purpose of the Low impact industry zone code is to provide for service and low impact industry uses. It may include non-industrial and business uses that support Industrial activities where they do not compromise the long-term use of the land for industrial purposes. Activities considered appropriate in this zone are defined as low impact industry or service industry in the schedule of definitions.
- (2) The purpose of the Low impact industry zone code in the local government area is to provide for low intensity Industry activities of a nature and scale that are compatible with intended development in the surrounding area.
- (3) The purpose of the Low impact industry zone code will be achieved through the following overall outcomes:
  - (a) uses in the zone are predominantly for low intensity, low impact Industry activities, including bulk landscape supplies, low impact industry, research and technology industry, service industry and warehouse uses;
  - (b) development of ancillary Accommodation activities may be established only where directly supporting the ongoing Industry activities of the zone. These uses are limited to caretaker's accommodation;
  - (c) development of Business, Rural and Other activities, which are not ancillary but are compatible with Industry activities, may be established in the zone. These uses include, but are not limited to, agricultural supplies stores, hardware and trade supplies, offices, outdoor sales, showrooms, rural industries, transport depots and utility installations. Such uses must be appropriately located and designed to ensure that they do not compromise the ongoing operation and viability of Industry activities<sup>13</sup>;
  - (d) development of limited Community and Recreation activities compatible with this zone may also be established. Such uses are limited to community uses, emergency services, funeral parlours and indoor sport and recreation;
  - (e) existing and planned Industry activities are protected from the intrusion of incompatible uses that may compromise or conflict with the primary use of premises for industry purposes;
  - (f) development provides for a range of lot sizes to cater for varying industry needs and user requirements;
  - (g) development has a predominantly low-rise built form that is sympathetic to the intended scale and character of the streetscape and surrounding area; ~~with a maximum building height of 10.0m above ground level;~~

<sup>13</sup> Development within the Low impact industry zone may be requested to provide an Economic impact assessment report in accordance with PSP SC6.7 (Growth management).

- (h) Industry activities integrate with the locality by providing a high quality of built form and landscaping in keeping with the expectations of a modern, safe and attractive industrial environment;
- (i) development ensures that uses and works for industrial purposes are located, designed and managed to maintain public health and safety, avoid significant adverse effects on the natural environment and minimise impacts on non-industrial land and sensitive uses;
- (j) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (k) development provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use<sup>14</sup>;
- (l) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~
- (m) development is provided with the full range of urban services to support industry and employment needs, including parks, reticulated water, sewerage, stormwater drainage, sealed roads, pathways, electricity and telecommunications infrastructure;
- (n) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (o) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

<sup>14</sup> Development within the Low impact industry zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

## **6.2.10 Low-medium density residential zone code**

### **6.2.10.1 Application**

This code applies to assessable development:

- (a) within the Low-medium density residential zone code as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Low-medium density residential zone code by the tables of assessment in Part 5 (Tables of assessment).

### **6.2.10.2 Purpose and overall outcomes**

- (1) The purpose of the Low-medium density residential zone code is to provide for a range and mix of dwelling types, including dwelling houses and multiple dwellings supported by community uses and small-scale services and facilities that cater for local residents.
- (2) The purpose of the Low-medium density residential zone code in the local government area is to provide for low-medium density Accommodation activities in a low to medium-rise format, comprising of a range of single and multiple residential uses for permanent residents.
- (3) The purpose of the Low-medium density residential zone code will be achieved through the following overall outcomes:
  - (a) development provides for a compatible mix of low and medium density residential dwelling choices and forms, predominantly for permanent living, including dwelling houses, dual occupancies and multiple dwellings (such as townhouses, villas, terraces and row houses);
  - (b) other low-medium density Accommodation activities, such as community residence, relocatable home parks, residential care facilities, retirement facilities, short-term accommodation and tourist parks, may also be provided. The operation and scale of these uses are compatible with, but do not detract from, the intended residential character and amenity of the zone;
  - (c) home based businesses that are compatible with local residential amenity may be established in the zone;
  - (d) development may provide for limited Business, Community and Other activities including sales offices, shops (limited to corner stores), community uses, emergency services and utility installations which:
    - (i) directly support the day to day needs of the immediate residential community;
    - (ii) are small-scale and low intensity;
    - (iii) are compatible with the local residential character and amenity of the area;
    - (iv) wherever possible, are co-located with similar activities within the zone;
    - (v) are accessible to the population they serve and are located on the major road network rather than local residential streets; and

- (vi) do not have a significant detrimental impact on the amenity of surrounding residents, having regard to hours of operation, generation of odours, noise, waste products, dust, traffic, electrical interference, lighting and visual impacts;
- (e) residential development encourages and facilitates urban consolidation;
- (f) ~~unless otherwise specified in a local plan code or Table 6.2.10.2.1 (Maximum building heights in Low-medium density residential zone),~~ development has a low to medium-rise built form that is compatible with the intended scale and character of the streetscape and surrounding area, ~~with a maximum building height of 12.0m above ground level;~~

**Table 6.2.10.2.1 – Maximum building heights in Low-medium density residential zone**

| Low-medium density residential location | Maximum building height |
|-----------------------------------------|-------------------------|
| Airlie Beach Precinct B                 | 14m                     |

- (g) the scale, density and layout of development facilitates an efficient land use pattern that:
  - (i) is well connected to other parts of the urban fabric and planned future development;
  - (ii) supports walkable neighbourhoods that are well connected to employment nodes, centres, open space and recreation areas, community services and educational opportunities; and
  - (iii) encourages public transport accessibility and use;
- (h) multi-storey development ensures that there is no unreasonable loss of amenity for surrounding development, having regard to:
  - (i) microclimate impacts, including the extent and duration of any overshadowing;
  - (ii) privacy and overlooking impacts;
  - (iii) impacts upon views and vistas; and
  - (iv) building massing and scale relative to its surroundings;
- (i) development is designed and located in a manner which makes a positive contribution to the streetscape and is sympathetic to the intended scale and character of surrounding development;
- (j) development incorporates a high level of residential amenity, personal health and safety and protection for property;
- (k) communities are supported by interconnected open space networks and local centres incorporating attractive, comfortable, safe and convenient public spaces;
- (l) development provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use;

- (m) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~
- (n) development demonstrates an appropriate level of transport infrastructure is available and that development will not unreasonably interfere with the safe and efficient operation of the surrounding road network<sup>15</sup>;
- (o) development sensitively responds to scenic values and landscape character elements, particularly prominent ridgelines, foreshores, coastal landforms, significant landmarks, prominent stands of vegetation and rural and coastal views and vistas;
- (p) development avoids or mitigates adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location design, operation and management;
- (q) development is provided with the full range of urban services to support the needs of the community, including parks, reticulated water, sewerage, stormwater drainage, sealed roads, pathways, electricity and telecommunications infrastructure;
- (r) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (s) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

<sup>15</sup> Development within the Low-medium density zone may be requested to provide a Traffic assessment report in accordance with PSP SC6.7 (Growth management).

## 6.2.11 Major centre zone code

### 6.2.11.1 Application

This code applies to assessable development:

- (a) within the Major centre zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Major centre zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.11.2 Purpose and overall outcomes

- (1) The purpose of the Major centre zone code is to provide for a mix of uses and activities. It includes concentrations of higher order retail, commercial, offices, residential, administrative and health services, community, cultural and entertainment facilities and other uses capable of servicing a sub-region in the Planning Scheme area.
- (2) The purpose of the Major centre zone code in the local government area is to accommodate a wide range of Business, Entertainment, Accommodation and Community activities in an active and vibrant mixed use environment. The scale and intensity of such development is consistent with the intended role and function of the Whitsunday hierarchy of centres.
- (3) The purpose of the Major centre zone code will be achieved through the following overall outcomes:
  - (a) development supports the role of the zone as the regional focus and location of the highest order and intensity of Business and Entertainment activities. Such uses include, but are not limited to, food and drink outlets, offices, shops, shopping centres, clubs, function facilities, hotels, theatres and tourist attractions;
  - (b) development provides the highest order of Community activities to service the regional needs of the centre and to encourage community interaction, health and wellbeing. These Community activities include child care centres, community uses, educational establishments, emergency services, health care services and hospitals and places of worship;
  - (c) Recreation, Industry and Other activities, such as indoor sport and recreation, service industries and utility installations may be established where they are compatible with the character and amenity of surrounding development;
  - (d) a mix of low-medium density Accommodation activities, such as dual occupancies, multiple dwellings, rooming accommodation and short-term accommodation uses are provided that are complementary to the predominant business functions of the zone, with residential buildings incorporating non-accommodation activities at street level to activate the public realm;
  - (e) development of Business activities is of a scale and intensity that is consistent with the intended role and function of the particular activity centre and the Whitsunday hierarchy of centres<sup>16</sup>;

<sup>16</sup> Development within the Major centre zone may be requested to provide an Economic impact assessment report in accordance with PSP SC6.7 (Growth management).

Whitsunday Regional Council Planning Scheme – Part 6 – ~~November 2021~~ July 2017 (V4.01)

- (f) Development has a low to medium-rise built form that is compatible with the intended scale and character of the streetscape and surrounding area, ~~with a maximum building height of 12.0m above ground level;~~
- (g) development provides for an efficient pattern of land use where the greatest mix of uses and highest intensity of development is located in areas with relatively high levels of access to public transport facilities. All development has a clear connection to the pedestrian, bicycle, public transport and road transport networks and infrastructure;
- (h) wherever possible, Business and Community activities are co-located and designed to contribute to safety, security and vitality of the centre;
- (i) the built form and urban design of development incorporates a high standard of architecture, urban design and landscaping that creates attractive and functional buildings, streets and places, in keeping with the primary role and focus of the zone as a major hub;
- (j) development contributes to the creation of an active, safe and legible public realm and, where appropriate, incorporates significant public open spaces including plazas, parks and gardens;
- (k) development provides an active and articulated streetscape allowing for casual surveillance and pedestrian access from the street, with connectivity to surrounding land uses;
- (l) development is located, designed and operated in a manner that does not unreasonably impact on the amenity of surrounding development, having regard to matters such as traffic, noise, lighting, waste, fumes, odours, hours of operation, privacy, overlooking and public health and safety;
- (m) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (n) development provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use;
- (o) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~
- (p) development demonstrates an appropriate level of transport infrastructure is available and that development will not unreasonably interfere with the safe and efficient operation of the surrounding road network<sup>17</sup>;
- (q) development is provided with the full range of urban services, including reticulated water, sewerage, stormwater drainage, sealed roads, electricity and telecommunications infrastructure;
- (r) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and

<sup>17</sup> Development within the Major centre zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

| Whitsunday Regional Council Planning Scheme – Part 6 – ~~November 2021~~ July 2017 (V4.01)

- (s) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

## 6.2.12 Medium impact industry zone code

### 6.2.12.1 Application

This code applies to assessable development:

- (a) within the Medium impact industry zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Medium impact industry zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.12.2 Purpose and overall outcomes

- (1) The purpose of the Medium impact industry zone code is to provide for medium impact industry uses. It may include non-industrial and business uses that support the Industrial activities where they do not compromise the long-term use of the land for industrial purposes. Activities considered appropriate in this zone are defined as medium impact industry in the schedule of definitions.
- (2) The purpose of the Medium impact industry zone code in the local government area is to provide for a wide range of Industry activities at a larger scale and higher intensity relative to the Low impact industry zone.
- (3) The purpose of the Medium impact industry zone code will be achieved through the following overall outcomes:
  - (a) uses in the zone are predominantly for low to medium intensity and low to medium impact Industry activities, including bulk landscape supplies, low impact industry, medium impact industry, research and technology industry, service industry and warehouse uses;
  - (b) development of ancillary Accommodation may be established only where directly supporting the ongoing Industry activities of the zone. These uses are limited to caretaker's accommodation;
  - (c) development of Business, Rural and Other activities, which are not ancillary but are compatible with Industry activities, may be established in the zone. These uses include, but are not limited to, agricultural supplies stores, hardware and trade supplies, offices, outdoor sales, showrooms, rural industries, transport depots, transport depots and utility installations. Such uses must be appropriately located and designed to ensure that they do not compromise the ongoing operation and viability of Industry activities<sup>18</sup>;
  - (d) development of limited Community activities, compatible with this zone may also be established. Such uses are limited to crematoriums, emergency services and funeral parlours;
  - (e) existing and planned Industry activities are protected from the intrusion of incompatible uses that may compromise or conflict with the primary use of premises for industry purposes;
  - (f) development provides for a range of lot sizes to cater for varying industry needs and user requirements;

<sup>18</sup> Development within the Medium impact industry zone may be requested to provide an Economic impact assessment report in accordance with PSP SC6.7 (Growth management).

Whitsunday Regional Council Planning Scheme – Part 6 – ~~November 2021~~ July 2017 (V4.01)

- (g) development has a predominantly low-rise built form that is sympathetic to the intended scale and character of the streetscape and surrounding area, ~~with a maximum building height of 15.0m above ground level;~~
- (h) Industry activities integrate with the locality by providing a high quality of built form and landscaping in keeping with the expectations of a modern, safe, and attractive industrial environment;
- (i) development ensures that uses and works for industrial purposes are located, designed and managed to maintain public health and safety, avoid significant adverse effects on the natural environment and minimise impacts on non-industrial land and sensitive uses;
- (j) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (k) Industry activities provide for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use<sup>19</sup>;
- (l) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~
- (m) development is provided with the full range of urban services to support industry and employment needs, including parks, reticulated water, sewerage, stormwater drainage, sealed roads, pathways, electricity and telecommunications infrastructure;
- (n) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (o) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

<sup>19</sup> Development within the Medium impact industry zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

Whitsunday Regional Council Planning Scheme – Part 6 – ~~November 2021~~ July 2017 (V4.01)

## 6.2.13 Mixed use zone code

### 6.2.13.1 Application

This code applies to assessable development:

- (a) within the Mixed use zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Mixed use zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.13.2 Purpose and overall outcomes

- (1) The purpose of the Mixed use zone code is to provide for a mixture of development that may include business, retail, residential, tourist accommodation and associated services, service industry and low impact uses.
- (2) The purpose of the Mixed use zone code in the local government area is to provide for an appropriate mix of uses that take advantage of and support the development of key mixed use activity areas.
- (3) The purpose of the Mixed use zone code will be achieved through the following overall outcomes:
  - (a) development provides for a range of activities that are compatible with the intent of the zone;
  - (b) Community and Other activities established in the zone are appropriately designed and located to assist in maintaining public health, contribute to the comfort and safety of residents and visitors and integrate with the built form and character of the zone. Such uses include community uses, emergency services, health care services and utility installations;
  - (c) the range, scale and intensity of Business, Recreation and Entertainment activities provided within this zone service the needs of surrounding residents and visitors, not compromising the role and function of existing centres within the region. These activities include but are not limited to food and drink outlets, offices, shops, indoor sport and recreation, bars, clubs, hotels, nightclub entertainment facilities, micro-breweries, coffee roasteries and tourist attractions;
  - (d) development provides for a range of Accommodation activities consistent with the mixed use environment intended in this zone. Such Accommodation activities include multiple dwellings, resort complexes, rooming accommodation and short-term accommodation;
  - (e) the scale, character and built form of development contributes to a high standard of amenity in keeping with the intended role and function of the particular precinct<sup>20</sup>;
  - (f) development incorporates a high standard of architecture, urban design and landscaping that creates attractive and functional buildings, streets and places;

<sup>20</sup> Development within the Mixed use zone may be requested to provide an Economic impact assessment report in accordance with PSP SC6.7 (Growth management).

- (g) development provides an active and articulated streetscape allowing for casual surveillance and pedestrian access from the street, with connectivity to surrounding land uses;
- (h) ~~unless otherwise specified in a local plan code or Table 6.2.13.2.1 (Maximum building heights in Mixed use zone),~~ development has a low to medium-rise built form that is compatible with the intended scale and character of the streetscape and surrounding area, ~~with a maximum building height of 12.0m above ground level;~~

**Table 6.2.13.2.1 – Maximum building heights in Mixed use zone**

| Mixed-use location      | Maximum building height |
|-------------------------|-------------------------|
| Airlie Beach Precinct A | 14m                     |
| Airlie Beach Precinct C | 24m                     |
| Airlie Beach Precinct F | 18m                     |
| Airlie Beach Precinct G | 14m                     |

- (i) development is located, designed and operated in a manner that does not unreasonably impact on the amenity of surrounding development, having regard to matters such as traffic, noise, lighting, waste, fumes, odours, hours of operation, privacy, overlooking and public health and safety;
- (j) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (k) development demonstrates an appropriate level of transport infrastructure is available and that development will not unreasonably interfere with the safe and efficient operation of the surrounding road network<sup>21</sup>;
- (l) development provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use;
- (m) development is provided with the full range of urban services, including reticulated water, sewerage, stormwater drainage, sealed roads, electricity and telecommunications infrastructure;
- (n) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (o) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected, and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

<sup>21</sup> Development within the Mixed use zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

## 6.2.14 Neighbourhood centre zone code

### 6.2.14.1 Application

This code applies to assessable development:

- (a) within the Neighbourhood centre zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Neighbourhood centre zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.14.2 Purpose and overall outcomes

- (1) The purpose of the Neighbourhood centre zone code is to provide for a small mix of land uses to service residential neighbourhoods. It includes small-scale convenience shopping, professional offices, community services and other uses that directly support the immediate community.
- (2) The purpose of the Neighbourhood centre zone code in the local government area is to provide for a limited range of small-scale Business and Community activities that support the basic convenience needs of local neighbourhoods.
- (3) The purpose of the Neighbourhood centre zone code will be achieved through the following overall outcomes:
  - (a) development provides for the convenience and day to day Business needs of localised residential catchments, with uses including small-scale food and drink outlets, offices and shops;
  - (b) Community, Industry and Other activities, such as child care centres, community uses, emergency services, service industries and utility installations, may be established in the zone where they are compatible with the amenity of surrounding residential development;
  - (c) development provides for a limited range of Accommodation activities, including caretaker's accommodation, dual occupancies and multiple dwellings where such uses are ancillary to and support the predominant business functions of the zone;
  - (d) Business and Community activities are of a small-scale and limited intensity to maintain and reinforce the role and function of higher order activity centres as the preferred location for Business activities in the region, as demonstrated in the Whitsunday hierarchy of centres;
  - (e) development of Business activities in the Neighbourhood centre zone includes consideration of the following:
    - (i) the function and role of existing Business activities in the zone is maintained<sup>22</sup>;
    - (ii) any commercial or retail component of development does not exceed 150m<sup>2</sup> GLA; and
    - (iii) site cover of the entire development does not exceed 50%;

<sup>22</sup> Development within the Neighbourhood centre zone may be requested to provide an Economic impact assessment report in accordance with PSP SC6.7 (Growth management).

- (f) development has a low-rise built form that is compatible with the intended scale and character of the streetscape and surrounding area, ~~with a maximum building height of 8.5m above ground level, or 10.0m above ground level where located on slopes exceeding 15%;~~
- (g) development incorporates a high standard of architecture, urban design and landscaping that creates attractive and functional buildings, streets and places;
- (h) development provides an active and articulated streetscape allowing for casual surveillance and pedestrian access from the street, with connectivity to surrounding land uses;
- (i) development is located, designed and operated in a manner that does not unreasonably impact on the amenity of surrounding development, having regard to matters such as traffic, noise, lighting, waste, fumes, odours, hours of operation, privacy, overlooking and public health and safety;
- (j) development provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use;
- (k) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~
- (l) development demonstrates an appropriate level of transport infrastructure is available and that development will not unreasonably interfere with the safe and efficient operation of the surrounding road network<sup>23</sup>;
- (m) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (n) development is provided with the full range of urban services, including reticulated water, sewerage, stormwater drainage, sealed roads, electricity and telecommunications infrastructure;
- (o) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (p) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

<sup>23</sup> Development within the Neighbourhood centre zone may be requested to provide a Traffic assessment report in accordance with PSP SC6.7 (Growth management).

## 6.2.15 Recreation and open space zone code

### 6.2.15.1 Application

This code applies to assessable development:

- (a) within the Recreation and open space zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Recreation and open space zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.15.2 Purpose and overall outcomes

- (1) The purpose of the recreation and open space zone code is to provide for a range of sporting, recreation, leisure, cultural and educational activities. It may provide for local, district and regional scale parks that serve the recreation needs of residents and visitors and may include areas for conservation. Areas, such as parks, playing fields and playgrounds, are generally accessible to the public, however, access may be limited in certain areas at certain times. When required to meet community needs, development may include built structures, such as shelters, amenity facilities, picnic tables, clubhouses, gymnasiums, public swimming pools and tennis courts and other infrastructure to support the activities, provide safe access and support the management of these essential built structures.
- (2) The purpose of the Recreation and open space zone code in the local government area is to provide for Recreation activities, open space and park functions and ancillary uses and infrastructure which are associated with the public use of those areas.
- (3) The purpose of the Recreation and open space zone code will be achieved through the following overall outcomes:
  - (a) development provides for a range of passive and active Recreation activities that provide for the recreational needs of residents and visitors, including indoor/outdoor sport and recreation and park uses. The zone accommodates both formal and informal Recreation activities, including playing fields, equestrian facilities, outdoor cultural activities, educational activities, public swimming pools and outdoor courts;
  - (b) development may provide for limited other Community and Entertainment activities where they provide support for the predominant Recreation activity. Such uses include community uses, emergency services, clubs and function facilities as well as further supporting infrastructure, such as amenities blocks, shelters, spectator stands and picnic tables. Lighting infrastructure may be established in the zone where it supports the ongoing safe, comfortable and efficient operation of Recreation activities;
  - (c) recreation and open space areas may be used for temporary or periodical Business activities, such as markets or outdoor entertainment events, where these uses are of a scale that can be reasonably accommodated by the existing recreation and open space facilities and do not unduly impact on the amenity and character of the surrounding area;
  - (d) to maintain the intended character and amenity of the zone, development integrates with and complements the streetscape and has a low-rise built form, ~~with a maximum building height of 8.5m above ground level, or 10.0m above ground level where located on slopes exceeding 15%;~~

- (e) development in the zone encourages personal safety and property security through the design of buildings and spaces, allowing for casual surveillance and the clear definition of public and private spaces;
- (f) the co-location and multiple use of sport and recreation fields and facilities by complementary Recreation activities is encouraged;
- (g) areas used for Recreation activities and open space complement and, where possible, are connected to other parts of the broader regional open space network, including land in the Environmental management and conservation zone;
- (h) development in the zone provides a high level of amenity and mitigates the potential for land use conflicts with existing and planned development in the locality;
- (i) existing and planned Recreation activities and open space areas are protected from the intrusion of incompatible land uses that may compromise or conflict with the primary use of the land for recreation and open space purposes;
- (j) foreshores provide high quality recreation areas and are protected from further encroachment by incompatible development;
- (k) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through location, design, operation and management;
- (l) development provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use;
- (m) development is provided with an appropriate level of services and infrastructure that maintains public health, avoids negative impacts on the natural environment and ensures the safety of buildings and works;
- (n) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (o) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

## 6.2.16 Rural zone code

### 6.2.16.1 Application

This code applies to assessable development:

- (a) within the Rural zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Rural zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.16.2 Purpose and overall outcomes

- (1) The purpose of the Rural zone code is to:
  - (a) provide for a wide range of rural uses, including cropping, intensive horticulture, intensive animal industries, animal husbandry, animal keeping and other primary production activities;
  - (b) provide opportunities for non-rural uses that are compatible with agriculture, the environment and the landscape character of the rural area, where they do not compromise the long-term use of the land for rural purposes; and
  - (c) protect and manage significant natural features, resources, and processes, including the capacity for primary production.
- (2) The purpose of the Rural zone code in the local government area is to provide for a wide range of Rural activities and a limited range of non-rural activities, which complement or provide a service to rural areas. Activities in rural areas are sustainably managed to protect, maintain and enhance the productivity, character, visual amenity and ecological sustainability of the area.
- (3) The purpose of the Rural zone code will be achieved through the following overall outcomes:
  - (a) development provides for a broad range of Rural activities, including animal husbandry, cropping, roadside stalls and wholesale nurseries, animal keeping, aquaculture, intensive animal industry, intensive horticulture, renewable energy facilities and rural industry, provided that adverse environmental and amenity impacts are avoided or appropriately managed;
  - (b) permanent Accommodation activities are limited to dwelling houses and caretaker's accommodation on existing lots. Home based businesses, nature-based tourism, Short-term accommodation (Dwelling), rural workers accommodation and tourist parks may also be established where the scale, intensity and nature of the use complements integrates with the rural landscape, Rural activities and promotes the sustainable use of rural land;
  - (c) Business, Industry, Recreation and Community activities that are compatible with a rural setting and support rural enterprise and community wellbeing are facilitated where they do not compromise the use of the land for Rural activities. Such uses include agricultural supply stores, veterinary services, bulk landscaping supplies, community uses, and emergency services and, where supporting the tourism industry, indoor sport and recreation, outdoor sport and recreation, environment facility, shop or food and drink outlet;
  - (d) non-rural activities are located, designed and operated to minimise conflicts with existing and future Rural activities on the surrounding rural lands;

Whitsunday Regional Council Planning Scheme – Part 6 – ~~November 2021~~ July 2017 (V4.01)

- (e) intensive Rural activities are not located adjacent to sensitive uses and are designed and operated to maintain the rural character and amenity of the zone;
- (f) development encourages the continued operation of existing agri-business and continued development of new agri-business opportunities;
- (g) development for extractive industry or a renewable energy facility is appropriately designed, operated and managed to minimise significant nuisance and environmental impacts on surrounding premises;
- (h) development does not alienate or fragment agricultural land for current or future productivity unless:
  - (i) there is an overriding need for the development in terms of public benefit; and
  - (ii) no other site is suitable for the particular purpose;
- ~~(i)~~ the built form of development in the zone integrates with and complements the predominant rural character and scale of the zone and sensitively responds to the environmental and topographical features of the landscape. ~~Development is not to occur on land with a slope greater than 15%;~~
- ~~(j)~~ to maintain the rural character and amenity of the locality, development of Business or Accommodation activities have a low-rise built form with a maximum building height of 8.5m above ground level, or 10.0m above ground level, where located on slopes exceeding 15%;
- ~~(j)~~(k) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- ~~(k)~~(l) development is provided with an appropriate level of services and infrastructure that maintains public health, avoids negative impacts on the natural environment and ensures the safety of buildings and works;
- ~~(l)~~(m) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (n) the safety and efficiency of existing and future infrastructure (including road, rail, telecommunications and electrical infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

## 6.2.17 Rural residential zone code

### 6.2.17.1 Application

This code applies to assessable development:

- (a) within the Rural residential zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Rural residential zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.17.2 Purpose and overall outcomes

- (1) The purpose of the Rural residential zone code is to provide for residential development on large lots where local government infrastructure and services may not be provided and where the intensity of residential development is generally dispersed.
- (2) The purpose of the Rural residential zone code in the local government area is to ensure that development is low density and semi-rural in nature, developed as a logical extension, infill or consolidation of existing rural residential zoned land. These areas occur on land considered unsuitable for agricultural production with Rural activities limited to small-scale activities that do not impact on the rural residential amenity of the zone.
- (3) The purpose of the Rural residential zone code will be achieved through the following overall outcomes:
  - (a) development provides for low density Accommodation activities, in the form of dwelling houses on a range of relatively large lots within a semi-rural setting. Home based businesses may be established in the zone, where the scale, intensity and nature of the activity does not disturb the rural residential character and amenity of the surrounding locality;
  - (b) Rural, Business and Community activities are limited to small-scale and low intensity uses that are compatible with the prevailing rural residential character and amenity of the zone. Such uses are limited to animal husbandry, cropping, roadside stalls, sales offices, community uses and emergency services;
  - (c) to maintain the low density character and rural residential amenity of the zone, development has a low-rise built form ~~with a maximum building height of 8.5m above ground level, or 10.0m above ground level where located on slopes exceeding 15%;~~
  - (d) the built form of development integrates with and complements the predominant rural residential character and scale of the zone and is sympathetic to the environmental and topographical features of the landscape;
  - (e) development for Accommodation activities adjacent to rural land does not interfere with the existing or ongoing use of the rural land for productive agricultural purposes;
  - (f) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;

| Whitsunday Regional Council Planning Scheme – Part 6 – ~~November 2021~~ July 2017 (V4.01)

~~(f)~~(g) development is provided with an appropriate level of services and infrastructure that maintains public health, avoids negative impacts on the natural environment and ensures the safety of buildings and works; and

~~(g)~~(h) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

## 6.2.18 Special industry zone code

### 6.2.18.1 Application

This code applies to assessable development:

- (a) within the Special industry zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Special industry zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.18.2 Purpose and overall outcomes

- (1) The purpose of the Special industry zone code is to provide for specialised industry uses, including those that are noxious and hazardous. It may include non-industrial and business uses that support the Industrial activities where they do not compromise the long-term use of the land for industrial purposes. Activities considered appropriate in this zone are defined as special industry in the schedule of definitions;
- (2) The purpose of the Special industry zone in the local government area is to provide for existing and future large scale, high intensity industry, which has the potential to significantly impact sensitive uses;
- (3) The purpose of the Special industry zone code will be achieved through the following overall outcomes:
  - (a) uses in the zone are predominantly for higher intensity, higher impact Industry activities that have the potential to generate significant off-site impacts, including high impact industry and special industry uses;
  - (b) development of limited Accommodation, Community and Other activities compatible with this zone may also be established. These uses are limited to caretaker's accommodation, emergency services, substations, telecommunications facilities and utility installations. Such uses must be appropriately located and designed to ensure that they do not compromise the ongoing operation and viability of Industry activities<sup>24</sup>;
  - (c) development provides for a range of lot sizes, including an appropriate proportion of larger lots to cater for larger format and land consumptive Industry activities;
  - (d) development has a built form that is compatible with the intended scale and character of the streetscape and surrounding area whilst accommodating industry operating requirements, ~~with a maximum building height of 20.0m above ground level~~;
  - (e) Industry activities integrate with the locality by providing a high quality of built form and landscaping in keeping with the expectations of a modern, safe, and attractive industrial environment;
  - (f) the viability of both existing and future noxious and hazardous Industry activities are protected from the intrusion of incompatible uses;
  - (g) uses and works for noxious and hazardous industrial purposes are located, designed and managed to maintain safety to people, avoid significant adverse effects on the natural environment and minimise impacts on adjacent

<sup>24</sup> Development within the Special impact industry zone may be requested to provide an Economic impact assessment report in accordance with PSP SC6.7 (Growth management).

non-industrial land, having regard to the inherent risks associated with these types of industries;

- (h) Accommodation activities are not located within close proximity to the Industry activities in the zone;
- (i) any sensitive uses located in the Special industry zone do not compromise the viability of both existing and future Industry activities;
- (j) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;
- (k) Industry activities provide for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use<sup>25</sup>;
- (l) development is provided with the full range of urban services to support industry and employment needs including reticulated water, sewerage, stormwater drainage, sealed roads, pathways, electricity and telecommunications infrastructure;
- (m) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (n) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

<sup>25</sup> Development within the Special industry zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

## 6.2.19 Tourist accommodation zone code

### 6.2.19.1 Application

This code applies to assessable development:

- (a) within the Tourist accommodation zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Tourist accommodation zone code by the tables of assessment in Part 5 (Tables of assessment).

### 6.2.19.2 Purpose and overall outcomes

- (1) The purpose of the Tourist accommodation zone code is to provide for short-term accommodation in locations where there is a strong focus on tourist attractions supported by community uses and small-scale services and facilities.
- (2) The purpose of the Tourist accommodation zone code in the local government area is to provide development that meets the needs and expectations of visitors to the Region through the co-location of a range of Accommodation and Business activities.
- (3) The purpose of the Tourist accommodation zone code will be achieved through the following overall outcomes:
  - (a) development provides for Accommodation activities, primarily in the form of relocatable home parks, resort complexes, rooming accommodation, short-term accommodation and tourist parks, that promote variety in visitor accommodation;
  - (b) development facilitates opportunities for establishing tourist facilities and services in urban, rural, environmental or coastal areas to complement tourist accommodation and enhance the attractiveness of tourist areas;
  - (c) development may provide for limited Business, Community and Other activities, including food and drink outlets, shops, community uses, emergency services and utility installations, which:
    - (i) directly support the day to day needs of the immediate visitors and residential community;
    - (ii) are small-scale and low intensity;
    - (iii) are compatible with the local residential character and amenity of the area;
    - (iv) wherever possible, are co-located with similar activities within the zone;
    - (v) are accessible to the population they serve and are located on the major road network, rather than local residential streets;
    - (vi) do not undermine the viability of nearby centres<sup>26</sup>;
    - (vii) do not have a significant detrimental impact on the amenity of surrounding residents, having regard to hours of operation,

<sup>26</sup> Development within the Tourist accommodation zone may be requested to provide an Economic impact assessment report in accordance with PSP SC6.7 (Growth management).

generation of odours, noise, waste products, dust, traffic, electrical interference, lighting and visual impacts;

- (d) to maintain the low intensity character and residential amenity of the zone, development has a low-rise built form, ~~with a maximum building height of 8.5m above ground level, or 10.0m above ground level where located on slopes exceeding 15%;~~
- (e) development enhances and protects the unique local, scenic, environmental, cultural or historic character of the locality;
- (f) development is facilitated where it has a direct relationship with local scenic, environmental, recreational, cultural or historic character;
- (g) development is designed and located in a manner which makes a positive contribution to the streetscape and is sympathetic to the intended scale and character of surrounding development;
- (h) development incorporates a high level of residential amenity, personal health and safety and protection for property;
- (i) development is located, designed and operated in a manner that does not unreasonably impact on the amenity of surrounding premises, having regard to matters such as traffic, noise, lighting, waste, fumes, odours, hours of operation, privacy, overlooking and public health and safety;
- (j) development located close to centres, community facilities and open space provides for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use;
- (k) vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~
- (l) development demonstrates an appropriate level of transport infrastructure is available and will not unreasonably interfere with the safe and efficient operation of the surrounding road network<sup>27</sup>;
- (m) development is reflective of, and responsive to, the environmental constraints of the land;
- (n) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) that form the basis of the tourist attraction. Any unavoidable impacts are minimised through sensitive location, design, operation and management;
- (o) development is provided with an appropriate level of services and infrastructure that maintains public health, avoids negative impacts on the natural environment and ensures the safety of buildings and works;
- (o) development is located and designed to maximise the efficient extension and safe operation of infrastructure; and
- (p) the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is

<sup>27</sup> Development within the Tourist accommodation zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

| Whitsunday Regional Council Planning Scheme – Part 6 – ~~November 2021~~ July 2017 (V4.01)

protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

## **6.2.20 Waterfront and marine industry zone code**

### **6.2.20.1 Application**

This code applies to assessable development:

- (a) within the Waterfront and marine industry zone as identified on the zoning maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Waterfront and marine industry zone code by the tables of assessment in Part 5 (Tables of assessment).

### **6.2.20.2 Purpose and overall outcomes**

- (1) The purpose of the Waterfront and marine industry zone code is to provide for waterfront, marine and business industry uses that require land near, or adjoining the waterfront. It may include non-industrial and business uses that support the Industrial activities, where they do not compromise the long-term use of the land for industrial purposes.
- (2) The purpose of the Waterfront and marine industry zone code in the local government area is to provide a dedicated area for the establishment of waterfront and marine Industry activities as well as a limited range of non-industry activities that are compatible.
- (3) The purpose of the Waterfront and marine industry zone code will be achieved through the following overall outcomes:
  - (a) the Waterfront and marine industry zone is predominantly used for marine industry uses, including ship and boat building, marine equipment manufacturing, marine and maritime service providers, storage, marine vessel refitting and marine vessel maintenance operations;
  - (b) other Industry activities may be established in the zone where they require access to a navigable waterway or provide support or complementary services to marine industry uses;
  - (c) development of ancillary Accommodation and Business activities may be established only where directly supporting the ongoing Industry activities of the zone. These uses are limited to caretaker's accommodation, food and drink outlets, outdoor sales and service station;
  - (d) Rural and Other activities may also be established in the zone where they are ancillary to and directly support the ongoing viability and operation of marine industry uses. These uses include rural industries (including wholesale and distribution of seafood products), aquaculture, landings and port services;
  - (e) compatible non-maritime uses should be co-located within the site allowing for good pedestrian access and permeability;
  - (f) the zone is protected from the intrusion of incompatible land uses that may compromise or conflict with the primary use of premises for Industry activities;
  - (g) the first stage of development incorporates a single integrated area for marine services and repair infrastructure for use by all existing and future operators located in the zone, comprising of:
    - (i) a canal basin;

- (ii) a boat ramp into the canal basin;
- (iii) a straddle lift for vessels up to 30m in length;
- (iv) hardstand area (with a minimum area of approximately 2 hectares);
- (v) equipment for the removal, treatment and disposal of sewage and other solid and liquid waste from vessels, including bilge water;
- (vi) equipment for the removal and storage of fuel from vessels;
- (vii) a vessel wash down facility designed and constructed to industry best practice standards;
- (viii) a location for an enclosed pressure sand blasting and painting facility; and
- (ix) a waste treatment system for the containment, treatment and removal of waste materials from blasting, painting and surface coating activities. The waste treatment system must be located so that influx of tidal waters is prevented;

~~(h)~~ development has a built form that meets the functional needs of marine industry uses and is also sympathetic to the non-urban character and amenity of the surrounding area, ~~with a maximum building height above ground level of:~~

- ~~(i)~~
- ~~(i)~~ 20.0m for buildings and structures used for the manufacturing, servicing or repair of vessels; and
- ~~(i)~~
- ~~(i)(h)~~ 12.5m for all other buildings and structures;

~~(k)(i)~~ development incorporates high quality urban design and landscaping to create an attractive, functional and legible waterfront industry precinct;

~~(l)(i)~~ development ensures that uses and works for industrial purposes are located, designed and managed to maintain public health and safety, avoid significant adverse effects on the natural environment and minimise impacts on non-industrial land and sensitive uses;

~~(m)(k)~~ development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance (including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation) through sensitive location, design, operation and management;

~~(n)(l)~~ Industry activities provide for pedestrian, bicycle and vehicular movement networks that maximise connectivity, safety, permeability and ease of movement in a manner that encourages public transport accessibility and use<sup>28</sup>;

~~(o)(m)~~ vehicle movement networks are provided that facilitate convenient connections to centres and Community activities, ~~in a manner that relieves traffic pressure on the Bruce Highway and Shute Harbour Road through the use of alternative routes;~~

~~(p)(n)~~ development is provided with the full range of urban services to support industry and employment needs, including parks, reticulated water,

<sup>28</sup> Development within the Waterfront and marine industry zone may be requested to provide a Traffic impact assessment report in accordance with PSP SC6.7 (Growth management).

| Whitsunday Regional Council Planning Scheme – Part 6 – ~~November 2021~~ July 2017 (V4.01)

sewerage, stormwater drainage, sealed roads, pathways, electricity and telecommunications infrastructure;

~~(q)(o)~~ development is located and designed to maximise the efficient extension and safe operation of infrastructure; and

~~(r)(p)~~ the safety and efficiency of existing and future infrastructure (including road, rail, pipelines, telecommunications and transmission infrastructure) is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure.

## **Part 7 Local Plans**

### **7.1 Preliminary**

- (1) Local plans address matters at the local or district level and may provide more detailed planning for the zones.
- (2) Local plans are mapped and included in Schedule 2 (Mapping).
- (3) A precinct may be identified for part of a local plan.
- (4) The categories of development and assessment for development in a local plan are in Part 5 (Tables of assessment).
- (5) Assessment benchmarks for local plans are contained in a local plan code.
- (6) Each local plan code identifies the following:
  - (a) the application of the local plan code;
  - (b) the purpose of the local plan code;
  - (c) the overall outcomes that achieve the purpose of the local plan code;
  - (d) the purpose and overall outcomes for each precinct;
  - (e) the performance outcomes that achieve the overall outcomes of the local plan code;
  - (f) the acceptable outcomes that achieve the performance outcomes of the local plan code; and
  - (g) the performance and acceptable outcomes of a precinct that achieve the overall outcomes of the precinct.
- (7) The following are the local plan codes for the Planning Scheme:

| [\(a\) Airlie Beach local plan;](#)  
[\(b\) Bowen local plan; and](#)  
~~(a)(c)~~ [Hamilton Island local plan.](#)

## **7.2 Local plan codes**

### **7.2.1 Airlie Beach local plan code**

#### **7.2.1.1 Application**

This code applies to assessable development within the Airlie Beach local plan area as identified on the Local plan maps contained within Schedule 2 (Mapping).

Editor's note – To the extent of any inconsistency between the Airlie Beach local plan code and any other part of the Planning Scheme, the Airlie Beach local plan code prevails.

#### **7.2.1.2 Purpose and overall outcomes**

(1) The purpose of the Airlie Beach local plan code is to provide a development framework that:

- (a) promotes the unique attributes of the locality;
- (b) facilitates diverse Accommodation, Business and Entertainment activities;
- (c) cultivates a hub of activity, social interaction, quality public space and placemaking; and
- (d) contributes to the vitality and experience of Airlie Beach, as a tropical coastal tourist destination;

(2) The purpose of the Airlie Beach local plan code will be achieved through the following overall outcomes:

- (a) The character of Airlie Beach, which includes its vital, small town scale, tropical climate, pedestrian neighbourhoods, compact Main Street form, blue views to the sea and green views to Airlie Hill, visually penetrable buildings and heights and lush landscape elements, is maintained;
- (b) development reduces visual bulk of buildings by utilising podiums, awnings, articulation, materials, colours and landscaping to create visual interest;
- (c) development is climate responsive and promotes a 'tropical sense of place', incorporating high quality, adaptable design, that is sensitive to the surrounding natural landscape, open spaces and pedestrian routes;
- (d) semi-public spaces, streets, laneways or other public spaces are designed to:
  - (i) ensure public access is available 24 hours a day; and
  - (ii) create a safe environment that maximises casual surveillance and discourages anti-social behaviour;
- (e) placemaking, wayfinding and landscaping are utilised to promote a strong sense of place, encourage social interaction and activity, guide navigation throughout Airlie Beach and delineate boundaries between public, semi-public and private spaces;
- (f) development incorporates permeable pedestrian and cycle movement from the Bicentennial Walkway through to the Whitsunday Transit Terminal and from the Foreshore through Precinct A, Precinct B and Precinct C to Waterson Way via existing and future laneways and pedestrian routes;
- (g) pedestrian focused environments are established along Canal Street, Coconut Grove, Main Street and internal road networks of Precinct C with:

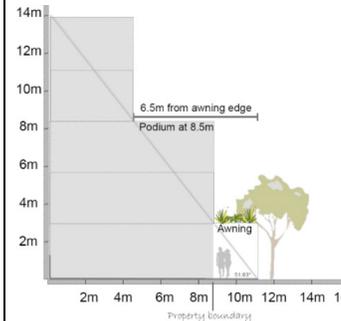

Whitsunday Regional Council Planning Scheme – Part 9 – November 2021 (V4.1)

- (i) buildings built to the street alignment at ground level;
  - (ii) predominantly active uses at ground level;
  - (iii) façades articulated to ensure large, blank walls are not created;
  - (iv) awnings covering adjoining pedestrian footpaths along the full length of buildings;
  - (v) driveways avoided where alternate access points are available; and
  - (vi) undercroft car parking or car parking located to the rear or side of buildings; and
  - (h) development fronting Waterson Way ensures a safe and comfortable pedestrian experience, considering future expansion of Waterson Way as a double lane major collector route bypassing Airlie Beach;
  - (i) car parking is located away from the primary road frontage or screened, at rates that recognise pedestrian and cycle accessibility and cross utilisation within Airlie Beach;
  - (j) car parking demand is met efficiently, considering linkages and alternating peak demand between uses, with payments for parking in lieu considered in Precinct A and B where required parking cannot be provided on site;
- Editor's note – Council is developing a precinct parking plan to inform payments per car park in lieu of development unable to provide on-site and timing of car park delivery. If applicable, contact Council for pre-lodgement advice to determine suitability.
- (k) redevelopment in the Main Street and or adjoining the Foreshore is encouraged at higher density to account for existing constraints and encourage further revitalisation, enhancement of existing laneways and development of future laneways;
  - (l) development in Precinct C incorporates an internal road layout, which provides rear of lot access to properties in Precinct B and a vehicular connection across Airlie Creek;
  - (m) development in Precinct C and Precinct D is sited, orientated and designed to create an integrated, permeable and landscaped area with an active public plaza provided in each precinct to create a social hub and focal point of activity; and
  - (n) development in Precinct D incorporates a luxury hotel, including function facilities, designed to cater for a premium tourism market.

**7.2.1.3 Assessment benchmarks**

**Table 7.2.1.3.1: Benchmarks for assessable development**

| <b>Performance Outcomes</b>   |                                                                                                                                                                                                                                                                | <b>Acceptable Outcomes</b> |                                                                                                                                                                                                                                                                                               |

## **7.2.2 Bowen local plan code**

### **7.2.2.1 Application**

This code applies to assessable development within the Bowen local plan area as identified on the Local plan maps contained within Schedule 2 (Mapping).

Editor's note – To the extent any inconsistency between the Bowen local plan code and any other part of the Planning Scheme, the Bowen local plan code prevails.

### **7.2.2.2 Purpose and overall outcomes**

(1) The purpose of the Bowen local plan code is to provide a development framework that facilitates:

- (a) a mixed use marine hub, including marine education, marine industry, diverse business activities and high quality accommodation product, designed in a manner that avoids conflicts between uses in the marina;
- (b) development that contributes to, rather than competes with, the Bowen CBD;
- (c) marina and foreshore development, which contributes to the vitality and experience of the local plan area incorporating revitalized spaces, high quality landscaping and transport options connected to Bowen Beaches and Bowen CBD; and
- (d) a mix of uses and high quality public space areas, which are designed and operated to maximise ocean views and marina access.

Note - Development within the Bowen local plan area may be requested to provide a Structure plan in accordance with PSP SC6.7.5 (Structure plan).

(2) The purpose of the Bowen local plan code will be achieved through the following overall outcomes:

#### **Precinct A: Bowen Foreshore and Starboard Drive**

- (a) development provides a mix of Business, Entertainment and Accommodation activities that complement existing uses within the Bowen CBD;
- (b) Accommodation activities provide for higher density living opportunities above the street level to facilitate active frontages at the street level, contribute to the vibrancy of the local plan area and enhance the development potential of the land;
- (c) development provides active and open frontages adjoining Santa Barbara Parade, Herbert Street, Starboard Drive and recreation areas;
- (d) development design encourages pedestrian and cycle movement around the precinct and facilitates connectivity between precincts and into wider Bowen;
- (e) multi-storey development reduces the bulk of built form through setbacks, podiums, façade articulation, variation in the building footprint, variation in lower footprint and use of natural materials, colours, ground level plantings and vertical landscaping;
- (f) placemaking elements, consistent Bowen themed signage, maps, universal symbols and landscaping are utilised at key locations to guide wayfinding that highlights public plazas, attractions and amenities;

**Precinct B: Henry Darwen Drive**

- (g) development activates Henry Darwen Drive with a mix of low intensity, marine oriented:
  - i. Industry activities;
  - ii. Educational establishment;
  - iii. Port services;
  - iv. Recreation Activities; and
  - v. Bar, Club, Shop, Food and Drink or Offices that support uses within the other Precincts;
- (h) signage, pathways and landscaped connections facilitate efficient pedestrian and cycle movement throughout the local plan area and into Bowen CBD;
- (i) development incorporates semi-public or, where appropriate, public spaces adjoining water frontages;
- (j) development on the Recreation and open space zone land and Community facilities zone land is appropriately designed to be self-contained, responding to the disconnect from the Bowen CBD, and capitalising on the proximity to the water; and
- (k) development facilitates the public activation of Henry Darwen Drive;

**Precinct C: Bowen marine industry**

- (l) development includes the provision of a regionally significant Marine industry hub, incorporating relevant supporting and ancillary functions;
- (m) Industrial activities are designed and sited to mitigate impacts on sensitive land uses outside of the precinct, incorporating landscaping, lighting, fencing and operational controls, which also improve the character of the Marina;
- (n) sensitive land uses are not located in the precinct to avoid conflict with the marine industry uses and supporting activities;
- (o) access and manoeuvring for heavy vehicles is safe and avoids conflicts with vehicle and pedestrian movement, and is appropriately linked with the surrounding heavy vehicle network;
- (p) development on the Open space zone land and Community facilities zone land is appropriately designed to be self-contained, responding to the disconnect from the Bowen CBD, and capitalising on the proximity to the water; and
- (q) water access for boats is safe and avoids conflicts with boats in the Marina.

**7.2.2.3 Assessment Benchmarks**

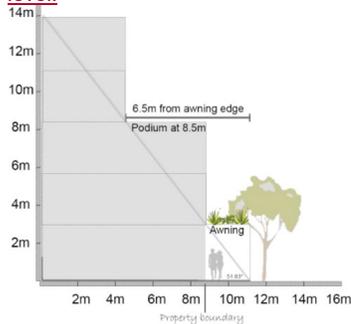

**Table 7.2.2.3.1 Benchmarks for assessable development**

### **7.1.17.2.3 Hamilton Island local plan code**

#### **7.1.1.17.2.3.1 Application**

This code applies to acceptable and assessable development within the Hamilton Island local plan as identified on the [zoningLocal plan](#) maps contained within Schedule 2 (Mapping).

Note – Applicants should seek guidance from Hamilton Island Enterprises prior to lodging a development application.

Editor's note – To the extent of any inconsistency between the Hamilton Island local plan code and any other part of the Planning Scheme, the Hamilton Island local plan code prevails.

#### **7.1.1.27.2.3.2 Purpose and overall outcomes**

- (1) The purpose of the Hamilton Island local plan code is to provide a development framework that facilitates growth to sustain and strengthen the tourist centre of Hamilton Island, while retaining its valuable natural assets.
- (2) The purpose of the Hamilton Island local plan code will be achieved through the following overall outcomes:
  - (a) Hamilton Island provides for an integrated tourist resort community, comprising Hamilton and Dent Islands;
  - (b) Dent Island functions as an integrated part of Hamilton Island;
  - (c) Dent Island provides low impact, small scale resort Accommodation and Recreational activities, which is less intensively developed than Hamilton Island;
  - (d) Hamilton Island's role and use as an offshore gateway to the Whitsunday Islands is maintained and enhanced;
  - (e) development does not compromise the ongoing operation of existing tourist facilities and attractions with uses contributing to the vitality and experience of Hamilton Island as a tourist destination, residential community and a cultural focal point;
  - (f) development provides for a cluster of appropriately located low and low-medium density Accommodation activities in both traditional neighbourhood and mixed use formats, providing for and supporting the residential and tourist function of the Island, optimising premium hillside views to the ocean and maintaining the privacy of existing residential sites;
  - (g) development is located on ridgelines and vegetated gullies to remain generally recessive through existing vegetation and foreshore features as viewed from surrounding marine waters by way of suitable aesthetic building design, treatments and colours;
  - (h) development for Business, Entertainment, Recreation activities provide for both resident and visitor needs to support day and night time economies. Activities are established where they are compatible with the character and amenity of surrounding development, optimise public accessibility to, and visibility of, waterfront areas and natural features or support marina functions and provide services to boats and boat users;

Whitsunday Regional Council Planning Scheme – Part 7 – July 2017 (V4.0)

- (i) development of Community, Industry and Other activities may be established where they support tourist, marina or aviation functions and services and are compatible with the scale, nature, character and amenity of surrounding development;
- (j) the character and individual identity of each development, evident in the style of buildings, landscaping and views to, and from, the surrounding waterbodies and natural features/landscapes is maintained;
- (k) development incorporates a high standard of architecture, urban design and landscaping that creates attractive and functional buildings, streets and places;
- (l) development provides for a built form that is predominately low-rise and compatible in theme, scale and character with the existing or desired form of development within the Island;
- (m) development provides for an architectural character, which reflects an open and relaxed lifestyle centred on the outdoors that is designed to be responsive to the tropical maritime climate and environment;
- (n) development provides and maintains a high level of residential and visitor amenity;
- (o) development is linked by a series of circulation and open space networks that are designed to provide pedestrian, cyclists and other resort transport modes with direct, integrated, safe and pleasant access to centres, waterfront, marina and recreation activities;
- (p) development is located, designed and operated in a manner that does not unreasonably impact on the amenity of surrounding premises, having regard to matters, such as traffic, noise, lighting, waste, fumes, odours, hours of operation, privacy, overlooking and public health and safety;
- (q) the tourism and recreation significance and the environmental and landscape values of Hamilton Island are recognised and protected with the accessibility of the surrounding marine and national parks (or other areas of conservation or scenic value) maintained for visitors and residents;
- (r) development avoids or mitigates any adverse impacts on areas of cultural heritage significance or environmental significance, including creeks, gullies, waterways, wetlands, coastal areas, habitats and vegetation, through sensitive location, design, operation and management;
- (s) development is provided with the full range of urban services, including reticulated water, sewerage, stormwater drainage, sealed roads, electricity and telecommunications infrastructure;
- (t) development is located and designed to maximise the efficient extension and safe operation of infrastructure;
- (u) the safety and efficiency of existing and future infrastructure is protected and the amenity and safety of development is not adversely affected by proximity to such infrastructure; and
- (v) risks to people and property as a result of bushfire, coastal and landslide hazards are considered. Development should only be carried out in hazard areas where it is demonstrated that impacts are suitably avoided and managed.

## Part 8 Overlays

### 8.1 Preliminary

- (1) Overlays identify areas in the Planning Scheme that reflect state and local level interests and that have one or more of the following characteristics:
  - (a) there is a particular sensitivity to the effects of development; or
  - (b) there is a constraint on land use or development outcomes; or
  - (c) there is the presence of valuable resources; or
  - (d) there are particular opportunities for development.
- (2) Overlays are mapped and included in Schedule 2 (Mapping).
- (3) The changed category of development or assessment, if applicable, for development affected by an overlay are in Part 5 (Tables of assessment).
- (4) Some overlays may be included for information purposes only. This should not result in a change to the category of development or assessment or any additional assessment benchmarks.
- (5) Assessment benchmarks for an overlay may be contained in one or more of the following:
  - (a) a map for an overlay; or
  - (b) a code for an overlay; or
  - (c) a zone code; or
  - (d) a local plan code; or
  - (e) a development code.
- (6) Where development is proposed on premises partly affected by an overlay, the assessment benchmarks for the overlay only relates to the part of the premises affected by the overlay.
- (7) The overlays for the Planning Scheme are:
  - (a) Acid sulfate soils;
  - (b) Agricultural land;
  - (c) Airport environs;
  - ~~(d)~~ (d) Biodiversity, waterways and wetlands;
  - ~~(e)~~ (e) Building heights;
  - ~~(d),(f)~~ (d),(f) Bushfire hazard;
  - ~~(e),(g)~~ (e),(g) Coastal environment hazard;
  - ~~(f)~~ (f) Environmental significance;

(h) Extractive resources;

(i) Flood hazard;

(j) Heritage;

| (k) Infrastructure; and

| (l) Landslide hazard; ~~and~~

| ~~(m) Waterways and wetlands.~~

## 8.2 Overlay codes

### 8.2.1 Acid sulfate soils overlay code

#### 8.2.1.1 Application

This code applies to accepted and assessable development:

- (a) subject to the Acid sulfate soils overlay map contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Acid sulfate soils overlay code by the tables of assessment in Part 5 (Tables of assessment).

#### 8.2.1.2 Purpose and overall outcomes

- (1) The purpose of the Acid sulfate soils overlay code is to ensure that the generation, or release, of acid and associated metal contaminants from acid sulfate soils does not have significant adverse effects on the natural environment, built environment, infrastructure or human health.
- (2) The purpose of the Acid sulfate soils overlay code will be achieved through the following overall outcomes:
  - (a) development ensures that the release of acid and associated metal contaminants into the environment is avoided by either:
    - (i) not disturbing acid sulfate soils when excavating or otherwise removing soil or sediment, extracting groundwater or filling land; or
    - (ii) treating and, if required, undertaking ongoing management of any disturbed acid sulfate soils and drainage waters.

#### 8.2.1.3 Assessment benchmarks

**Table 8.2.1.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes                          |                                                                                                                                                                                                                                                 | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                               |
|-----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Avoidance or mitigation of acid sulfate soils |                                                                                                                                                                                                                                                 |                     |                                                                                                                                                                                                                                                                                                                                               |
| <b>PO1</b>                                    | Where acid sulfate soils are identified, development:<br>(a) does not disturb acid sulfate soils; or<br>(b) is managed to avoid or minimise the release of acid and metal contaminants, where disturbance of acid sulfate soils is unavoidable. | <b>AO1.1</b>        | Acid sulfate soils are:<br>(a) not identified on site; or<br>(b) avoided or managed in accordance with the Queensland Acid Sulfate Soils Technical manual (Queensland Government, 2014).<br><br>Note – This may be demonstrated by undertaking an Acid sulfate soils assessment report in accordance with PSP SC6.2 (Environmental features). |

**8.2.2 Agricultural land overlay code**

**8.2.2.1 Application**

This code applies to accepted and assessable development:

- (a) subject to the Agricultural land overlay map contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Agricultural land overlay code by the tables of assessment in Part 5 (Tables of assessment).

**8.2.2.2 Purpose and overall outcomes**

- (1) The purpose of the Agricultural land overlay code is to ensure that agricultural land is protected from development that may lead to its alienation, fragmentation or diminished productivity.
- (2) The purpose of the Agricultural land overlay code will be achieved through the following overall outcomes:
  - (a) agricultural land is used for Rural activities;
  - (b) conflict between Rural activities and sensitive uses is avoided;
  - (c) development avoids adverse impacts on agricultural land from land degradation and stormwater runoff; and
  - (d) the stock route network is protected.

**8.2.2.3 Assessment benchmarks**

**Table 8.2.2.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes                                |                                                                                                                                  | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                                                   |

### 8.2.3 Airport environs overlay code

#### 8.2.3.1 Application

This code applies to accepted and assessable development:

- (a) subject to the Airport environs overlay map contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Airport environs overlay code by the tables of assessment in Part 5 (Tables of assessment).

#### 8.2.3.2 Purpose and overall outcomes

- (1) The purpose of the Airport environs overlay code is to protect the safety, efficiency and operational integrity of the Region’s airports and associated aviation facilities.
- (2) The purpose of the Airport environs overlay code will be achieved through the following overall outcomes:
  - (a) development does not create incompatible intrusions, or compromise aircraft safety in operational airspace;
  - (b) development does not adversely affect the functioning of aviation facilities;
  - (c) development avoids increasing risk to public safety in public safety areas;
  - (d) development is compatible with forecast levels of aircraft noise within the 20 ANEF contour and greater (as defined by Australian Standard 2021-2000 Acoustics – aircraft Noise intrusion – Building siting and construction (AS 2021) as adopted 7 July 2000); and
  - (e) sensitive land uses and other incompatible activities are appropriately located and designed, to not impact on airport operations.

#### 8.2.3.3 Assessment benchmarks

**Table 8.2.3.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes                    |                                                                                                                              | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                |

Note - only considers aircraft noise impacts on indoor spaces specifically, AS 2021 should be referred to by those seeking additional background information.

## **8.2.4 Biodiversity, waterways and wetlands overlay code**

### **8.2.4.1 Application**

This code applies to accepted and assessable development:

- (a) subject to the Biodiversity, waterways and wetlands maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Biodiversity, waterways and wetlands overlay code by the tables of assessment in Part 5 (Tables of assessment).

### **8.2.4.2 Purpose and overall outcomes**

- (1) The purpose of the Biodiversity, waterways and wetlands overlay code is to ensure that:
  - (a) matters of National and State environmental significance including vegetation, wetlands and waterways are protected, maintained, enhanced or rehabilitated;
  - (b) development in, or adjacent to, wetlands is planned, designed, constructed and operated to prevent the loss, or degradation of, the wetlands and their environmental values; and
  - (c) ecological connectivity and habitat extent are maintained or enhanced.
- (2) The purpose of the Biodiversity, waterways and wetlands overlay code will be achieved through the following overall outcomes:
  - (a) matters of environmental significance are maintained, protected or rehabilitated;
  - (b) development protects known populations and supporting habitat of:
    - (i) matters of National environmental significance, as listed in the *Environment Protection and Biodiversity Conservation Act 1999*;
    - (ii) endangered, vulnerable and near threatened flora and fauna species, as listed in the *Nature Conservation Act 1992*; and
    - (iii) regulated vegetation protected under the *Vegetation Management Act 1999*;
  - (c) development is avoided within areas of environmental significance;
  - (d) where development cannot be avoided, development:
    - (i) protects and establishes appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
    - (ii) ensures that adverse impacts on areas of environmental significance are minimised through design, siting, operation, management and mitigation measures;
    - (iii) does not cause adverse impacts on the integrity and quality of water in upstream or downstream catchments, including declared fish habitat areas and the Great Barrier Reef World Heritage Area;

- (iv) protects and maintains ecological and hydrological functions of waterways, wetlands, waterway corridors and declared fish habitat areas;
- (v) the health and resilience of biodiversity is maintained or enhanced to support ecological integrity and biodiversity values of the Whitsunday Region;
- (vi) rehabilitates degraded areas to provide improved habitat condition, connectivity, function and extent; and
- (vii) protects areas of environmental significance from weeds, pests and invasive species;
- (e) development is located, designed and managed to avoid or mitigate adverse impacts on ecological systems and processes;
- (f) ecological restoration enhances degraded sites where appropriate; and
- (g) development ensures that ~~viable~~ connectivity is maintained or enhanced between flora and fauna identified as matters of environmental significance.

Editor's note—PSP SC6.2 Environmental Features Planning Scheme Policy provides advice and guidance for achieving certain outcomes of this code, including guidance for the preparation of an Ecological assessment report and a Vegetation management plan.

**8.2.4.3 Assessment benchmarks**

**Table 8.2.4.3.1 Benchmarks for accepted and assessable development**

| <u>Performance Outcomes</u> |                                                                                                                                                                                               | <u>Acceptable Outcomes</u> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

**8.2.5 Building heights overlay code**

**8.2.5.1 Application**

This code applies to accepted and assessable development:

- (a) subject to the Building heights overlay map contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Building heights overlay code by the tables of assessment in Part 5 (Tables of assessment).

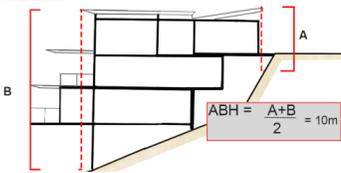

**8.2.5.2 Purpose and overall outcomes**

- (1) The purpose of the Building heights overlay code is to ensure that development within the Region meets the expectations of amenity and building height limits for each zone and use type; and
- (2) The purpose of the Building heights overlay code will be achieved through the following overall outcomes:
  - (a) development is generally in accordance with the maximum building heights identified for specific local plan codes, zone codes and building classes; and
  - (b) development on steep slopes is sited and designed to closely follow the natural contours of the land and utilises landscaping and screening to minimise the visibility of the underside of the building, mechanical equipment, support poles and air conditioning components.

**8.2.5.3 Assessment benchmarks**

**Table 8.2.5.3.1 Benchmarks for accepted and assessable development**

| <u>Performance Outcomes</u> |                                                                                                                                                              | <u>Acceptable Outcomes</u> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Building heights</b>     |                                                                                                                                                              |                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>PO1</b>                  | <u>The height of a building does not unduly:</u><br><u>(a) overshadow adjoining dwellings; or</u><br><u>(b) dominate the intended streetscape character.</u> | <b>AO1.1</b>               | <u>Development on a premises with slope less than 25% and within the Bowen, Hamilton Island or Airlie Beach Local Plan areas</u> <u>Precinct does not exceed the applicable precinct building height specified in Table 8.2.5.3.2.</u><br><br><u>Note – Where a conflict occurs between QDC MP1.1; MP1.2; or MP1.3 and the Building heights overlay code, this code prevails.</u><br><br><u>Note – See Schedule 1.2.2 Administrative definitions for definition of building height.</u> |
|                             |                                                                                                                                                              | <b>AO1.2</b>               | <u>Development on a premises with slope less than 25% that is not within a Bowen, Hamilton Island or Airlie Beach Precinct</u> <u>Local Plan area does not exceed the applicable zone building height specified in Table 8.2.5.3.3.</u><br><br><u>Note – Where a conflict occurs between QDC MP1.1; MP1.2; or MP1.3 and the Building heights overlay code, this code prevails.</u>                                                                                                      |

| Performance Outcomes                       |                                                                                                                                                                                                                                       | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

**8.2.6 Bushfire hazard overlay code**

**8.2.6.1 Application**

This code applies to accepted and assessable development:

- (a) subject to the Bushfire hazard overlay map, excluding buffer zones, contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Bushfire hazard overlay code by the tables of assessment in Part 5 (Tables of assessment).

**8.2.6.2 Purpose and overall outcomes**

- (1) The purpose of the Bushfire hazard overlay code is to:
  - (a) ensure that risk to life, property, community, and the environment as a result of bushfire is mitigated to an acceptable or tolerable level.
- (2) The purpose of the Bushfire hazard overlay code will be achieved through the following overall outcomes:
  - (a) development is laid out and located to minimise the exposure and vulnerability of people and property at risk from bushfires;
  - (b) development contributes to the effective and efficient emergency response and recovery capabilities;
  - (c) rehabilitation, revegetation, and landscaping does not increase the risk to people or property;
  - (d) development only establishes or intensifies vulnerable uses within the bushfire prone area where no other option exists to provide the necessary level of service;
  - (e) development only establishes or intensifies community infrastructure providing essential services within the bushfire prone area where necessary to provide an adequate level of service to the existing and projected population; and
  - (f) development avoids or mitigates the risk from the manufacture or storage of materials that are hazardous in the context of bushfire.

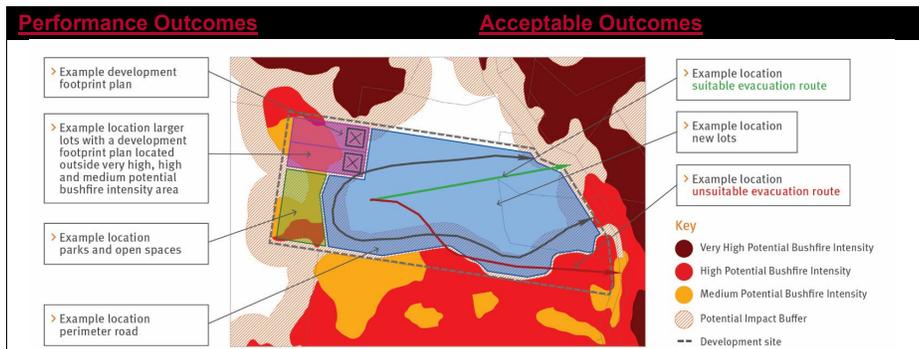

**8.2.6.3 Assessment benchmarks**

**Table 8.2.6.3.1 Benchmarks for accepted and assessable development**

| <b>Performance Outcomes</b>                                                       |                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Acceptable Outcomes</b> |                                                                                                                                                                                                                                                                          |

| <b>PO10</b>                                                                                                                                                                                                                                                                                                    | <p>Site layout achieves an acceptable or tolerable risk to people. Landscape or open space provided as part of the development;</p> <p>(a) acts as a buffer between hazardous vegetation and development; and</p> <p>(b) does not create additional bushfire prone areas.</p> <p>Note – An applicant may seek to undertake a site-level verification of the location and nature of hazardous vegetation and resulting potential bushfire intensity levels, for example where changes in foliage have occurred (e.g. as a consequence of adjoining permanent urban development) or where an applicant seeks to verify the regional ecosystem map inputs. This verification should form part of a bushfire hazard assessment in accordance with the methodology in the QFES <i>Bushfire resilient communities</i> document. The outcomes of this assessment can demonstrate how an alternate solution to the acceptable outcome can deliver an acceptable or tolerable level of risk.</p> | <b>AO10.1</b>       | <p>Site layout places the landscape and open spaces within the site between premises and adjacent mapped medium, high or very high potential bushfire intensity areas.</p> <p>Note - refer to Figure 3 for protective landscape treatments.</p>                                                                                                                                                                                                                                                                                                                                                                                                           |
|                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>AO10.2</b>       | <p>This landscaping and open space comprises protective landscape treatments that:</p> <p>(a) comprise only low threat vegetation, including grassland managed in a minimal fuel condition, maintained lawns, golf courses and cultivated gardens; or</p> <p>(b) are designed to ensure a potential available fuel load is maintained at less than 8 tonnes/hectare in aggregate and that fuel structure remains discontinuous.</p> <p>Note – Minimal fuel condition means there is insufficient fuel available to significantly increase the severity of the bushfire attack, for example short-cropped grass to a nominal height of 10 centimetres.</p> |

| <u>Width</u>     | <p>Contains a width of at least 20 metres including:</p> <ol style="list-style-type: none"> <li><u>A trafficable area (cleared and formed):</u> <ol style="list-style-type: none"> <li><u>with a minimum width of 4 metres that can accommodate a rural firefighting vehicle</u></li> <li><u>with no less than 4.8 metres vertical clearance from canopy vegetation</u></li> <li><u>with no adjacent inhibiting embankments or retaining walls</u></li> </ol> </li> <li><u>A working area each side of the trafficable area:</u> <ol style="list-style-type: none"> <li><u>with a minimum width of 3 metres each side</u></li> <li><u>cleared of all flammable vegetation greater than 10 centimetres in height</u></li> </ol> </li> <li><u>The balance (i.e. 10 metre width) managed vegetation area:</u> <ol style="list-style-type: none"> <li><u>sited to separate the trafficable area from adjacent mapped medium, high or very high potential bushfire intensity areas managed vegetation</u></li> <li><u>comprising managed vegetation clear of major surface hazards.</u></li> </ol> </li> </ol> |
| <u>Access</u>    | <p><u>Access is granted in favour of the local government and Queensland Fire and Emergency Services</u></p> <p><u>Note – This access is commonly granted in the form of an easement that is to be maintained by the grantor.</u></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <u>Egress</u>    | <u>Contains trafficable vehicle routes into low hazard areas, every 200 metres</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

**Table 8.2.6.3.442 Vulnerable uses, community infrastructure for essential services and materials that are hazardous in the context of bushfire hazard**

| <u>Group</u>                                                 | <u>Uses</u>                                                                                                                                                                                                                                                                |
|--------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Vulnerable uses</u>                                       | <u>childcare centre, community care centre, detention facility, educational establishment, hospital, nature-based tourism, relocatable home park, rooming accommodation, residential care facility, resort complex, retirement facility, tourist park</u>                  |
| <u>Community infrastructure for essential services</u>       | <u>educational establishment, emergency services, hospital</u>                                                                                                                                                                                                             |
| <u>Hazardous materials in the context of bushfire hazard</u> | <u>Hazardous chemicals that are present at the levels or in the quantities that would constitute the use being a hazardous chemical facility. Hazardous materials that are present in the quantities identified in the Work Health and Safety Regulation, Schedule 15.</u> |

## **8.2.4 Bushfire hazard overlay code**

### **8.2.4.1 Application**

This code applies to accepted and assessable development:

- (a) ~~subject to the Bushfire hazard overlay map contained within Schedule 2 (Mapping); and~~
- (b) ~~identified as requiring assessment against the Bushfire hazard overlay code by the tables of assessment in Part 5 (Tables of assessment).~~

**8.2.4.2 Purpose and overall outcomes**

- (1) ~~The purpose of the Bushfire hazard overlay code is to:~~
  - (f) ~~provide for the assessment of the suitability of development in Bushfire hazard areas to ensure that risk to life, property, community, economic activity and the environment during bushfire events is minimised; and~~
  - (g) ~~provide for the assessment of development that maintains the safety of people and property by not exposing them to an unacceptable risk from bushfire events.~~
- (2) ~~The purpose of the Bushfire hazard overlay code will be achieved through the following overall outcomes:~~
  - (a) ~~development directly, indirectly and cumulatively avoids an unacceptable increase in severity of the bushfire hazard and does not significantly increase the potential for damage on the site or to other properties;~~
  - (b) ~~development is compatible with the level of risk associated with the bushfire hazard;~~
  - (c) ~~development location, siting and design responds to the risk of the bushfire hazard and minimises risk to personal safety and property;~~
  - (d) ~~development supports the disaster management response or recovery by providing efficient access for evacuation of people, emergency services and water supplies during bushfire events;~~
  - (e) ~~where practical, community infrastructure is located and designed to function effectively during and immediately after a bushfire event; and~~
  - (f) ~~natural processes and the protective function of landforms and vegetation are maintained, where possible, in potential Bushfire hazard areas.~~

**8.2.4.3 Assessment benchmarks**

**Table 8.2.6.3.1 — Benchmarks for accepted and assessable development**

| Performance Outcomes |                                                                                       | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------|---------------------------------------------------------------------------------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PO1</b>           | Development is compatible with the level of risk associated with the bushfire hazard. | <b>AO1.1</b>        | <p>Development:</p> <ul style="list-style-type: none"> <li>(a) is not located on land identified in a Bushfire hazard area; or</li> <li>(b) if identified within a Bushfire hazard area, must ensure that people, property and the community are not exposed to an unacceptable or increased level of risk from a bushfire event.</li> </ul> <p>Note — This may be demonstrated by undertaking a site specific Bushfire hazard assessment report and Bushfire hazard management plan in accordance with PSP SC6.5 (Natural hazards).</p> |

| Performance Outcomes |                                                                                                                                                                                                                                                                                                                                                                                          | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>PO2</b>           | Development provides for firefighting requirements, with safety considerations for other utilities, including electricity and gas supplies.                           | <b>AO2.1</b>        | Electricity supplies and transmission poles in the area are protected and not vulnerable to bushfire events or associated activities (e.g. Falling trees).                                                                                                                                                                                             |

Whitsunday Regional Council Planning Scheme – Part 8 – ~~November 2021~~July-2017 (V4.01)

### ~~8.2.5 Coastal environment overlay code~~

### ~~8.2.7 Coastal hazard overlay code~~

#### ~~8.2.5.18.2.7.1~~ Application

This code applies to accepted and assessable development:

- (a) subject to the Coastal ~~environment hazard~~ overlay map contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Coastal ~~environment hazard~~ overlay code by the tables of assessment in Part 5 (Tables of assessment).

*Note – The State Code for assessment of Prescribed Tidal works is under Schedule 3 of Coastal Protection and Management Regulation Act 1997.*

*Note - Please see Schedule 10 of the Planning Regulation 2017 regarding works within a Coastal Management District.*

#### ~~8.2.5.28.2.7.2~~ Purpose and overall outcomes

- (1) The purpose of the Coastal ~~environment hazard~~ overlay code is to ensure that development is designed, constructed and operated to:
  - (a) protect, conserve, rehabilitate and manage the coast, including its resources and biological diversity;
  - (b) avoid the social, financial and environmental costs arising from the adverse impacts of coastal hazards, taking into account the predicted effects of climate change;
  - (c) preferentially use land on the coast for coastal-dependent development; and
  - (d) ensure development maintains the safety of people and property.
- (2) The purpose of the Coastal ~~environment hazard~~ overlay code will be achieved through the following overall outcomes:
  - (a) wherever possible, development within a Coastal hazard area avoids:
    - (i) intensification of existing uses;
    - (ii) new permanent built structures; and
    - (iii) seaward extensions to existing built structures;
  - (b) development maintains and enhances natural processes, including those below tidal waters;
  - (c) development location, siting and design responds to the risk of storm tide and tidal inundation and minimises risk to personal safety and property;
  - (d) development supports, and does not compromise, the ability of the disaster management response or recovery capacity and capabilities;
  - (e) development provides for
    - (i) efficient evacuation and emergency services access during coastal hazard events; or

- (ii) plans for the prospect and impact of isolation or hindered evacuation due to flooding from storm-tide and tidal inundation;
- (f) development ensures that urban services are designed, located and operated to minimise damage to property, disruption to building function and the recovery time after a storm-tide or tidal inundation event;
- (g) development does not cause or increase adverse impacts on other premises within the coastal environment from flooding and does not impede the ability of neighbouring sites to implement future coastal hazard mitigation measures;
- (h) development in areas subject to coastal hazards protects biodiversity, the loss of environmental networks and the scenic amenity of important coastal areas, landscapes and views;
- (i) development minimises the private use of land prone to permanent inundation;
- (j) development maintains public access to the coast;
- (k) development preserves opportunities for locating coastal-dependent land uses in areas adjoining tidal waters; and
- (l) development and infrastructure avoids or mitigates the impacts of predictable future coastal hazard due to increase in sea-level rise and cyclonic activity.

**8.2.5.38.2.7.3 Assessment Criteria**

**Table 8.2.7.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes |                                                                                                                                                                                                                                                                                                                                                       | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

~~8.2.6 — Environmental significance overlay code~~

~~8.2.7 —~~

~~8.2.8 — Application~~

~~8.2.9 —~~

~~8.2.10 — This code applies to accepted and assessable development:~~

~~8.2.11 —~~

~~8.2.12 — subject to the Environmental significance overlay map contained within Schedule 2 (Mapping); and~~

~~8.2.13 —~~

~~8.2.14 — identified as requiring assessment against the Environmental significance overlay code by the tables of assessment in Part 5 (Tables of assessment).~~

~~8.2.15 —~~

~~8.2.16 — Purpose and overall outcomes~~

~~8.2.17 —~~

~~8.2.18 — The purpose of the Environmental significance overlay code is to ensure that:~~

~~8.2.19 —~~

~~8.2.20 — matters of environmental significance are protected; and~~

~~8.2.21 —~~

~~8.2.22 — ecological connectivity and habitat extent are maintained or enhanced.~~

~~8.2.23 —~~

~~8.2.24 — The purpose of the Environmental significance overlay code will be achieved through the following overall outcomes:~~

~~8.2.25 —~~

~~8.2.26 — matters of environmental significance are valued and protected;~~

~~8.2.27 —~~

~~8.2.28 — the health and resilience of biodiversity is maintained or enhanced to support ecological integrity;~~

~~8.2.29 —~~

~~8.2.30 — development conserves and enhances biodiversity values and associated ecosystem services in the Region;~~

~~8.2.31 —~~

~~8.2.32 — development protects and establishes appropriate buffers to native vegetation and significant fauna habitat;~~

~~8.2.33 —~~

~~8.2.34 — development protects known populations and supporting habitat of:~~

~~8.2.35 —~~

~~8.2.36 — matters of National environmental significance, as listed in the *Environment Protection and Biodiversity Conservation Act 1999*;~~

~~8.2.37 —~~

~~8.2.38 — endangered, vulnerable and near threatened flora and fauna species, as listed in the *Nature Conservation Act 1992*; and~~

~~8.2.39 —~~

~~8.2.40 — regulated vegetation protected under the *Vegetation Management Act 1999*;~~

~~8.2.41 —~~

~~8.2.42 — development is located, designed and managed to avoid or mitigate adverse direct or indirect impacts on ecological systems and processes; and~~

Whitsunday Regional Council Planning Scheme – Part 8 – ~~November 2021~~ July 2017 (V4.01)

~~8.2.43~~—

~~8.2.44~~— ~~development ensures that viable connectivity is maintained or enhanced between matters of environmental significance and biodiversity values.~~

~~8.2.45~~—

~~8.2.46~~— ~~Assessment benchmarks~~

~~8.2.109.1.1~~ **Extractive resources overlay code**

**8.2.8 Extractive resources overlay code**

~~8.2.109.18.2.8.1~~ **Application**

This code applies to accepted and assessable development:

- (a) subject to the Extractive resources overlay map contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Extractive resources overlay code by the tables of assessment in Part 5 (Tables of assessment).

~~8.2.109.28.2.8.2~~ **Purpose and overall outcomes**

- (1) The purpose of the Extractive resources overlay code is to protect and maintain the sustainable and viable use of extractive resources within the Region by preventing incompatible development and land uses from encroaching on the extractive resource/processing areas, the associated separation areas and transport routes.
- (2) The purpose of the Extractive resources overlay code will be achieved through the following overall outcomes:
  - (a) development occurring within, or adjacent to, extractive resource areas does not adversely affect or impair the ability of existing or future extractive industries to viably win the resource;
  - (b) development occurring within, or adjacent to, transport routes for extractive resources does not constrain, or otherwise conflict with, the ongoing safe and efficient transportation of the extractive resource; and
  - (c) the potential negative impacts of extractive industries on sensitive uses within, or adjacent to, extractive resource areas and associated transport routes is mitigated to maintain high levels of safety and amenity.

~~8.2.109.38.2.8.3~~ **Assessment benchmarks**

**8.2.1108.2.9 Flood hazard overlay code**

**8.2.110.18.2.9.1 Application**

This code applies to accepted and assessable development that is:

- (a) subject to the Flood hazard overlay maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Flood hazard overlay code by the tables of assessment in Part 5 (Tables of assessment).

Note – Where flood hazard is mapped from more than one flood source for a single property, or is also identified in the Coastal hazard overlay map, the assessment benchmark that provides the highest level of protection from any source of flooding applies. Editor’s Note - Council will make available (where flood modelling has been received by Council) the height of the defined flood level for any particular location upon request. Applicants should be aware that coastal hazards, such as storm tide inundation, may also affect the land. Where affected by multiple overlays, the overlay that provides the highest level (in AHD) from any source of inundation applies.

Council may not have detailed flood modelling for areas within the Planning Scheme that are affected by local flooding. In this instance, applicants are required to undertake their own investigations prior to undertaking development through the preparation of a Flood Hazard Assessment Report in accordance with PSP SC6.5 (Natural hazards).

Editor’s note – The flood hazard area defined by this planning scheme is taken to be the flood hazard area pursuant to section 13 of the Building Regulation 2006. Building work in a designated flood hazard area must meet the requirements of the relevant building assessment provisions under the Building Act 1975.

**8.2.110.28.2.9.2 Purpose and overall outcomes**

- (1) The purpose of the Flood hazard overlay code is to:
  - (a) provide for the assessment of the suitability of development in the Flood hazard overlay area, to ensure that risk to life, property, community, economic activity and the environment during flood events is minimised; and
  - (b) ensure that development does not increase the potential for flood damage on-site or to other property, both upstream and downstream.
- (2) The purpose of the Flood hazard overlay code will be achieved by the following outcomes:
  - (a) storage capacity of floodplains and the flood conveyance ~~capacity~~ of waterways are protected;
  - (b) development does not require complex engineering solutions, such as floodgates or extensive earthworks to mitigate adverse impacts;
  - ~~(b)(c)~~ incompatible uses are not located in areas susceptible to flood hazard;
  - ~~(e)(d)~~ development location, siting, layout, and access responds to-is designed to minimise the risk of the flooding and ~~minimises~~ risk to personal safety and property;
  - ~~(d)(e)~~ development ~~supports and~~ does not compromise the ability of the disaster management response or recovery capacity and capabilities;
  - ~~(e)(f)~~ development provides for:
    - i. efficient evacuation and emergency services access during flooding events; or

Whitsunday Regional Council Planning Scheme – Part 8 – ~~November 2021~~ July 2017 (V4.01)

ii. otherwise plans for the prospect and impact of isolation or hindered evacuation during flooding;

~~(f)~~(g) development directly, indirectly and cumulatively avoids an unacceptable increase in severity of the flood event and does not materially increase the extent or impact of the flood event on the site or to other properties;

~~(g)~~(h) development ensures that urban services are designed, located and operated to minimise damage to the environment, infrastructure, property, disruption to building function and recovery time after a flood event;

~~(h)~~(i) natural processes and the protective function of landforms and/or vegetation are maintained where possible in Flood hazard areas;

~~(i)~~(j) where practical, community infrastructure is located and designed to function effectively during, and immediately after, flood events; and

~~(j)~~(k) development ~~for new premises~~ mitigates the impacts of predictable future increases in flood hazards.

**8.2.110.38.2.9.3 Assessment benchmarks**

**Table 8.2.9.3.1 Benchmarks for accepted and assessable development**

| <u>Performance Outcomes</u>   | <u>Acceptable Outcomes</u> |
|-------------------------------|----------------------------|
| <u>All Flood hazard areas</u> |                            |

| <u>Performance Outcomes</u> |                                                                                                                                                                                                                                                                                                                                                                                                                     | <u>Acceptable Outcomes</u> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

Whitsunday Regional Council Planning Scheme – Part 8 – ~~November 2021~~ July 2017 (V4.01)

**8.2.1148.2.10 Heritage overlay code**

Editor's ~~n~~Note – This code does not apply to indigenous cultural heritage which is protected under the *Aboriginal Cultural Heritage Act 2003*. In accordance with this legislation, a person who carries out an activity must take all reasonable and practical measures to ensure the activity does not harm Aboriginal cultural heritage ("the cultural heritage duty of care").

Editor's note - Sites included in the Heritage overlay include Queensland and Commonwealth Heritage places. These are governed by their own relevant heritage legislation.

**8.2.111.18.2.10.1 Application**

This code applies to accepted and assessable development:

- (a) subject to the Heritage overlay map contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Heritage overlay code by the tables of assessment in Part 5 (Tables of assessment).

**8.2.111.28.2.10.2 Purpose and overall outcomes**

- (1) The purpose of the Heritage overlay code is to ensure development on a Heritage place is compatible with the cultural heritage significance of the place outlined in the place card.

Editor's Note – Heritage place cards are identified and explained on the Whitsunday Regional Council website [under the Local Heritage Register.](#)

- (2) The purpose of the Heritage overlay code will be achieved through the following overall outcomes:
  - (a) the cultural heritage significance of the Heritage place is conserved;
  - (b) development of the Heritage place is compatible with the cultural heritage significance of the place by:
    - (i) preventing the demolition or removal of Heritage places, unless there is no prudent and feasible alternative to its demolition or removal; and
    - (ii) maintaining or encouraging, as far as practical, the appropriate use, or adaptive re-use of Heritage places;
    - (iii) protecting, as far as practical, the materials and setting of the Heritage place;
    - (iv) ensuring, as far as practical, development on a Heritage place is compatible with the cultural heritage significance of the place; and
  - (c) development is compatible with the conservation and management of the cultural heritage significance of the Heritage place.

**8.2.111.38.2.10.3 Assessment benchmarks**

**Table 8.2.10.3.1 Benchmarks for accepted and assessable development**

**~~8.2.112~~ 8.2.11 Infrastructure overlay code**

**~~8.2.112.18.2.11.1~~ 8.2.11.1 Application**

This code applies to accepted and assessable development:

- (a) subject to the Infrastructure overlay shown on the overlay maps contained within Schedule 2 (Mapping); and
- (b) identified as requiring assessment against the Infrastructure overlay code by the tables of assessment in Part 5 (Tables of assessment).

**~~8.2.112.28.2.11.2~~ 8.2.11.2 Purpose and overall outcomes**

- (1) The purpose of the Infrastructure overlay code is to ensure that development is compatible with, and does not adversely affect the viability, integrity, operation and maintenance of the following existing and planned infrastructure and facilities with the Whitsunday region:
  - (a) major roads (State controlled roads);
  - (b) railways;
  - (c) major electricity infrastructure;
  - (d) substations;
  - (e) bulk water supply infrastructure;
  - (f) gas pipelines;
  - (g) strategic ports;
  - (h) public passenger transport facilities;
  - (i) wastewater treatment facilities; and
  - (j) waste management facilities.
- (2) The purpose of the Infrastructure overlay code will be achieved through the following overall outcomes:
  - (a) existing and planned infrastructure facilities, networks and corridors are protected from incompatible development;
  - (b) development in proximity to existing and planned infrastructure facilities, networks and corridors is appropriately located, designed, constructed and operated to:
    - (i) avoid compromising the integrity, operational efficiency and maintenance of infrastructure and facilities; and
    - (ii) protect the amenity, health and safety of people and property.

**8.2.11.2.38.2.11.3 Assessment benchmarks****Table 8.2.11.3.1 Benchmarks for accepted and assessable development**

**~~8.2.113.2.12~~ 8.2.12.2 Landslide hazard overlay code**

**~~8.2.113.18.2.12.1~~ 8.2.12.1 Application**

This code applies to accepted and assessable development:

- (a) subject to the Landslide overlay maps contained within Schedule 2 (Mapping); or
- (b) identified as requiring assessment against the Landslide overlay code by the tables of assessment in Part 5 (Tables of assessment).

**~~8.2.113.28.2.12.2~~ 8.2.12.2 Purpose and overall outcomes**

- (1) The purpose of the Landslide overlay code is to:
  - (a) provide for the assessment of the suitability of development, in an area subject to landslide hazard, to ensure that risk to life, property, community, economic activity and the environment is minimised; and
  - (b) ensure that development does not increase the potential damage from landslide events on site or to other property.
- (2) The purpose of the Landslide overlay code will be achieved through the following overall outcomes:
  - (a) development is compatible with the level of risk associated with the landslide hazard;
  - (b) development siting, design, layout and access responds to the risk of the landslide hazard and minimises risk to personal safety and property;
  - (c) development supports, and does not unduly burden, disaster management response or recovery capacity and capabilities;
  - (d) development avoids an unacceptable increase in severity of the landslide hazard and does not significantly increase the potential for damage on the site or to other properties;
  - (e) where practical, community infrastructure is located and designed to function effectively during and immediately after a landslide event;
  - (f) development avoids the release of hazardous materials, as a result of the landslide hazard; and
  - (g) natural processes and the protective function of landforms and/or vegetation are maintained in Landslide hazard areas.

Whitsunday Regional Council Planning Scheme – Part 8 – ~~November 2021~~July-2017 (V4.01)

~~8.2.114 Waterways and wetlands overlay code~~

~~8.2.115~~

~~8.2.116 Application~~

~~8.2.117~~

~~8.2.118 This code applies to accepted and assessable development:~~

~~8.2.119~~

~~8.2.120 subject to the Waterways and wetlands overlay map contained within Schedule 2 (Mapping); and~~

~~8.2.121~~

~~8.2.122 identified as requiring assessment against the Waterways and wetlands overlay code by the tables of assessment in Part 5 (Tables of assessment).~~

~~8.2.123~~

~~8.2.124 Purpose and overall outcomes~~

~~8.2.125~~

~~8.2.126 The purpose of the Waterways and wetlands overlay code is to ensure that:~~

~~8.2.127~~

~~8.2.128 matters of environmental significance are protected;~~

~~8.2.129~~

~~8.2.130 ecological connectivity and habitat extent are maintained or enhanced;~~

~~8.2.131~~

~~8.2.132 wetlands and waterways are protected, maintained or enhanced; and~~

~~8.2.133~~

~~8.2.134 development in, or adjacent to, wetlands in a Great Barrier Reef catchment is planned, designed, constructed and operated to prevent the loss, or degradation of, the wetlands and their environmental values.~~

~~8.2.135~~

~~8.2.136 The purpose of the Waterways and wetlands overlay code will be achieved through the following overall outcomes:~~

~~8.2.137 development maintains or enhances the biodiversity values, and associated ecosystem services of, waterways and wetlands within the Whitsunday region;~~

~~8.2.138 development protects and establishes appropriate buffers to waterways and wetlands;~~

~~8.2.139 development protects known populations and supporting habitat of:~~

~~8.2.140 matters of national environmental significance, as listed in the *Environment Protection and Biodiversity Conservation Act 1999*;~~

~~8.2.141~~

~~8.2.142 endangered, vulnerable and near threatened flora and fauna species, as listed in the *Nature Conservation Act 1992*; and~~

~~8.2.143~~

~~8.2.144 regulated vegetation protected, under the *Vegetation Management Act 1999*;~~

~~8.2.145~~

~~8.2.146 development is planned, designed, constructed and managed to avoid, or mitigate, significant impacts on environmental values and processes of waterways and wetlands;~~

~~8.2.147 development ensures that viable connectivity is maintained or enhanced between matters of environmental significance and biodiversity values;~~

~~8.2.148~~

~~8.2.149 development protects the ecological values and processes, physical extent and buffering of waterways and wetlands;~~

~~8.2.150~~

Whitsunday Regional Council Planning Scheme – Part 8 – ~~November 2021~~ July 2017 (V4.01)

~~8.2.151—development enhances existing wetland environmental values, or avoids adverse effects on, wetland environmental values;~~

~~8.2.152—~~

~~8.2.153—Assessment benchmarks~~

~~8.2.154—~~

~~8.2.155—Table 8.2.12.3.1 Benchmarks for accepted and assessable development~~

| 8.2.156 — Performance Outcomes                      |                                                                                            | 8.2.157 — Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------------------------|--------------------------------------------------------------------------------------------|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Part 9 Development codes

### 9.1 Preliminary

- (1) Development codes are codes for assessment where identified as an applicable code in Part 5 (Tables of assessment).
- (2) The following codes and requirements apply to development under Schedule 6 of the Regulation, which are relevant for the Planning Scheme.
- (3) Use codes and other development codes are specific to each Planning Scheme area.
- (4) The following are the codes and requirements under the Regulation for development in the Planning Scheme area:
  - (a) Community residence code requirements applying to development that may not be made assessable development under the Planning Scheme
  - (b) Cropping involving forestry for wood production code applying to development that may not be made assessable development under the Planning Scheme
  - (c) Reconfiguring a lot (subdividing one lot into two lots) and associated Operational works code applying to development for which code assessment is required under Schedule 10, part 12 and Schedule 10, Part 14 Division 2 of the Regulation.
- (5) The following are the use codes for the Planning Scheme:
  - (a) Business activities code
  - (b) Caretaker's accommodation code
  - (c) Child care centre code
  - (d) Dual occupancy code
  - (e) Dwelling house code
  - ~~(f)~~ (f) Extractive industry code
  - ~~(f)~~ —
  - (g) Home based business code
  - (h) Industry activities code
  - (i) Market code
  - ~~(j)~~ (j) Multi-unit code
  - (i) Relocatable home park and tourist park code
  - (k) Renewable energy facilities code
  - (l) Residential care and retirement facility code
  - (m) Rural activities code

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

~~(m)~~(n) Rural tourism code

~~(n)~~(o) Sales office code

~~(p)~~ Service station code

~~(e)~~(q) Short-term accommodation and multi-unit uses code

~~(p)~~(r) Telecommunication facility code

(6) The following are the other development codes for the Planning Scheme:

(a) Advertising devices code

(b) Construction management code

~~(c)~~ Excavation and filling code

~~(d)~~ Healthy waters code

~~(e)~~ —

~~(d)~~(e) Infrastructure code

~~(e)~~(f) Landscaping code

~~(f)~~(g) Reconfiguring a lot code

~~(g)~~(h) Transport and parking code

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

## 9.2 Development that cannot be made assessable in accordance with Schedule 6 of the Planning Regulation 2017

### 9.2.1 Community residence requirements

Development for a community residence that complies with the acceptable outcomes in Table 9.2.3.1 is accepted development.

**Table 9.2.3.1 Community residence for accepted development only**

| Requirements |                                                                                      |
|--------------|--------------------------------------------------------------------------------------|
| 1.           | The premises are in a residential zone or rural residential zone.                    |
| 2.           | No more than 7 support workers attend the residence in a 24-hour period.             |
| 3.           | At least 2 car parks are provided on the premises for use by residents and visitors. |
| 4.           | At least 1 of the car parks stated in (3) is suitable for persons with disabilities. |
| 5.           | At least 1 car park is provided on the premises for use by support workers.          |

Editor's note—Schedule 6, Part 2, (6) of the Regulation states the development the Planning Scheme is prohibited from making assessable development for a material change of use for community residence.

## 9.2.2 Requirements for Cropping involving forestry for wood production code for accepted development

**Table 9.2.2.1 Code for accepted development that is a material change of use for cropping (involving forestry for wood production) or operational work for harvesting trees for wood production.**

~~**Table 9.2.3.11 Code for accepted development that is a material change of use for cropping involving forestry for wood production or operational work for harvesting trees for wood production.**~~

| Requirements                                              |                                                                                                                                                                                                                                                                   |
|-----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Setbacks</b>                                           |                                                                                                                                                                                                                                                                   |
| 1                                                         | The use or work is at a distance of at least the separation distance stated in <a href="#">Table 9.2.2.2 - Separation distances</a> <del>Table 9.2.3.12</del> below taken from the Regulation Schedule 13 Part 2 Table 1, column 2 Separation distances.          |
| 2                                                         | Seedlings within the separation distance stated in requirement (1) are removed if the seedlings: <ol style="list-style-type: none"> <li>are the same species as the trees to be harvested; and</li> <li>are not native to the local area.</li> </ol>              |
| <b>Impacts on soil structure, fertility and stability</b> |                                                                                                                                                                                                                                                                   |
| 3                                                         | For land with a slope of more than 10% but less than 25% - the development uses only— <ol style="list-style-type: none"> <li>mechanical strip cultivation on the contour;</li> <li>spot cultivation; or</li> <li>manual cultivation.</li> </ol>                   |
| 4                                                         | For land with a slope of 25% or more – the development uses only— <ol style="list-style-type: none"> <li>spot cultivation; or</li> <li>manual cultivation.</li> </ol>                                                                                             |
| 5                                                         | The construction, operation or maintenance of a track or road for the development does not adversely affect – <ol style="list-style-type: none"> <li>a natural drainage feature on the land; or</li> <li>land that is subject to erosion or landslide.</li> </ol> |
| 6                                                         | A track or road for the development – <ol style="list-style-type: none"> <li>is appropriately drained; and</li> <li>has a stable surface.</li> </ol>                                                                                                              |
| 7                                                         | Drainage structures for a track or road for the development are regularly maintained.                                                                                                                                                                             |
| 8                                                         | Drainage water from a track or road for the development is directed away from exposed soils, and onto undisturbed ground or other areas with a stable surface.                                                                                                    |
| <b>Fire risk</b>                                          |                                                                                                                                                                                                                                                                   |
| 9                                                         | For development involving a forest for wood production that is less than 40ha - a fire break that is at least 7m wide, measured from the base of the outermost tree in the forest to be harvested, is established and maintained.                                 |
| 10                                                        | For development involving a forest for wood production that is at least 40ha, but less than 100ha — a fire break that is at least 10m wide, measured from the base of the outermost tree in the forest to be harvested, is established and maintained.            |
| 11                                                        | For development involving a forest for wood production that is 100ha or more—                                                                                                                                                                                     |

## 9.2.3 Reconfiguring a lot (subdividing one lot into two lots) and associated operational works code

### 9.2.3.1 Purpose

The purpose of the Reconfiguring a lot (subdividing one lot into two lots) and associated operational works code is for assessing applications for development for reconfiguring a lot that requires assessment as regulated in Part 5, Section 5.4 under Table 5.4.2 (Regulated categories of assessment: reconfiguring a lot).

Editor’s note—Schedule 12 (3) of the Regulation sets out the assessment benchmarks for the reconfiguring a lot.

This code applies to a reconfiguring of a lot if:

- (a) The lot is in an industrial zone or residential zone (other than a park residential zone or rural residential zone);
- (b) The reconfiguration is the subdivision of 1 lot, other than a rear lot, into 2 lots (each a created lot);
- (c) Each created lot is at least the minimum lot size for the relevant zone stated in a local instrument; and
- (d) the reconfiguration is consistent with the purpose statement for the relevant zone stated in a local instrument.

However, this code does not apply if:

- (a) all or part of the premises, is in an erosion prone area or any of the following areas under a local instrument:
  - (i) a flood hazard area;
  - (ii) a bushfire hazard area;
  - (iii) a landslide hazard area;
  - (iv) a storm tide inundation area; or
- (b) an overlay in a local instrument applies to all or part of the premises or any part of the premises.

For this section –

**Industrial zone** means area, (however described), designated in a local categorising instrument as industrial.

**Relevant zone** means the zone applying to premises under a local instrument.

A reference to a local instrument is a reference to a local instrument applying to the premises.

**Table 9.2.3.1 Reconfiguring a lot (subdividing one lot into two lots) and associated operational works requiring code assessment**

| Requirements |                                                                                                                                                                                                                                                                                                |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.           | The frontage of each created lot complies with the minimum frontage requirements for the relevant zone stated in a local instrument.                                                                                                                                                           |
| 2.           | The building envelope of each created lot complies with the building envelope requirements for the relevant zone stated in a local instrument.                                                                                                                                                 |
| 3.           | The reconfiguration involves the creation of a rear lot, only if the local instrument states that a rear lot is consistent with the relevant zone.                                                                                                                                             |
| 4.           | The number of lots, including rear lots adjoining each created lot, complies with the maximum number of adjoining lots of the relevant zone stated in a local instrument.                                                                                                                      |
| 5.           | If the reconfiguration creates a rear lot: <ul style="list-style-type: none"> <li>(i) an access strip for the rear lot does not adjoin the access strip of more than 1 other rear lot; and</li> <li>(ii) no more than 2 rear lots are accessed from the head of a single cul-de-sac</li> </ul> |

|     |                                                                                                                                                                                                                                                                                                                                                                                     |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6.  | If a local instrument states minimum setback distances for the relevant zone, the distance of a building or structure from a boundary of a created lot complies with the minimum distances stated in the local instrument.                                                                                                                                                          |
| 7.  | If the reconfiguration is in a residential zone and a local instrument does not state minimum setback distances for the zone, the distance of an existing building or structure from a boundary of a created lot complies with the minimum setback distances stated in the Queensland Development Code, Parts 1.1 to 1.3                                                            |
| 8.  | A new building or structure on the premises: <ul style="list-style-type: none"> <li>(i) will comply with the Queensland Development Code, Part 1.4; and</li> <li>(ii) will be outside of an existing or planning infrastructure easement.</li> </ul>                                                                                                                                |
| 9.  | Each created lot has access to the road network through: <ul style="list-style-type: none"> <li>(i) direct road frontage;</li> <li>(ii) an access strip; or</li> <li>(iii) an access easement, if a local instrument states that an access easement is consistent with the relevant zone.</li> </ul>                                                                                |
| 10. | Access from each created lot to the road network is: <ul style="list-style-type: none"> <li>(i) lawful, safe and practical; and</li> <li>(ii) designed and built in accordance with requirements for the relevant zone stated in a local instrument, including requirements about width, length or gradient.</li> </ul>                                                             |
| 11. | If a local instrument does not state a minimum width requirement for an access strip or access easement in the relevant zone, an access strip or access easement for a created lot has a minimum width of: <ul style="list-style-type: none"> <li>(i) for reconfiguring a lot in a residential zone—5m; or</li> <li>(ii) for reconfiguring a lot in an industry zone—8m.</li> </ul> |
| 12. | If a local instrument does not state a maximum length requirement for an access strip or access easement in the relevant zone, an access strip or access easement for a created lot has a maximum length of 50m.                                                                                                                                                                    |
| 13. | If the premises are in a reticulated water area, each created lot is connected to the reticulated water supply system.                                                                                                                                                                                                                                                              |
| 14. | If the premises are not in a reticulated water area, each created lot has an alternative potable water supply source that complies with the minimum storage capacity requirements for the relevant zone stated in a local instrument.                                                                                                                                               |
| 15. | If the premises is in an area with a sewerage service, each created lot is connected to the sewerage service.                                                                                                                                                                                                                                                                       |
| 16. | If the premises is not in an area with a sewerage service, each created lot has an effluent treatment and disposal system designed and built in accordance with the requirements stated in a local instrument.                                                                                                                                                                      |
| 17. | Each lot is connected to a supply network and telecommunication network, if required under a local instrument.                                                                                                                                                                                                                                                                      |
| 18. | Any other infrastructure necessary to service the lots will be provided, designed and built in accordance with the requirements stated in a local instrument.                                                                                                                                                                                                                       |
| 19. | The release of sediment from the premises, including from erosion and sediment-laden stormwater runoff: <ul style="list-style-type: none"> <li>(i) is minimised during and after construction; and</li> <li>(ii) complies with the requirements stated in a local instrument.</li> </ul>                                                                                            |
| 20. | Filling and excavation on the premises: <ul style="list-style-type: none"> <li>(i) does not cause a vertical change to the natural ground level of more than 1m; and</li> <li>(ii) does not result in ponding on the premises or adjoining land; and</li> <li>(iii) complies with the requirements stated in a local instrument.</li> </ul>                                         |

### 9.3 Use codes

#### 9.3.1 Business activities code

##### 9.3.1.1 Application

This code applies to accepted and assessable development identified as requiring assessment against the Business activities code by the tables of assessment in Part 5 (Tables of assessment).

##### 9.3.1.2 Purpose and overall outcomes

- (1) The purpose of the Business activities code is to ensure that Business activities:
  - (a) are developed in a manner consistent with the Whitsunday regions hierarchy of centres; and
  - (b) are of a high quality design which reflects good centre design principles and appropriately responds to local character, environment and amenity considerations.
- (2) The purpose of the Business activities code will be achieved through the following overall outcomes:
  - (a) a Business activity is of a type, scale and intensity that is consistent with and reinforces the Whitsunday regions hierarchy of centres;
  - (b) a Business activity incorporates building and landscape design that responds to the Region's tropical climate as well as the character of the particular local area;
  - (c) a Business activity is integrated into its surrounds and reflects high quality town centre design, streetscape and landscaping principles; and
  - (d) a Business activity avoids or mitigates adverse impacts upon the amenity, privacy or environmental quality of nearby Accommodation activities.

##### 9.3.1.3 Assessment benchmarks

**Table 9.3.1.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes                                   |                                                                                                                                                | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Relationship of buildings to streets and public spaces |                                                                                                                                                |                     |                                                                                                                                                                                                                                                                                                                                              |
| PO1                                                    | The Business activity is in a building that clearly defines frames or encloses the street and other useable public and semi-public open space. | AO1.1               | The building is located close to the street frontage and other urban spaces for all or most of its length to create a continuous or mostly continuous edge.                                                                                                                                                                                  |
|                                                        |                                                                                                                                                | AO1.2               | The building is sited and designed, such that: <ol style="list-style-type: none"> <li>(a) the main pedestrian entrance to the building, or group of buildings, is located on the primary street frontage;</li> <li>(b) pedestrian access to the entrance of the building(s) or individual dwellings is easily discerned <u>by</u></li> </ol> |

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

| Performance Outcomes                 |                                                                                                                                                                                                             | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

### 9.3.2 Caretaker's accommodation code

#### 9.3.2.1 Application

This code applies to accepted and assessable development:

- (a) being a material change of use for caretaker's accommodation; and
- (b) identified as requiring assessment against the Caretaker's accommodation code by the tables of assessment in Part 5 (Tables of assessment).

#### 9.3.2.2 Purpose and overall outcomes

- (1) The purpose of the Caretaker's accommodation code is to provide for the development of caretaker's accommodation use, which provides acceptable levels of amenity for occupants.
- (2) The purpose of the Caretaker's accommodation code will be achieved through the following overall outcomes:
  - (a) caretaker's accommodation is used for genuine caretaking or property management purposes;
  - (b) caretaker's accommodation remains ancillary to non-residential premises on the same site;
  - (c) an acceptable level of residential amenity is provided for occupants of caretaker's accommodation; and
  - (d) caretaker's accommodation does not adversely impact upon the amenity of the local area.

#### 9.3.2.3 Assessment benchmarks

**Table 9.3.2.3.1 Benchmarks for accepted and assessable development**

| <b>PO4</b>                 | The caretaker's accommodation is provided with adequate private open space that is useable and directly accessible from the caretaker's accommodation.              | <b>AO4.1</b>        | The caretaker's accommodation contains an area of private open space, which is directly accessible from a habitable room and:<br>(a) if at ground level, has an area of not less than 16m <sup>2</sup> , with no horizontal dimension of less than 4m; or<br>(b) if a balcony, verandah or deck has an area of not less than 10m <sup>2</sup> , with no horizontal dimension of less than 2.5m. |
| <b>PO5</b>                 | The design of the caretaker's accommodation is compatible with the preferred character of the zone in which it is located.                                          | <b>AO5.1</b>        | The caretaker's accommodation does not exceed the maximum building height for the zone in which it is located, as specified in the applicable zone code.                                                                                                                                                                                                                                        |
| <b>On-site car parking</b> |                                                                                                                                                                     |                     |                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>PO6</b>                 | Sufficient on-site car parking is provided to satisfy the projected needs of the caretaker's accommodation and is appropriately designed to facilitate ease of use. | <b>AO6.1</b>        | A minimum of 1 on-site parking space is provided for exclusive use by the occupants of the caretaker's accommodation.                                                                                                                                                                                                                                                                           |
|                            |                                                                                                                                                                     | <b>AO6.2</b>        | Development provides access driveways, internal circulation, manoeuvring areas and on site car parking areas in accordance with AS2890 (Parking facilities: Off-street car parking).                                                                                                                                                                                                            |

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

### 9.3.3 Child care centre code

#### 9.3.3.1 Application

This code applies to assessable development:

- (a) being a material change of use for a child care centre; and
- (b) identified as requiring assessment against the Child care centre code by the tables of assessment in Part 5 (Tables of assessment).

#### 9.3.3.2 Purpose and overall outcomes

- (1) The purpose of the Child care centre code is to ensure child care centres are appropriately located and are designed in a manner which provides a safe environment for users and protects the amenity of surrounding premises.
- (2) The purpose of the Child care centre code will be achieved through the following overall outcomes:
  - (a) a viable child care centre network is established and maintained for the Whitsunday region;
  - (b) child care centres are conveniently located close to residential communities or major employment nodes;
  - (c) the health and safety of children is not compromised by incompatible land use activities or poor design; and
  - (d) a child care centre does not have a detrimental impact on the amenity of surrounding residential premises.

#### 9.3.3.3 Assessment benchmarks

**Table 9.3.3.3.1 Benchmarks for assessable development**

| Performance Outcomes          |                                                                                                                                                                                                         | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                      |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location and site suitability |                                                                                                                                                                                                         |                     |                                                                                                                                                                                                                                                                                                                                      |
| <b>PO1</b>                    | The child care centre is co-located with other compatible Community activities or Business activities to maximise accessibility.                                                                        | <b>AO1.1</b>        | The child care centre is located: <ul style="list-style-type: none"> <li>(a) within 400m of, or is integrated with, another compatible Community activity;</li> <li>(b) on a conveniently accessible site at the entrance to a residential neighbourhood; or</li> <li>(c) in an activity centre or other employment area.</li> </ul> |
| <b>PO2</b>                    | The child care centre is located on a road, which is accessible and safe but not predominately used by local residential traffic.                                                                       | <b>AO2.1</b>        | The child care centre is located on a site with access and frontage to a collector street.                                                                                                                                                                                                                                           |
| <b>PO3</b>                    | The child care centre is located and designed to ensure that children and staff are not exposed to unacceptable levels of noise, unhealthy air emissions contaminants or other unacceptable risks, such | <b>AO3.1</b>        | The child care centre is located on a site where: <ul style="list-style-type: none"> <li>(a) soils are not contaminated by pollutants, which represent a health or safety risk to children and staff;</li> </ul>                                                                                                                     |

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

### 9.3.4 Dual occupancy code

#### 9.3.4.1 Application

This code applies to accepted and assessable development:

- (a) being for building work for a dual occupancy; and
- (b) identified as requiring assessment against the Dual occupancy code by the tables of assessment in Part 5 (Tables of Assessment).

#### 9.3.4.2 Purpose and overall outcomes

- (1) The purpose of the Dual occupancy code is to ensure that development involving a dual occupancy achieves a high level of comfort and amenity for occupants, maintains the amenity and enjoyment of neighbouring premises and is compatible with the character of the streetscape and surrounding area.
- (2) The purpose of the Dual occupancy code will be achieved through the following overall outcomes:
  - (a) a dual occupancy makes a positive contribution to the streetscape character of the area in which it is located;
  - (b) a dual occupancy is sited and designed to protect the amenity, privacy and access to sunlight of adjoining residential premises;
  - (c) a dual occupancy provides a high level of amenity and safety for residents of the dual occupancy; and
  - (d) a dual occupancy is provided with an acceptable level of infrastructure and services.

#### 9.3.4.3 Assessment benchmarks

**Table 9.3.4.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes             |                                                                                                                                                                                                                                                              | Acceptable Outcomes |                                                                                                                                                 |

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

**~~12.3.5.59.3.5~~ Dwelling house code**

**~~12.3.5.49.3.5.1~~ Application**

This code applies to accepted and assessable development:

- (a) being for building work for a dwelling house; and
- (b) identified as requiring assessment against the Dwelling house code by the tables of assessment in Part 5 (Tables of Assessment).

Editor’s note – in accordance with Schedule 1 (Definitions), a reference to a dwelling house includes outbuildings and works normally associated with a dwelling, including a secondary dwelling.

**~~12.3.5.59.3.5.2~~ Purpose and overall outcomes**

~~(4)(1)~~ The purpose of the Dwelling house code is to ensure the design and siting of detached houses protects residential amenity and maintains streetscape character and that associated dwellings and outbuildings are of an appropriate scale and intensity.

~~(5)(2)~~ The purpose of the Dwelling house code will be achieved through the following overall outcomes:

- (a) the building form, siting design and use of the dwelling house is consistent with the desired amenity and character of the area;
- (b) a dwelling house is sited and designed to protect the amenity, privacy and access to sunlight of adjoining residential premises;
- (c) a dwelling house provides a high level of amenity and safety for residents of the dwelling house;
- (d) a dwelling house is provided with an acceptable level of infrastructure and services;
- (e) outbuildings are of an appropriate scale and intensity and are compatible with surrounding development;
- (f) secondary dwellings are small in scale and ancillary to the principal use for a dwelling house; and
- (g) a dwelling house is not at an unacceptable risk from natural hazards.

**~~12.3.5.69.3.5.3~~ Assessment benchmarks**

Editor’s note – an approved plan of development for a variation approval overriding the Planning Scheme or reconfiguring a lot may vary or specify alternative assessment benchmarks for a dwelling house. In such cases, compliance with these alternative assessment benchmarks will be deemed to represent compliance with the comparable provisions of the Dwelling house code.

**Table 9.3.5.3.1 Benchmarks for acceptable and assessable development**

|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>PO6PO4</b>        | A secondary dwelling is subordinate in bulk and scale to maintain the appearance of a dwelling house with ancillary buildings when viewed from the street. | <b>AO3-1AO</b>      | Only one secondary dwelling is established in association with a dwelling house.                                         |
|                      |                                                                                                                                                            | <b>AO3-2AO</b>      | A secondary dwelling has a maximum GFA of 70m <sup>2</sup> and a TUA of 100m <sup>2</sup> , excluding car parking areas. |
|                      |                                                                                                                                                            | <b>AO3-3AO</b>      | A minimum of one on site car parking space is provided to service the secondary dwelling.                                |

**12.3.6.19.3.6 Extractive industry code**

**12.3.6.19.3.6.1 Application**

This code applies to assessable development:

- (a) being a material change of use for extractive industry; and
- (b) identified as requiring assessment against the Extractive industry code by the tables of assessment in Part 5 (Tables of assessment).

Editor's note – The Extractive resource area overlay map also show mining lease areas located within the Planning Scheme area. Mining lease areas are shown for information purposes only with mining operations in these areas regulated under the *Mineral Resources Act 1989*.

**12.3.6.29.3.6.2 Purpose and overall outcomes**

- (1) The purpose of the Extractive industry code is to ensure that the exploitation of extractive resources is undertaken in a sustainable manner which protects environmental and landscape values, public safety and the amenity of surrounding premises.
- (2) The purpose of the Extractive industry code will be achieved through the following overall outcomes:
  - (a) extraction of resources occurs in a sustainable manner;
  - (b) natural values and water quality are protected from any environmental degradation potentially arising from extractive industry operations;
  - (c) extractive industry operations are located, designed and constructed to avoid or effectively mitigate adverse impacts on any sensitive use, in particular, residential or rural residential premises;
  - (d) transport routes allow extractive materials to be transported with the least amount of impact on development along those roads and on the function of those roads; and
  - (e) land used for extractive industry operations is effectively rehabilitated.

**12.3.6.39.3.6.3 Assessment benchmarks**

**Table 9.3.6.3.1 Benchmarks for assessable development**

| Performance Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                 | Acceptable Outcomes |                                                                                                                                                                     |

**12.3.79.3.7 Home based business code**

**12.3.7.49.3.7.1 Application**

This code applies to accepted and assessable development:

- (a) being a material change of use for home based business; and
- (b) identified as requiring assessment against the Home based business code by the tables of assessment in Part 5 (Tables of assessment).

**12.3.7.29.3.7.2 Purpose and overall outcomes**

- (1) The purpose of the Home based business code is to facilitate legitimate home based business, conducted in a manner which is appropriate to the preferred character of the area and protects the amenity of surrounding premises.
- (2) The purpose of the Home based business code will be achieved through the following overall outcomes:
  - (a) a home based business is domestic in scale and operates in a manner that is subservient and ancillary to the Accommodation activity of the premises;
  - (b) a home based business is conducted in a manner that maintains the residential character and amenity of the locality; and
  - (c) a home based business is operated in a safe manner and does not impose an unreasonable load on infrastructure services.

**12.3.7.39.3.7.3 Assessment benchmarks**

**Table 9.3.7.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes                           |                                                                                                                                                                                                                                                                                       | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>PO9</b>                                                         | An acceptable standard of facilities is provided for guests of the bed and breakfast.                                            | <b>AO9.1</b>        | Guests are provided with a bedroom capable of being enclosed to prevent visual or other intrusion by members of the host family or other guests.                   |
|                                                                    |                                                                                                                                  | <b>AO9.2</b>        | A separate bathroom and toilet facility is provided within the dwelling house for the exclusive use of guests.                                                     |

**12.3.8-89.3.8 Industry activities code**

**12.3.8-49.3.8.1 Application**

This code applies to accepted and assessable development identified as requiring assessment against the Industry activities code by the tables of assessment in Part 5 (Tables of assessment).

**12.3.8-29.3.8.2 Purpose and overall outcomes**

- (1) The purpose of the Industry activities code is to ensure Industry activities are designed and operated in a manner which meets the needs of the Industry activity, protects public safety and environmental values and appropriately responds to amenity considerations.
- (2) The purpose of the Industry activities code will be achieved through the following overall outcomes:
  - (a) the scale and intensity of an Industry activity is compatible with its location and setting;
  - (b) an Industry activity incorporates a site layout and building design that provides for the efficient and safe conduct of industrial activities and contributes to a well organised development that is attractive when viewed from the street;
  - (c) an Industry activity does not cause environmental harm or nuisance, including the contamination of land or water;
  - (d) an Industry activity avoids or effectively mitigates adverse impacts on the amenity of adjoining and nearby non-industrial activity where these activities are located in a zone other than an industry zone; and
  - (e) an Industry activity incorporates service areas and waste management processes that are efficient and maximise opportunities for reuse or recycling.

**12.3.8-39.3.8.3 Assessment benchmarks**

**Table 9.3.8.3.1 Benchmarks for accepted and assessable development**

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

### **12.3.9.3.9 Market code**

#### **12.3.9.49.3.9.1 Application**

This code applies to accepted and assessable development:

- (a) being a material change of use for a market; and
- (b) identified as requiring assessment against the Market code by the tables of assessment in Part 5 (Tables of assessment).

#### **12.3.9.29.3.9.2 Purpose and overall outcomes**

- (1) The purpose of the Market code is to ensure markets are appropriately located and are operated in a manner, which is economically, environmentally and socially sustainable and appropriately responds to local amenity issues.
- (2) The purpose of the Market code will be achieved through the following overall outcomes:
  - (a) markets are established in locations of community attraction;
  - (b) markets are established where infrastructure and services are available or can easily be provided to meet the needs of users;
  - (c) markets operate in a manner, which takes account of:
    - (i) the amenity of the local area; and
    - (ii) the viability of local businesses.

#### **12.3.9.39.3.9.3 Assessment benchmarks**

**Table 9.3.9.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes          |                                                                                                                                                                                                                                                                                               | Acceptable Outcomes |                                                                                                                                                                                                    |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location and site suitability |                                                                                                                                                                                                                                                                                               |                     |                                                                                                                                                                                                    |
| <b>PO1</b>                    | The market is operated at a location where attracting a large number of people is consistent with the preferred character of the local area.                                                                                                                                                  | <b>AO1.1</b>        | The market use is not located in a residential zone.                                                                                                                                               |
| <b>PO2</b>                    | The market minimises economic impacts on established businesses near the market.                                                                                                                                                                                                              | <b>AO2.1</b>        | Where market stalls are proposed to be located adjacent to existing shops, the market is not held on more than 2 days per week.                                                                    |
| Site layout                   |                                                                                                                                                                                                                                                                                               |                     |                                                                                                                                                                                                    |
| <b>PO3</b>                    | The market is designed to provide for: <ul style="list-style-type: none"> <li>(a) convenient pedestrian access and movement;</li> <li>(b) legibility and accessibility between stalls and existing surrounding uses; and</li> <li>(c) pedestrian comfort and safety, including the</li> </ul> | <b>AO3.1</b>        | Pedestrian access or pathways are a minimum of 2m wide and provided between: <ul style="list-style-type: none"> <li>(a) stall fronts; and</li> <li>(b) stalls and existing shop fronts.</li> </ul> |
|                               |                                                                                                                                                                                                                                                                                               | <b>AO3.2</b>        | Public toilets: <ul style="list-style-type: none"> <li>(a) are provided within the area of the market or are located within 250m of the market;</li> </ul>                                         |

| Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

|

**~~12.3.10.3~~ 12.3.10 Relocatable home park and tourist park code**

**~~12.3.10.19~~ 12.3.10.1 Application**

This code applies to assessable development:

- (a) being a material change of use for a relocatable home park or tourist park ; and
- (b) identified as requiring assessment against the Relocatable home park and tourist park code by the tables of assessment in Part 5 (Tables of assessment).

**~~12.3.10.29~~ 12.3.10.2 Purpose and overall outcomes**

- (1) The purpose of the Relocatable home park and tourist park code is to ensure relocatable home parks and tourist parks are appropriately located and designed in a manner, which meets the needs of residents and visitors and protects the amenity of surrounding premises.
- (2) The purpose of the Relocatable home park and tourist park code will be achieved through the following overall outcomes:
  - (a) a relocatable home park and tourist park is well designed, located and offers convenient access to the services and facilities required to support residents' and travellers' needs;
  - (b) a relocatable home park and tourist park provides high quality amenities and facilities commensurate with its setting, the types of accommodation supplied and the length of stay accommodated;
  - (c) a relocatable home park and tourist park is of a scale and intensity that is compatible with the preferred character of the local area;
  - (d) a relocatable home park and tourist park does not adversely impact on the amenity of rural and residential areas or the viable operation of Rural activities; and
  - (e) a relocatable home park and tourist park is provided with appropriate infrastructure services.

**~~12.3.10.39~~ 12.3.10.3 Assessment benchmarks**

**Table 9.3.10.3.1 Benchmarks for assessable development**

**9.3.11 Renewable energy facilities code**

**9.3.11.1 Application**

This code applies to assessable development identified as requiring assessment against the Renewable energy facilities code by the tables of assessment in Part 5 (Tables of assessment).

**9.3.11.2 Purpose and overall outcomes**

- (1) The purpose of the Renewable energy facilities code is to ensure renewable energy facilities are developed in a sustainable manner which conserves the productive characteristics of rural land, protects environmental and landscape values and preserves the amenity of surrounding premises.
- (2) The purpose of the Renewable energy facilities code will be achieved through the following overall outcomes:
  - (a) Renewable energy facilities do not affect good quality agricultural land for present and future productivity;
  - (b) Renewable energy facilities are appropriately designed and sited to mitigate risks from natural hazards and minimise impacts on places of environmental or cultural significance;
  - (c) Renewable energy facilities mitigate environmental harm and impacts on roads, accesses, traffic and sensitive uses during construction and decommissioning; and
  - (d) Renewable energy facilities are appropriately designed, sited, operated and landscaped to mitigate amenity impacts, such as dust, noise, light, glare or glint on surrounding sensitive uses, major roads, airports and urban areas.

**9.3.11.3 Assessment benchmarks**

**Table 9.3.11.3.1 Benchmarks for assessable development**

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

**12.3.11.19.3.12 Residential care facility and retirement facility code**

**12.3.11.19.3.12.1 Application**

This code applies to assessable development:

- (a) being a material change of use for a residential care facility or retirement facility; and
- (b) identified as requiring assessment against the Residential care facility and retirement facility code by the tables of assessment in Part 5 (Tables of assessment).

**12.3.11.19.3.12.2 Purpose and overall outcomes**

- (1) The purpose of the Residential care facility and retirement facility code is to ensure residential care facilities and retirement facilities:
  - (a) are appropriately located to meet the particular needs of residents;
  - (b) are designed in a manner which provides a comfortable and safe environment for residents; and
  - (c) protect the amenity of, and integrate with, surrounding premises.
- (2) The purpose of the Residential care facility and retirement facility code will be achieved through the following overall outcomes:
  - (a) a residential care facility or retirement facility is located where residents can have easy and direct access to public transport, community services and facilities;
  - (b) a residential care facility or retirement facility provides a home-like, non-institutional environment that promotes individuality, sense of belonging and independence;
  - (c) a residential care facility or retirement facility achieves a balance between providing specialised housing for residents, whilst providing the opportunity for residents to participate in the wider community;
  - (d) a residential care facility or retirement facility is designed to be integrated with surrounding development;
  - (e) a residential care facility or retirement facility is sited, such that there is ease of movement, safety and legibility for residents and visitors; and
  - (f) a residential care facility or retirement facility is designed, such that the comfort, safety, security, individuality, privacy and wellbeing of residents are promoted.

**12.3.11.19.3.12.3 Assessment benchmarks**

**Table 9.3.12.3.1 Benchmarks for assessable development**

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

### ~~12.3.12.9.3.13~~ **Rural activities code**

#### ~~12.3.12.19.3.13.1~~ **Application**

This code applies to accepted and assessable development identified as requiring assessment against the Rural activities code by the tables of assessment in Part 5 (Tables of assessment).

#### ~~12.3.12.29.3.13.2~~ **Purpose and overall outcomes**

- (1) The purpose of the Rural activities code is to facilitate rural uses and ensure Rural activities are developed in a sustainable manner, which conserves the productive characteristics of rural land and protects environmental and landscape values and the amenity of surrounding premises.
- (2) The purpose of the Rural activities code will be achieved through the following overall outcomes:
  - (a) Rural activities are undertaken on a sustainable basis;
  - (b) agricultural land is conserved and not alienated or encroached upon by incompatible land uses;
  - (c) uses that support rural production are established on suitable sites where environmental and amenity impacts can be effectively managed; and
  - (d) adverse impacts on the surrounding or downstream environments or natural environmental processes are avoided.

#### ~~12.3.12.39.3.13.3~~ **Assessment benchmarks**

**Table 9.3.13.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes                         |                                                                                                                                                                                                                                 | Acceptable Outcomes |                                                                                                                                               |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>General requirements</b>                  |                                                                                                                                                                                                                                 |                     |                                                                                                                                               |
| <b>PO1</b>                                   | The Rural activity is conducted on a lot that is of sufficient size to reasonably accommodate the use and mitigate potential nuisance arising from noise, dust, odour and other emissions or contaminants generated by the use. | <b>AO1.1</b>        | The lot is of an adequate size to sufficiently support the intended Rural activity.                                                           |
| <b>PO2</b>                                   | Buildings and structures associated with the Rural activity are sited and designed to avoid or minimise adverse visual impacts on the rural landscape.                                                                          | <b>AO2.1</b>        | Buildings and structures, other than a dwelling house, associated with the Rural activity are set back at least 10m from all site boundaries. |
| <b>Requirements for permanent plantation</b> |                                                                                                                                                                                                                                 |                     |                                                                                                                                               |
| <b>PO3</b>                                   | The plantation forest is located, such that it conserves the productive characteristics of agricultural land.                                                                                                                   | <b>AO3.1</b>        | The plantation forest is not located on agricultural land identified on the Overlay map – <del>AL-04:29</del> Agriculture land overlay.       |
| <b>Requirements for roadside stall</b>       |                                                                                                                                                                                                                                 |                     |                                                                                                                                               |
| <b>PO4</b>                                   | The roadside stall is limited in scale and appropriate to a rural area.                                                                                                                                                         | <b>AO4.1</b>        | Produce sold at the roadside stall is limited to that which is grown or produced on the site.                                                 |
|                                              |                                                                                                                                                                                                                                 | <b>AO4.2</b>        | The roadside stall does not involve the sale of                                                                                               |

| Performance Outcomes |                                                                                                       | Acceptable Outcomes |                                                                                                                                                                                                                                                                              |
|----------------------|-------------------------------------------------------------------------------------------------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      |                                                                                                       |                     | manufactured goods, other than those manufactured on the site.                                                                                                                                                                                                               |
|                      |                                                                                                       | <b>AO4.3</b>        | Buildings and structures associated with the roadside stall:<br>(a) are constructed along the property boundary;<br>(b) occupy not more than 10m <sup>2</sup> GFA; and<br>(c) are constructed of materials that can easily be dismantled following the cessation of the use. |
|                      |                                                                                                       | <b>AO4.4</b>        | The roadside stall is ancillary to a Rural activity occurring on the same site.                                                                                                                                                                                              |
| <b>PO5</b>           | The roadside stall does not have an adverse impact on the safety and functioning of the road network. | <b>AO5.1</b>        | The roadside stall is located on a site adjoining a road other than a State controlled road.                                                                                                                                                                                 |
|                      |                                                                                                       | <b>AO5.2</b>        | The location of the road side stall provides sufficient area for parking and for the safe entry and exit of vehicles from the site.                                                                                                                                          |
| <b>PO6</b>           | Signage associated with the roadside stall is small, unobtrusive and appropriate to a rural location. | <b>AO6.1</b>        | Not more than 1 sign is erected on the premises and the sign:<br>(a) has a maximum sign face area of 0.5m <sup>2</sup> per side; and<br>(b) is not illuminated or in motion.                                                                                                 |

**Table 9.3.13.3.2 Benchmarks for assessable development**

| Performance Outcomes                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Requirements for intensive Rural activities (Animal keeping, Aquaculture, Intensive animal industry, Intensive horticulture and Rural industry)</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                     |                                                                                                                                                                                                                                                                                                                            |
| <b>PO1</b>                                                                                                                                             | The intensive Rural activity is sited and designed on a lot of sufficient area to:<br>(a) accommodate the use, including buildings, pens, ponds, other structures and waste disposal areas involved in the use;<br>(b) provide for adequate setbacks to:<br>(i) road frontages;<br>(ii) site boundaries;<br>(iii) sensitive uses on surrounding land; and<br>(iv) waterways or wetlands; and<br>(c) avoid or minimise adverse visual impacts on the rural landscape. | <b>AO1.1</b>        | The intensive Rural activity is located on a site, which has a minimum area and setbacks complying with Table 9.3.13.3.3 Siting and setback requirements for intensive Rural activities unless for a:<br><del>(a)</del> <u>(a)</u> Caretakers accommodation; or<br><del>(b)</del> <u>(b)</u> Rural workers' accommodation. |
| <b>PO2</b>                                                                                                                                             | The intensive Rural activity is located on a site, which is sufficiently separated from any                                                                                                                                                                                                                                                                                                                                                                          | <b>AO2.1</b>        | The intensive Rural activity is located on a site, which is not less than:                                                                                                                                                                                                                                                 |

**9.3.14 Rural tourism code**

**9.3.14.1 Application**

This code applies to accepted and assessable development identified as requiring assessment against the Rural tourism code by the tables of assessment in Part 5 (Tables of assessment).

**9.3.14.2 Purpose and overall outcomes**

- (1) The purpose of the Rural tourism code is to ensure uses supporting the tourism industry are appropriately located and designed in a manner which meets the needs of visitors, preserves natural ecological systems and cultural heritage, promotes natural amenity, promotes the Whitsunday tourism brand and protects the on-going operation of surrounding Rural activities; and
- (2) The purpose of the Rural tourism code will be achieved through the following overall outcomes:
  - (a) development is located in proximity of horticultural hubs, areas of high natural amenity, key natural assets and cultural or historic sites in the Region;
  - (b) development is designed and sited to minimise impacts on nearby dwellings and the productive use of agricultural land;
  - (c) development is of a scale and intensity that is compatible with, and subservient to, the rural or natural setting and the prevailing character of the local area; and
  - (d) development is provided with appropriate utilities and services for visitors.

**9.3.14.3 Assessment benchmarks**

**Table 9.3.14.3.1 Benchmarks for accepted and assessable development**

| <b><u>PO10</u></b>          | <u>Development manages impacts on neighbouring properties from dust, noise and traffic associated with vehicular movement to and from the development.</u> | <b><u>AO10.1</u></b>       | <p><u>Development must:</u></p> <p><u>(a) ensure access and parking areas provide dense vegetation on all sides, if within 50m of a neighbouring sensitive use;</u></p> <p><u>or</u></p> <p><u>(b) ensure access and parking areas are sealed, if within 50m of a neighbouring sensitive use.</u></p> <p><u>Note – Where demonstrating effective use of mini-buses to service development, a car parking dispensation may be granted. Traffic impact assessment report prepared in accordance with PSP SC6.7 (Growth management) may assist in demonstrating compliance with the performance outcome.</u></p> |

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

### ~~12.3.13.15~~ **12.3.15 Sales office code**

#### ~~12.3.13.15.1~~ **12.3.15.1 Application**

This code applies to accepted and assessable development:

- (a) being a material change of use for a sales office; and
- (b) identified as requiring assessment against the Sales office code by the tables of assessment in Part 5 (Tables of assessment).

#### ~~12.3.13.29.3.15.2~~ **12.3.15.2 Purpose and overall outcomes**

- (1) The purpose of the Sales office code is to ensure sales offices are temporary in nature and are developed in a manner, which protects the amenity of surrounding premises.
- (2) The purpose of the Sales office code will be achieved through the following overall outcomes:
  - (a) the siting, layout, design and operation of a sales office is commensurate to, and does not adversely impact upon, the character and amenity of the surrounding area; and
  - (b) a sales office is operated for a temporary duration only.

#### ~~12.3.13.39.3.15.3~~ **12.3.15.3 Assessment benchmarks**

**Table 9.3.15.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes        |                                                                                                                                                                                                                   | Acceptable Outcomes |                                                                                                                                                                                                                                                                              |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Operational characteristics |                                                                                                                                                                                                                   |                     |                                                                                                                                                                                                                                                                              |
| PO1                         | The duration of the use of premises for a sales office does not extend beyond a reasonable period.                                                                                                                | AO1.1               | A sales office, where: <ul style="list-style-type: none"> <li>(a) a display dwelling, display village or estate sales office, operates for a maximum period of 2 years; or</li> <li>(b) a dwelling offered as a prize, operates for a maximum period of 6 months.</li> </ul> |
|                             |                                                                                                                                                                                                                   | AO1.2               | Any temporary building or structure associated with the operation of the sales office is removed from the site within 14 days of the end of the period of operation and the site is left in a clean and tidy condition.                                                      |
| PO2                         | Where the temporary use of a sales office is contained within a structure intended to become a genuine residential dwelling, it is constructed in accordance with the relevant requirements for the ultimate use. | AO2.1               | Where a sales office is located in a Class 1 building (Dwelling house) this dwelling must comply with Part 9.3.5 Dwelling house code.                                                                                                                                        |
| PO3                         | The location, hours of operation and activities of the sales office does not adversely affect the amenity of nearby existing and                                                                                  | AO3.1               | A sales office: <ul style="list-style-type: none"> <li>(a) is located at the major entry to the development site;</li> <li>(b) only operates between 8.00am and 6.00pm; and</li> </ul>                                                                                       |

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

### **12.3.14.19.3.16 Service station code**

#### **12.3.14.19.3.16.1 Application**

This code applies to assessable development:

- (a) being a material change of use for a service station; and
- (b) identified as requiring assessment against the Service station code by the tables of assessment in Part 5 (Tables of assessment).

#### **12.3.14.19.3.16.2 Purpose and overall outcomes**

- (1) The purpose of the Service station code is to ensure service stations are developed in appropriate locations and in a manner, which meets the needs of users, provides safe access and protects the environment and amenity of surrounding premises.
- (2) The purpose of the Service station code will be achieved through the following overall outcomes:
  - (a) a service station is established at a suitable location, on a site that is capable of accommodating all necessary and associated activities;
  - (b) a service station does not adversely impact upon the amenity of the surrounding local area;
  - (c) a service station incorporates a high standard of built form and landscaping;
  - (d) a service station is provided with safe and convenient access to the road network;
  - (e) a service station incorporates appropriate environmental management measures; and
  - (f) minimises the risk of land, ground and surface water contamination.

#### **12.3.14.19.3.16.3 Assessment benchmarks**

**Table 9.3.16.3.1 Benchmarks for assessable development**

| Performance Outcomes                     |                                                                                                                                                                                                     | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                  |

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

~~12.3.15.3.17~~ **Short-term accommodation and Multi-unit uses code**

~~12.3.15.19.3.17.1~~ **Application**

This code applies to assessable development identified as requiring assessment against the ~~Short-term accommodation and Multi-unit uses code~~ by the tables of assessment in Part 5 (Tables of assessment).

~~12.3.15.29.3.17.2~~ **Purpose and overall outcomes**

- (1) The purpose of the ~~Short-term accommodation and Multi-unit uses code~~ is to ensure ~~Short-term accommodation and Multi-unit uses~~ are of a ~~high quality~~ design, ~~and which~~ appropriately ~~responds~~ integrate with local character, environment and amenity ~~considerations~~.
- (2) The purpose of the ~~Short-term accommodation and Multi-unit uses code~~ will be achieved through the following overall outcomes:
  - (a) ~~a multi-unit use development~~ is visually attractive ~~with a built form that~~ addresses the street and integrates with surrounding development;
  - (b) ~~a multi-unit use incorporates building design that responds to the character of the local area~~ development minimises residential amenity impacts on the surrounding area;
  - (c) ~~development a multi-unit use~~ incorporates high quality landscaping and well designed, useable communal and private open space areas, that provide visual relief to the built form;
  - (d) ~~development a multi-unit use~~ provides a high standard of privacy and amenity for residents; and
  - (e) ~~a multi-unit use is supported by~~ infrastructure and services are provided, commensurate with the scale of the use and its location.

~~12.3.15.39.3.17.3~~ **Assessment benchmarks**

**Table 9.3.17.3.1 Benchmarks for assessable development**

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

**~~12.3.16.9.3.18~~ 12.3.18 Telecommunications facility code**

**~~12.3.16.19.3.18.1~~ 12.3.18.1 Application**

This code applies to accepted and assessable development:

- (a) being a material change of use for a telecommunications facility; and
- (b) identified as requiring assessment against the Telecommunications facility code by the tables of assessment in Part 5 (Tables of assessment).

Editor’s note—this code primarily deals with telecommunications facilities involving the erection of a telecommunications tower.

Note- Telecommunications requirements for fibre-ready pit and pipe infrastructure are detailed under Part 20A of the Telecommunications Act 1997 or check Council’s website for further assistance.

**~~12.3.16.29.3.18.2~~ 12.3.18.2 Purpose and overall outcomes**

- (1) The purpose of the Telecommunications facility code is to ensure telecommunication facilities are developed in a manner, which protects public health, the environment and the amenity of surrounding premises.
- (2) The purpose of the Telecommunication facility code will be achieved through the following overall outcomes:
  - (a) a telecommunications facility is located with compatible uses and facilities;
  - (b) a telecommunications facility does not adversely impact upon community wellbeing;
  - (c) a telecommunications facility does not adversely affect the amenity of surrounding premises;
  - (d) a telecommunications facility is visually integrated with its natural, rural or townscape setting; and
  - (e) a telecommunications facility is sited and constructed to minimise detrimental environmental impacts.

**~~12.3.16.39.3.18.3~~ 12.3.18.3 Assessment benchmarks**

**Table 9.3.18.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes          |                                                                                                                                            | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                                 |

**12.29.4 Other development codes**

**12.2.19.4.1 Advertising devices code**

**12.2.1.19.4.1.1 Application**

This code applies to accepted and assessable development identified as requiring assessment against the Advertising devices code by the tables of assessment in Part 5 (Tables of assessment).

**12.2.1.29.4.1.2 Purpose and overall outcomes**

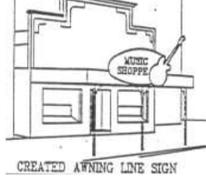

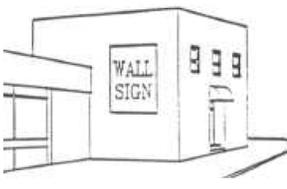

- (1) The purpose of the Advertising devices code is to ensure that advertising devices are established in a manner, which is consistent with the desired character and amenity of the Whitsunday region.
- (2) The purpose of the Advertising devices code will be achieved through the following overall outcomes:
  - (a) an advertising device complements and does not detract from the desirable characteristics of the natural and built environment in which the advertising device is exhibited;
  - (b) an advertising device is designed and integrated into the built form to minimise visual clutter;
  - (c) an advertising device does not adversely impact on the visual amenity of a heritage or neighbourhood character area or public open space;
  - (d) an advertising device does not adversely impact on the amenity of rural, rural residential or residential areas;
  - ~~(e)~~ an advertising device does not pose a hazard for pedestrians, cyclists or drivers of motor vehicles;
  - ~~(e)~~~~(f)~~ an advertising device that is only visible from an elevated location or the air, such as sky signs and written roof signs, are avoided; and
  - ~~(f)~~~~(g)~~ an advertising device accommodates the legitimate need to provide directions and business identification in a manner that is consistent with achieving overall outcomes (a) to ~~(fe)~~ above.

**12.2.1.39.4.1.3 Description of advertising devices**

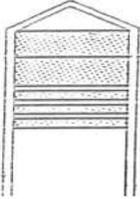

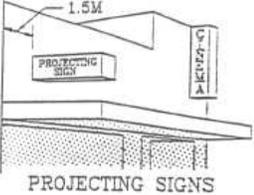

**Table 9.4.1.3.1 Description of advertising device types**

| Advertising device type | Written description                                                            | Pictorial description                                                                |
|-------------------------|--------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| Above awning sign       | An advertising device located on top of and attached to an awning or verandah. |  |

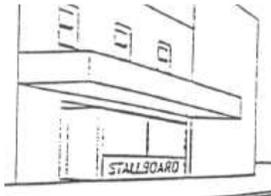

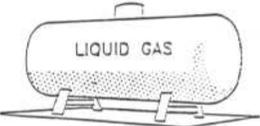

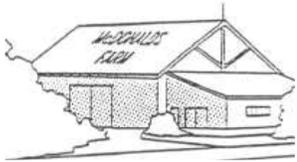

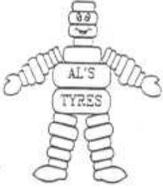

| Advertising device type             | Written description                                                                                                                                                 | Pictorial description                                                                |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| Awning fascia or return fascia sign | An advertising device painted or otherwise affixed to a solid or flexible material suspended from an awning, verandah or wall.                                      |    |
| Blind sign                          | An advertising device painted or otherwise affixed to a solid or flexible material suspended from an awning, verandah or wall.                                      |    |
| Business name plate                 | An advertising device displaying the name, occupation and contact details for the business occupant, which may also include the hours of operation of the business. |   |
| Canopy sign                         | An advertising device painted on a canopy structure.                                                                                                                |  |
| Created awning sign                 | An advertising device positioned on the face, or aligned with the face of an awning, where the shape interrupts the natural line of the awning.                     |  |
| Flush wall sign                     | An advertising device painted or otherwise affixed upon, and confined within, the limits of a wall.                                                                 |  |

| Advertising device type | Written description                                                                                                                                                                                                                                                                                                                                                                           | Pictorial description                                                                |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| Freestanding sign       | <p>An advertising device that is independent of a building and is supported by one or more columns, poles or pylons. The term includes devices containing third party advertising.</p> <p><u>Note - Freestanding sign includes billboard and pylon signs, where a billboard sign has a surface area wider than it is tall and a pylon sign has a surface area taller than it is wide.</u></p> |    |
| Ground sign             | <p>An advertising device that is independent of a building that is normally erected at a driveway entrance to identify the business or points of entry.</p>                                                                                                                                                                                                                                   |    |
| Hamper sign             | <p>An advertising device painted or otherwise affixed above the door head or its equivalent height and below the awning level or verandah of a building.</p>                                                                                                                                                                                                                                  |   |
| Projecting sign         | <p>An advertising device attached and mounted at a right angle to the façade of a building.</p>                                                                                                                                                                                                                                                                                               |  |
| Sky sign                | <p>An advertising device placed at or near the top of a building and projecting above the building.</p>                                                                                                                                                                                                                                                                                       |  |

| Advertising device type                        | Written description                                                                                                                                                                                                                                                              | Pictorial description                                                                |
|------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| Stallboard sign                                | An advertising device located below the ground level window of a building.                                                                                                                                                                                                       |    |
| Structure sign                                 | An advertising device painted or otherwise affixed to any structure, which is not a building.                                                                                                                                                                                    |    |
| Written roof sign                              | An advertising device painted or otherwise affixed to the roof cladding of a building.                                                                                                                                                                                           |   |
| Three dimensional replica object or shape sign | An advertising device that replicates a real world object or shape. The replica may be enlarged, miniaturised or equal in scale and be freestanding or form part of another advertising device.                                                                                  |  |
| Under awning sign                              | An advertising device attached or suspended under an awning or verandah.                                                                                                                                                                                                         |  |
| Window sign                                    | An advertising device painted or otherwise affixed to the exterior or on the inner surface of a glazed area of any window. It includes any devices that are suspended from the window frame. The term does not include product displays or showcases for viewing by pedestrians. |  |

In accordance with Table 9.4.1.4.1. | Not applicable.   |

**12.2.29.4.2 Construction management code****12.2.2-19.4.2.1 Application**

This code applies to accepted and assessable development identified as requiring assessment against the Construction management code by the tables of assessment in Part 5 (Tables of assessment).

**12.2.2-29.4.2.2 Purpose and overall outcomes**

- (1) The purpose of the Construction management code is to ensure that development works meets the needs of the development and is undertaken in a sustainable manner in accordance with best practice.
- (2) The purpose of the Construction management code will be achieved through the following overall outcomes:
  - (a) works are undertaken such that environmental harm and nuisance resulting from construction activities is avoided or minimised and the environmental values of water are protected;
  - (b) development is designed and constructed to a standard that meets community expectations, maintains public health and safety, prevents unacceptable off-site impacts and minimises whole of life cycle costs; and
  - (c) development does not compromise or interfere with the integrity or function of existing utilities, road or infrastructure.

**12.2.2-39.4.2.3 Assessment benchmarks****Table 9.4.2.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes    |                                                                                                                               | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                           |

Whitsunday Regional Council Planning Scheme – Part 9 – ~~July 2017~~ November 2021 (V4.01)

### ~~12.2.3~~ **19.4.3** Excavation and filling code

#### ~~12.2.3~~ **19.4.3.1** Application

This code applies to accepted and assessable development identified as requiring assessment against the Excavation and filling code by the tables of assessment in Part 5 (Tables of assessment).

#### ~~12.2.3~~ **19.4.3.2** Purpose and overall outcomes

- (1) The purpose of the Excavation and filling code is to ensure that development works meets the needs of the development and is undertaken in a sustainable manner in accordance with best practice.
- (2) The purpose of the Excavation and filling code will be achieved through the following overall outcomes:
  - (a) excavation and filling is completed to a standard that meets community expectations, maintains public health and safety, prevents unacceptable off-site impacts and minimises whole of life cycle costs; and
  - (b) excavation and filling does not adversely or unreasonably impact on the natural environment, drainage conditions or adjacent properties.

#### ~~12.2.3~~ **19.4.3.3** Assessment benchmarks

**Table 9.4.3.3.1 Benchmarks for accepted and assessable development**

| Performance Outcomes |                                                                                                                                                                                                                                                                                                                | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
