**ADDENDUM TO WATER  
SUPPLY CODE OF AUSTRALIA  
WSA 03-2002**

## **2.1 SYSTEM PLANNING PROCESS**

### **2.1.1 Extending on Existing Water Supply Scheme**

Where a water supply network simulation model exists Council shall assess the impacts of the proposed development on the existing water supply system. The assessment shall be based on the details of the system extension provided by the Consulting Engineer.

## **2.2 DEMANDS**

Refer to Section DG 5.7 – Design Criteria of this Manual for the water supply demand requirements to be adopted in design.

### **2.4.3 Operating Pressures**

Refer to Section DG 5.7 – Design Criteria of this Manual for operating pressure parameters to be adopted in design.

## **2.6 PUMPING STATIONS**

### **2.6(c) Standby Arrangements:**

Council requires standby pump units to be provided. The standby capacity shall be as directed by Council.

The power supply to pumping stations shall have 50% spare capacity for future upgrading and be electrically configured such that the pumping station can operate from an emergency generator supply at times of power failure (thus, a provision of space in the switchboard for a manual ATS change over panel is required).

## **2.7 SERVICE RESERVOIRS**

Refer to Section DG 5.7 – Design Criteria of this Manual for storage parameters.

## **2.10 CONCEPT PLAN**

Refer to Section AP 1.28 – Water Reticulation Concept Plan of this Manual for requirements for a Concept Plan.

### **3.2.3 Empirical sizing of reticulation mains**

Table 3.1 is not to be used for sizing of reticulation mains. Refer to Section DG 5.7 – Design Criteria of this Manual for population and design flow requirements.

#### **3.2.5.3 Hydraulic Roughness Valves**

Refer to Section DG 5.7 – Design Criteria of this Manual for roughness values to be used in design.

The Hazen-Williams formula is to be used for head loss calculations.

### **3.7.2 Minimum pressure class**

The minimum class for pipe and fittings shall be PN 16.

### 3.8 PIPELINE MATERIALS

Pipes used for water mains shall comply with the following table.

| Nominal Size DN                     | Type of Pipe                   | Class of Pipe                                            |
|-------------------------------------|--------------------------------|----------------------------------------------------------|
| 63, 90<br>100 150, 200, 250,<br>300 | MDPE<br>PVC, PVC-M & PVC-<br>O | Series 1 PE100 – SDR11 MIN PN<br>12<br>Series 2 MIN PN12 |
| 100, 150, 200, 250,<br>300          | Ductile Iron                   | PN20, K9 & K12                                           |

#### 4.1.1 Design Tolerances

Horizontal alignment shall be referenced to the MGA co-ordinate system.

### 4.3 LOCATION OF WATER MAINS

#### 4.3.1 General

The location and alignment of water mains shall generally be in accordance with Council's Standard Drawing.

#### 4.4 SHARED TRENCHING

Shared trenching shall not be specified without prior approval of Council.

#### 4.6 RIDER MAINS

Rider mains are not permitted.

#### 4.7 CONNECTION OF NEW MAINS TO EXISTING MAINS

The connection of new water reticulation to Councils existing system is to be at the Developer's expense.

Council staff shall undertake all connections to Council's water infrastructure. The Contractor shall not carry out the connection unless Council gives special approval in exceptional circumstances.

#### 4.8.3 Permanent ends of water mains

Dead Ends to water mains should be avoided. However, should Dead Ends be unavoidable, the following facilities shall be constructed to facilitate scouring of the lines;

- For mains 100m diameter or greater a hydrant shall be positioned at the end of the line.

#### 4.10.7 Deviation of mains around structures

Deviation of mains around other structures shall only be permitted as a fully flanged offset complete with 1.200m tail pieces.

### 6.7 SWABBING POINTS

Swabbing points shall be provided where specified by Council.

#### 6.8.3 Hydrant types

Hydrants shall be the spring hydrant "Maxi Flow" 2000 type (DN80) manufactured in accordance with AS 3952 by an Australian Standards quality endorsed company.

Hydrants are to be coated with a thermosetting epoxy powder to AS 2638 and AS 3952.

#### **6.8.7 Hydrant Spacing**

The maximum spacing between hydrants shall be 80 metres.

#### **7.3 RECORDING OF WORK AS-CONSTRUCTED INFORMATION**

As constructed information shall conform to Section CP 1.21 – Operational Works Construction Procedures of the WSC Development Manual.

#### **11.5.4.2 Traffic Management**

Traffic management shall be in accordance with the requirements of the authority responsible for the roads where construction activities are carried out.

#### **15.2.3 Bending Pipe**

Bending of pipes is not permitted.

**ADDENDUM TO SEWERAGE  
CODE OF AUSTRALIA  
WSA 02-2002**

**2.3.1 Loading per Serviced Property**

Refer to Section DG 6.8 - Design Criteria of this Manual.

**2.3.2 Assessment of future loads**

Refer to Section DG 6.8 - Design Criteria of this Manual.

**3.1 DESIGN FLOW ESTIMATION**

Refer to Section DG 6.8 - Design Criteria of this Manual.

**3.2 DESIGN FLOW ESTIMATION METHOD**

Refer to Section DG 6.8 – Design Criteria of this Manual.

**4.2.5 Easements**

Refer to Section DG 6.12 – Dedication of Land, Easements and Permits to Enter of this Manual.

**4.3.7 Horizontal Curves in Sewers**

Horizontal curves in sewers are not permitted.

**4.5.3 Minimum Air Space for Ventilation**

Refer to Section DG 6.8 – Design Criteria of this Manual.

**4.5.4 Minimum pipe sizes for maintenance purposes**

Refer to Section DG 6.13 – Property Connections in this Manual.

**4.5.7 Minimum Grades for Self Cleansing**

Refer to Section DG 6.8 – Design Criteria of this Manual.

**4.6.5 Minimum Depth of Sewer Connection Point**

The sewer shall be deep enough to drain the entire lot except where a private pump station is approved on the lot.

**4.6.7 Vertical Curves**

Vertical curves are not permitted.

**4.6.8 Compound Curves**

Compound curves are not permitted.

**5.2 LIMITS OF CONNECTION TO SEWERS**

Add: connections into manholes will be permitted at end of lines only, elsewhere connections are required in line only.

### **5.3 METHODS OF PROPERTY CONNECTION**

The methods of property connection shall be as per Council's Standard Drawing

### **5.5 NUMBER OF PROPERTY CONNECTIONS**

#### **5.5.2 Multiple Occupancy Lots**

An application shall be made at design stage for determination of servicing method.

### **5.6 LOCATION OF CONNECTION POINTS**

#### **5.6.1 Undeveloped lots**

Property connections should generally be located at the lowest corner of the allotment between 0.5 and 1.5m upstream of the allotment boundary or manhole.

Where a sewer main lies within an adjoining allotment, the property connection is to extend a distance of 1.0m into the allotment. For battle-axe allotments with the property connection located within the access, the property connection shall extend along the access to a point 1.0m within the main part of the allotment or, where a sealed driveway is required for the full length of the hatchet 'handle' then 1m past the extents of the driveway to allow a suitable future point of connection. Where a sewer is contained within a stormwater drainage easement, then the property connection should extend a minimum of 1m past the easement boundary and into the lot it is serving. All property connections should be finished a minimum of 1m clear of any infrastructure.

### **5.7 Y – PROPERTY CONNECTIONS**

Y-property connections are not permitted.

## **6. MAINTENANCE STRUCTURES**

#### **Table 6.1**

The use of horizontal and vertical bends is not permitted.  
The use of Maintenance shafts shall be by conditional approval only.  
The use of terminal maintenance shafts is not permitted.

### **6.3.2 Maintenance Structure Spacing – Reticulation Sewers**

The maximum distance between any two consecutive maintenance structures shall be 90m.

### **6.6.3 Design Parameters for MHs**

External drops are not permitted for use with precast manholes.

### **6.6.4 Property Connections in MHs**

Property connections must not be connected into maintenance holes.

### **6.6.8 Ladders Step Irons and Landings**

Ladders, step irons and landings are not required.

## **6.7 MAINTENANCE SHAFTS**

### **6.7.1 General**

The use of maintenance shafts is permitted, subject to approval in reticulation sewers subject to the design parameters detailed in this Manual and WSA 02-2002.

### **6.7.2 Design Parameters for MSs and TMSs**

The following design parameters apply to maintenance shafts and terminal maintenance shafts in addition to or instead of those detailed in WSA 02-2002.

- Sizing and installation of maintenance shafts to generally comply with the manufacturers recommendations.
- Maintenance shafts shall be graded to the intersection point of the sewer main and maintenance shaft coupling/bend/fitting.
- Maintenance shafts may be used on 100mm, 150mm and 225mm diameter sewer mains and house connection branches only.
- Maintenance shafts shall be used to a maximum depth of 3.0m.
- Maintenance shafts must be supported on a concrete cradle/surround.
- Testing of maintenance shafts shall generally be carried out in conjunction with the testing of the sewer main.
- Property connection branch inspection tees shall be 200mm clear of the centre of the Maintenance Shaft.
- Property connections must not be made into maintenance shafts.
- Maintenance shafts must be provided with a 600mm dia Ductile Iron Class B cover located within a precast surround. The trench bedding material shall extend below the shaft inspection opening surround.
- A maximum of five (5) Maintenance Shafts will be permitted between two conventional maintenance holes with a total length of sewer of not more than 250m between maintenance holes.
- Maintenance Shafts shall be located with a maximum spacing of 50 metres to an adjoining structure.

Maintenance shafts are not permitted in the following locations:

- As the receiving manhole at a pumping/lift station;
- As a discharge manhole for a rising main;
- Within roadway central medians, roundabouts or within kerb and channel;
- As the connection structure for future development stages;
- In an area zoned Industrial, Commercial, or Multi-unit.

## **7.2 WATER SEALS, BOUNDARY TRAPS AND WATER – SEALED MH'S**

Water seals are not required.

## **7.3 GAS CHECK MH'S**

Gas check MH's are not required.

## **7.4 VERTICAL AND NEAR VERTICAL SEWERS**

Prior approval must be obtained from Council for the use of vertical or near vertical sewers.

## **7.7 VORTEX INLETS AND WATER CUSHIONS**

Prior approval must be obtained from Council for the use of water inlets and water cushions.

**7.8 INVERTED SYPHONS**

The use of inverted syphons is not permitted.

**7.10 FLOW MEASURING DEVICES**

Flow measuring devices are not required to be installed. Notwithstanding this provision shall be made in the design of the valve chamber to allow the future installation of an electromagnetic flowmeter.

**7.11 WET WEATHER STORAGE**

Prior approval must be obtained from Council for using wet weather storage as a means of reducing downstream infrastructure.

Appendix D  
Standard Conditions for  
Water Supply Above RL50

#### WATER SUPPLY

1. The water supply system shall be designed in accordance with Water Resources Commission Guidelines and amendments, Council's Development Manual, Council's Standard Drawings, and to the requirements of the Council's Water Supply and Sewerage Engineer. Similarly, adherence to Acts, Regulations, relevant standards and Council's ByLaws is required.

#### RESERVOIRS

2. The reservoir is to be reinforced concrete cast insitu with a concrete roof, as per Whitsunday Regional Council, Standard Drawings and notes, fully secured and to the full satisfaction of Council's Water and Sewerage Engineer.
3. The land on which the reservoir is constructed and sufficient surrounding land, 4 meters minimum, shall be dedicated to Council at no cost to Council.
4. A 240v power supply shall be provided to the reservoir site.
5. A suitable sealed access and turning area shall be constructed and dedicated to Council at no cost to Council, in accordance with Council's Development Manual.
6. The access road to the reservoir is not to be utilised as a common access. Land in which the access road is situated is to be dedicated to Council at no cost to Council.
7. The gradient of the access road is not to exceed 20%.
8. Storm water layout with details of overflow / scour / underdrainage flow path is to be identified.
9. Security fence details are to be provided.

#### PUMP STATION BUILDING

10. The reservoir is to be reinforced concrete cast insitu with a concrete roof, as per Whitsunday Regional Council, Standard Drawings and notes, fully secured and to the full satisfaction of Council's Water and Sewerage Engineer.
11. The land on which the pump station is constructed and sufficient surrounding land, 3 meters minimum, shall be dedicated to Council at no cost to Council.
12. The finished floor level of the pump station should be self draining and no less than 200mm above the surrounding finished ground level.
13. Should be situated at a suitable RL AHD so that the return gravity system does not exceed to maximum head recommended by the Water Resources Commission Guidelines.
14. Provision is to be made within the building, opening to external, for a suitable sized room to house the disinfection equipment and storage tank. The room shall be independent of all mechanical and electrical equipment.
15. Pump control room is to be fitted with sufficient ventilation to allow air flow within the room.
16. A suitable sealed access and hard standing area shall be provides and constructed as per Council's Development Manual.
17. Security fence details are to be provided.
18. Building to be sized to house the following but not limited to:
  - a. Duty / Stand-by pump arrangement.
  - b. Electromagnetic type flow metering. (ie. Kent or combined Instruments).
  - c. Control cabinet and switching equipment as per council's standard specifications.

- d. Telemetry connected and commissioned to be fully compatible with Councils existing telemetry control system.
- e. Low pressure safety cut out switch on the suction side of the pumping system, shall be installed in a manner so that it can be isolated from the main and release the pressure to test the suitability without having to close down the water supply to the pumps.
- f. Room to house the disinfection equipment.

#### PUMPS

- 19. For calculating the duty head of the pump please note that the BWL of the Cannonvale reservoir is at RL 72.
- 20. Duty / Stand-by pump arrangement is to be provided. They must be able to run in parallel if required.
- 21. Pumps must be fitted with mechanical seals.
- 22. Reflux valves shall be on the discharge side of the pump.
- 23. Valving is to be provided so each pump can be isolated and removed if necessary should the case arise.
- 24. Vacuum and pressure gauges are to be fitted.
- 25. Pumps and system should be protected against water hammer.
- 26. All pumping equipment is to be new.

#### POWER TO THE SITE

- 27. All power used up until the project is placed on maintenance shall be the developer's responsibility. At On Maintenance the developer shall have the Ergon account transfer to Council.

#### PIPEWORK

- 28. All appropriately sized pipe work into / out of the pump station and pipe work associated with the pump connections shall be DLCL and fully flanged.
- 29. A dedicated rising main, appropriated sized, of K9 DICL shall link the pump station to the reservoir.
- 30. All gravity mains, appropriately sized, may be uPVC Class 16.
- 31. Water mains are to be installed on the topside of the road, in natural ground, where possible.
- 32. Horizontal separation of the rising main and the gravity main shall be maintained at 300mm.
- 33. Any under-boring of main roads shall utilise 6mm steel for the sleeve as a minimum or as their approval.
- 34. Long section of the main on the suction side of the pumps shall be submitted, to ensure air locks can not affect the performance of the pumps.

#### DISINFECTION

- 35. Disinfection facilities (sodium hypochlorite) to be provided should include but not limited to:
  - a. Adequate sized room to house all equipment to comply with WHS regulations.

- b. Adequate sized storage tank complete with an approved measuring device
- c. Pumping equipment with adequate pumping capacity to maintain a chlorine residual in the reticulation system to the satisfaction of Council.
- d. Bunding details, pump out pit (300 x 300 x 200mm deep) and the method of sealing all of the concrete works and walls are to be provided
- e. The retractable injection quell shall be installed external to the building and suitably protected from damage.
- f. The injection point is to be installed on the discharge side of the pumps.
- g. Provide an approved safety shower / eye wash basin in a secured area, external to the building.
- h. Provide a 20mm hose tap in a secured area.

#### CONSULTATION

- 36. It is essential that the applicant's water supply consultant discuss in full the system with Council's Water and Sewerage Engineer prior to and during the design phase.
- 37. An Elpro approved installation contractor is to be used for the telemetry system.

Appendix E  
Addendum to  
Gravity Sewerage Code of Australia  
WSA 02-2014

| <b>Gravity Sewerage Code Section Reference</b>    | <b>WRC Requirement</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 2.4.1 Loading per serviced lot                    | Refer Section DG 7.8 of this Manual                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2.4.2 Estimating future catchment loads           | Refer Section DG 7.8 of this Manual                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 3.2 Design Flow Estimation                        | Refer Section DG 7.8 of this Manual                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 3.3 Design Flow Estimation method                 | Refer Section DG 7.8 of this Manual                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 5.2.8 Easements                                   | Refer Section DG 7.12 of this Manual                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 5.3.8 Horizontal curves in sewers                 | Horizontal curves in sewers are not permitted                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 5.5.3 Minimum air space                           | Refer Section DG 7.8 of this Manual                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 5.5.4 Minimum pipe sizes for maintenance purposes | Refer Section DG 7.13 of this Manual                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 5.5.7 Minimum grades for self cleansing           | Refer Section DG 7.8 of this Manual                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 5.6.5 Minimum depth of sewer connection point     | The sewer shall be deep enough to drain the entire lot except where a private pump station is approved on the lot.                                                                                                                                                                                                                                                                                                                                                                                        |
| 5.6.7 Vertical curves                             | Vertical curves are not permitted                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 5.6.8 Compound curves                             | Compound curves are not permitted                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 6.2 Limits of connection to sewers                | Add: connections into manholes will be permitted at end of lines only, elsewhere connections are required in line only                                                                                                                                                                                                                                                                                                                                                                                    |
| 6.3 Methods of Property Connection                | The methods of property connection shall be as per Council's Standard Drawing No S-0030.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 6.4.2 Multiple Occupancy Lots                     | An application shall be made at design stage for determination of servicing method                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 6.5.2 Vacant Lots                                 | <p>Replace with: Property connections should generally be located at the lowest corner of the allotment between 0.5 and 1.5m upstream of the allotment boundary or manhole.</p> <p>Where a sewer main lies within an adjoining allotment, the property connection is to extend a distance of 1.0m into the allotment. For battle-axe allotments with the property connection located within the access, the property connection shall extend along the access to a point 1.0m within the main part of</p> |

|                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                           | the allotment or, where a sealed driveway is required for the full length of the hatchet 'handle' then 1m past the extents of the driveway to allow a suitable future point of connection. Where a sewer is contained within a stormwater drainage easement, then the property connection should extend a minimum of 1m past the easement boundary and into the lot it is serving. All property connections should be finished a minimum of 1m clear of any infrastructure. |
| 6.6.2 'Type 7 spur' or "Y" property connection sewers     | Y property connections are not permitted.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Table 7.1 Maintenance Structures                          | The Use of horizontal and vertical bends is not permitted.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 7.3.2 Maintenance Structure Spacing – Reticulation Sewers | The maximum distance between any two consecutive maintenance structures shall be 90m                                                                                                                                                                                                                                                                                                                                                                                        |
| 7.6.2 Types of Manhole Construction                       | Approved PE manholes may be used as a standard manhole for a pumping/lift station or as a discharge manhole for a pressure (rising) main. PE manholes are not permitted in the following locations: <ul style="list-style-type: none"> <li>- Within roadway central medians, roundabouts or within kerb &amp; channel;</li> <li>- As the connection structure for future development stages; and / or</li> <li>- In an area zoned Industrial or Commercial.</li> </ul>      |
| 7.6.3 Design Parameters for Manholes                      | Internal drops are not permitted for use with precast or any other manholes unless otherwise approved by Council.                                                                                                                                                                                                                                                                                                                                                           |
| 7.6.4 Property Connections in Manholes                    | Property connections must not be connected into maintenance holes except at end of line.                                                                                                                                                                                                                                                                                                                                                                                    |
| 7.6.9 Ladders Step Irons and Landings                     | Ladders, step irons and landings are not required.                                                                                                                                                                                                                                                                                                                                                                                                                          |

Appendix F  
Addendum to  
Sewerage Pumping Station Code of Australia

**Part 3 – Construction**

| Sewerage Pumping Station Code Section reference | WRC requirement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 25.1 Pump Lifting Chains                        | <ul style="list-style-type: none"> <li>- Lifting chains shall be fitted to each pump and shall be in accordance with AS 2321;</li> <li>- Eyebolts shall be in accordance with AS 2317 – galvanised;</li> <li>- Shackles in accordance with AS 2741 – galvanised;</li> <li>- Lifting eyes in accordance with AS 3776 – galvanised;</li> <li>- Lifting chain to be grade L – galvanised;</li> <li>- The lifting chain for pumps less than 1 tonne shall be 10mm link as a uniform standard;</li> <li>- Lifting chain for pumps weighing greater than 1 tonne shall be sized accordingly;</li> <li>- Provide a suitable bracket and hook in an out of the way location for hanging the chain; and</li> <li>- For checking and chain replacement, each pump station shall have an easily visible plaque mounted adjacent to the wet well stating length and weight of chain and the weight of the pump to which it is attached.</li> </ul> |
| 25.2 Brackets                                   | <ul style="list-style-type: none"> <li>- Provide stainless steel brackets for mounting of floats; and</li> <li>- Provide stainless steel brackets for fastening the level sensor stilling well.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

Appendix G  
Addendum to the  
Vacuum Sewerage Code of Australia WSA 06-2008

| Vacuum Sewerage Code Section reference | WRC requirement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5.3.1 General                          | Remove references to PVC-U and PVC-M – use PE pipe only                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 6.6.3 Generator Types                  | <p>Add the following:</p> <p>In larger stations (&gt;20 l/s), Liquid ring vacuum generators shall not be used. Oil filled vacuum generators are required. For stations &lt; 20 l/s, dry run vacuum generators are preferred.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 6.6.9 Air Handling Pipe Material       | Any pipe within the Vacuum Station designated for the handling of air or air sewage / water mixture shall be Stainless Steel 316L with wall thickness designed for the application.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 6.10 Noise                             | <p>Add the following:</p> <ul style="list-style-type: none"> <li>- In addition to noise environmental regulations to be met, the noise level in residential areas, measured as the Adjusted Maximum sound pressure level LA10adj, 10mins shall not be greater than the background noise level plus 3 dB(A) at the boundary of vacuum station lot;</li> <li>- In Industrial or Commercial areas it shall not be greater than the background noise level plus 8 dB(A). It will likely be necessary to provide sound attenuation construction within the building, sound rated doors and mufflers on pipes leading to the exterior of the building in order to meet requirements.; and</li> <li>- The developer shall perform noise studies before and after commissioning to demonstrate that requirements have been met.</li> </ul> |
| 6.11.2 Biofilters                      | <p>Add the following:</p> <ul style="list-style-type: none"> <li>- The odour control bed shall be roofed; and</li> <li>- The odour control bed shall have fitted over it an automatic sprinkler system with moisture control, to ensure that</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                      | the bed operates at an operator selectable moisture content                                                                                                                                                                                                                                                                                                                                                                                             |
| 8.3 Alarms (Table 8.1)                                                               | <p>Add the following:</p> <ul style="list-style-type: none"> <li>- Vacuum Generator HIGH TEMPERATURE. Provide a high temperature sensor for each of the Vacuum Generators which will both alarm and shut down the unit in the event of the temperature rising to a manufacturer recommended maximum set point.</li> </ul>                                                                                                                               |
| 16.1 Services                                                                        | <p>Add the following:</p> <ul style="list-style-type: none"> <li>- Tool Kit and Special Tools, as follows: Provide a tool kit with the station containing a range of tools which will allow the operator to perform the duties required to operate and maintain the system. Provide also any specialized tools required for the same purpose.</li> </ul>                                                                                                |
| 16.2 Vacuum Station Fixtures                                                         | <p>Add the following:</p> <ul style="list-style-type: none"> <li>- Provide a vacuum testing station on the workbench utilising the station vacuum in order to test valves and vacuum equipment after repair. Pipe and valve the test station appropriately.</li> </ul>                                                                                                                                                                                  |
| 26.2 Switchboard Installation (Clause 25.6.4.4 Cubicle Labels)                       | <p>Add the following:</p> <ul style="list-style-type: none"> <li>- Ensure pump labels match with the labelling of the pumps on the floor</li> </ul>                                                                                                                                                                                                                                                                                                     |
| 28.3 Installation of Pumping and Vacuum Generator Units (Clause 28.3.3 Unit Numbers) | <p>Add the following:</p> <ul style="list-style-type: none"> <li>- Ensure that Unit numbers match with the labelling numbers on the switchboard.</li> </ul>                                                                                                                                                                                                                                                                                             |
| Part 4 Standard Drawings                                                             | <p>Chamber series of drawings, VAC 1200, VAC 1201, VAC 1202, VAC 1203, VAC 1204 and VAC 1205:</p> <ul style="list-style-type: none"> <li>- Remove references to brickwork risers in the construction of the collection chambers. Brickwork is not permitted; and</li> <li>- To the vacuum layout series of drawings, VAC 1300 and VAC 1301, add the following: provide an appropriately sized suction line (minimum DN 200), from the Vacuum</li> </ul> |

|  |                                                                                                                                                                                                                                                       |
|--|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>Vessel to the outside of the building for a sucker truck connection. The suction line shall be valved outside the building to permit the draining of the Vacuum Vessel without the operator of the suction truck having to enter the building.</p> |

## **Preface**

The construction of sewage pumping stations and associated infrastructure must comply with the Water Services Association of Australia publication 'WSA 04-2005 Version 2.1 – Sewage Pumping Station Code of Australia' (the 'Code') except where the Code is amended by this document.

The following amendments, additions, deletions and alterations apply to and form part of the Code. Section and Clause numbers refer to those in the Code.

The standard drawings contained in the Code do not apply. Refer to the Whitsunday Regional Council standard drawings.

Ultimately, this document will include amendments, additions, deletions and alterations to Part 1 'Planning and Design' of the Code so as to form a complete supplement to the Code.

At this time the amendments, additions, deletions and alterations to Part 1 'Planning and Design' of the Code are included in the Whitsunday Regional Council this Appendix.

## **Glossary of Terms, Abbreviations and References**

### **REFERENCED DOCUMENTS**

*(Add the following)*

The latest edition of all referenced documents, including all amendments and supplements, are to be used.

The following documents are referred to in this Code:

- Queensland Development Code:  
MP1.4 – Building over or near relevant infrastructure
  
- Council Standard Drawings;
  
- WSAA Codes of Practice:  
WSA 02-2002 – Sewerage Code of Australia;  
WSA 04-2005 – Sewage Pumping Station Code of Australia; and  
WSA 101-2008 – Industry Standard for Submersible Pumps for Sewage Pumping Stations.
  
- Australian Standards; and
  
- Other Documents:  
'Planning Guidelines for Water Supply and Sewerage' (Department of Environment and Resource management, April 2010).

## Part 1: Construction

### 1 GENERAL

#### 1.1 Scope

*(Add the following)*

Any inconsistency or ambiguity between the various documents comprising this Specification shall be resolved by the adoption of those documents in the following order of precedence;

- Statutory Legislation;
- This Specification;
- Whitsunday Regional Council Standard Drawings;
- Whitsunday Regional Council Development Manual;
- Sewerage Code of Australia (WSA 04-2005 Version 2.1); and
- Australian Standards.

The work must comply with relevant Statutory Legislation, Codes of Practice, Australian Standards and Council's local laws, policies, guidelines and specifications.

This Specification applies in the construction of the various elements of a sewage pumping station system and a sewer rising main system which include, but are not limited to:

- sewage pumping stations of capacity up to and including 200litres / second;
- pressure mains of a size up to and including DN375;
- maintenance structures; and
- standard appurtenances.

Construction of gravity sewers and associated gravity maintenance structures shall be in accordance with the requirements of WSA 02-2002 'Sewerage Code of Australia' and Council's Development Manual.

#### 1.2 Interpretation

*(Add the following)*

**Asset Creation** means any or all aspects of the planning, design, construction, supervision of construction, testing and commissioning and eventual handover of sewerage infrastructure to Whitsunday Regional Council.

**Contractor** means a person, corporation, company, business or other legal entity bound under law to execute work under a contract or agreement. Contractor also means 'Constructor'.

**Council** means Whitsunday Regional Council and the Whitsunday Water & Waste business unit of Whitsunday Regional Council.

**Designer** means a Professional Engineer who is qualified in Queensland (currently met by a person being registered as a Registered Professional Engineer Queensland (RPEQ) and is competent to perform the engineering works required for the Asset Creation process on behalf of a Developer.

**Developer** means the person who has submitted a planning application for the provision of infrastructure under the Asset Creation process or for the utilisation of existing sewerage infrastructure.

**HOLD POINT** means a point beyond which work may not proceed without authorisation, and sign-off, by the Superintendent's representative and / or Whitsunday Regional Council's representative. Release of a hold point may also be subject to an inspection of works by the Superintendent's representative and / or Whitsunday Regional Council's representative.

**IDAS** means the Integrated Development Application System under the Sustainable Planning Act (SPA).

**Maintenance Structure** means manhole, maintenance hole, pressure main discharge chamber, receiving access chamber or non-entry maintenance chamber.

**MONITOR** means intermittent surveillance of any stage of the work in progress by the Superintendent and / or the Superintendent's Representative and / or the principal's representative and / or Whitsunday Regional Council's representative.

**SELF INSPECT** means the progressive verification of the quality, and/or adherence to construction specifications, by the constructor/service provider and Principal Constructor (Contractor) performing the work. Confirmation of completion of *Self Inspect* requirements shall be by constructor checklists sign-off.

**Surveyor** means a person, registered as a Surveyor (minimum Class – 'individual') with the Surveyors Board of Queensland under the Surveyors Act of Queensland, who is competent to perform the surveying work required of the works described in this document and the documents referenced herein.

**Sewer Reticulation** means sewer pipe work less than DN375 to which property connections are permissible.

**SCA** means Switch-gear and Control-gear Assembly and includes main switchboard, main distribution board, distribution board, control board, electrical kiosk, electrical panel, control panel or similar enclosure.

**SPA** means the Queensland Sustainable Planning Act 2009.

**The Code** means the Sewage Pumping Station Code of Australia (WSA 04-2005 Version 2.1) published by the Water Supply Association of Australia (WSAA).

**Trunk Mains** means pipe work equal to or greater than or equal to DN225 or rising mains with a diameter of greater than to or DN150 in diameter and to which property connections are not permissible or generally not present.

**WITNESS POINT** means a point beyond which work may not proceed without the Contractor notifying the Superintendent's representative and / or Whitsunday Regional Council's representative in order to provide the Superintendent's representative and / or Whitsunday Regional Council's representative with the opportunity to witness, and sign-off, an inspection or test an aspect of the work. The Superintendent's

Whitsunday Regional Council  
Construction Specification: Sewage Pumping Station

representative and / or Whitsunday Regional Council's representative, at their discretion, may authorise the inspection or test or aspect of the work to proceed without the Superintendent's representative and / or Whitsunday Regional Council's representative witnessing, and signing off, the inspection or test or aspect of the work.

**WRC** means the Whitsunday Regional Council.

## **2 QUALITY**

### **2.1 Quality Assurance**

#### **2.1.1 Quality Management System**

*(Add the following)*

Prior to works commencing the Contractor must submit to Council and / or the Superintendent evidence of third party certification of their quality system. The Superintendent shall submit all certification evidence to Council prior to works commencing.

Submission of certification evidence to the Superintendent constitutes a **HOLD POINT**. Release of the Hold Point, is subject to Council's and / or the Superintendent's review and confirmation of the certification, is required prior to works commencing.

#### **2.1.2 Inspection and Test Plans**

*(Add the following)*

Whitsunday Regional Council and / or the Superintendent may at their discretion instruct the Constructor to add additional Hold or Witness Points.

The Contractor's ITP must include, at least, all the details contained within Section CP1 of Council's Development Manual.

#### **2.1.3 Quality Audits**

*(Add the following)*

Witness Points and Hold Points are specified within this document and referred documents for works described within this document and referred documents.

It is the Constructors / Contractors responsibility to advise the Superintendent and / or Council of the anticipated or planned occurrence of any construction process / aspect or Inspection activity / aspect for which there is an associated Witness Point or Hold Point.

### **2.2 Personnel Qualifications**

*(Add the following)*

All concrete and excavation work, including tunneling, must be performed and supervised by appropriately-qualified and / or appropriately-accredited personnel.

In particular Leading Hands, Supervisors and CCTV Operators must hold Statements of Attainment for Units of Competence (from either the Water Industry National Training Package NWP07, the Civil Construction Training Package RII09 or a training organisation's training course / package acceptable to Council) pertaining to the particular tasks or work that they are engaged in.

Prior to the commencement of any work, Leading Hand, Supervisor and CCTV Operator qualifications must be submitted to the Superintendent. The Superintendent shall then submit all qualification / accreditation documentation to Council for Council review.

Whitsunday Regional Council  
Construction Specification: Sewage Pumping Station

---

Submission of all qualification / accreditation documentation to the Council and/or the Superintendent constitutes a **HOLD POINT**. The Superintendents review and acceptance of the nominated personnel to perform their nominated duties constitutes release of the Hold Point. Works must not commence until the Hold Point is released.

### **3 GENERAL CONSTRUCTION**

#### **3.1 General**

*(Add the following)*

The Contractor must provide all necessary plant, equipment, labour, and materials required to satisfy the intent and / or requirements of this specification.

The Contractor must comply with the requirements of all relevant Authorities including, but not limited to, having regard for stormwater management, dewatering effects / impacts, silt control, noise abatement, proximity to existing buildings and the amenity of adjacent property owners.

All works are to be constructed to the tolerances set out under the relevant sections of Council's Development Manual.

#### **3.2 Customer Focus**

##### **3.2.1 Resolution of Complaints**

*(Add the following)*

All customer enquiries and complaints must be documented including time, date, contact details for the complainant and summary of the complaint and forwarded immediately to the Superintendent for forwarding onto Council for discussion.

It shall be the Superintendent's responsibility to ensure complaints are appropriately actioned with any change to the works scope, methodology etc approved by Council in advance.

#### **3.3 Protection of People, Property and Environment**

##### **3.3.1 Safety of People**

*(Add the following)*

The Contractor must comply with relevant Statutory and OH&S requirements when cutting and disposing of asbestos-cement pipes and materials.

##### **3.3.2 Protection of Other Services**

*(Add the following)*

Prior to works commencing, the Contractor must locate all existing utilities and services and protect them from damage and interference.

Where it is necessary to relocate or alter any existing utility or service, the Contractor must make all necessary arrangements with, and comply with, the requirements of the relevant authorities.

Further to notification requirements, the Contractor must immediately repair damage to any existing utility or service to the satisfaction of the utility or service owner, the Council and the Superintendent.

The Contractor is responsible for all costs associated with rectification of the utility or service regardless of the accuracy of any prior location information provided by the Superintendent, Council, the utility service owner or its agent.

All costs associated with the location, protection, and repair of all services must be borne by the Contractor.

### **3.3.3 Disused / Redundant Sewers and Pressure Mains**

*(Add the following)*

Existing maintenance structures that are no longer required must be removed. Where the Project Drawings or Specification do not identify actions to be taken for disused or redundant sewers and pressure mains, the Superintendent is to be notified immediately. The Superintendent will then seek an instruction from Council as to their preferred treatment (e.g. removed, grout filled etc)

### **3.3.4 Private and Public Properties**

*(Add the following)*

Excavated materials must not be stockpiled against any fence or the walls of any building.

### **3.4 Affected Party Notifications**

*(Add the following)*

For all notifications the period of notice must be 5 (five) working days.

## **4 PRODUCTS, MATERIALS AND EQUIPMENT**

### **4.1 Authorised Products and Materials**

*(Add the following)*

#### **4.1.1 Pressure Pipe-work and Pipe Fittings**

*(This clause 20.1.1 is a new clause)*

Requirements for pressure pipe-work and pipe fittings are as follows:

- Polyvinyl Chloride (PVC) Pipe and Fittings, PVC pressure pipe must be:
  - PVC-M or PVC-O;
  - Series 2 (compatible with ductile iron (DI) pipe);
  - Rubber ring (elastomeric seal) jointed;
  - Class PN16 (minimum);
  - Cream in colour for sewerage applications (neither lighter RAL 080 90 20, nor darker than RAL 075 80 20) or Lilac in colour for recycled water application in accordance with AS1477 and WSAA PS211; and
  - Compliant with AS1260 Parts 1 – 5 (pipes and fittings).

Pipes and fittings must be handled, transported and stored as per the manufacturer's guidelines and AS/NZS 2566.

Further to the requirements of AS2032 "Installation of PVC pipe systems" all PVC pipes installed to operate in direct sunlight must be painted (primer coat and double top coat) with a light coloured water-based acrylic paint.

- Ductile Iron (DI) Pipe and Fittings shall be:
  - rubber ring (elastomeric seal) jointed or flanged;
  - PE sleeved (Colour – Cream);
  - Cement mortar (type SR cement) lined or epoxy lined; and
  - Class PN35; and
  - Compliant with AS 2280 and shall be class K9, rubber ring joined, for spigot and socketed pipes, and class K12 for pipes with one or both ends flanged.
  
- Flanges shall be:
  - to Figures B5 & B6 of AS 4087, as appropriate; and
  - Provided with Grade 316 SS bolts and Grade 304 SS nuts and washers applied with thread anti-seize or oil based lubricant.

Pipe and fittings are to be handled, transported and stored as per manufacturer's guidelines.

All DI pipes below ground shall be provided with polyethylene sleeving for the full length in accordance with AS 3690.

Pipes and fittings cast into concrete must be treated, cleaned and prepared (including power- tool cleaned) in accordance with AS 1627.2 'Metal finishing – Preparation and pretreatment of surfaces Part 2: Power tool cleaning'.

PVC pipework shall not be socketed directly into DI fittings.

- Polyethylene (PE) Pipe and Fittings:
  - electro-fusion, butt-fusion or compression joined;
  - a minimum of class PN16;
  - of either PE80B or PE100 polymer material; and
  - Colour coded to suit the application in accordance with WSA 01.

Fittings shall be:

- (for fittings  $\leq$  DN110mm) - PE in accordance with AS4129; and
- (for fittings  $>$  DN110mm) - DI in accordance with AS2280; and coated internally & externally with PE in accordance with AS4129.

Pipe must be of the required internal diameter shown in the design drawings.

Pipes and fittings are to be handled, transported and stored as per manufacturer's guidelines.

- Steel Pipe and Fittings must only be used with Council approval on a project specific basis. If approved, Steel pipe and fittings shall be:
  - ring jointed, flanged or welded;
  - Fusion bonded polyethylene (FBPE, e.g. Sintakote) or epoxy coated;
  - rubber SR type cement or epoxy lined; and
  - Minimum wall thickness the greater of 6mm or diameter/120.

Flanges shall be:

- To Figures B7, B8 & B9 of AS 4087, as appropriate; and
- Provided with Grade 316 SS bolts and Grade 304 SS nuts and washers.

Steel pipe must be provided with cathodic protection where specified.

Pipe and fittings are to be handled, transported and stored as per manufacturer's guidelines.

- **ABS Pipe and Fittings**

ABS pipe and fittings shall be:

- Solvent welded; and
- Minimum class PN16 pressure.

Joining of pipe shall be in accordance with the manufacturer's instructions.

Pipes and fittings are to be handled, transported and stored as per manufacturer's guidelines.

- **Copper Pipe and Fittings**

Copper pipe and fittings shall be:

- manufactured in accordance with AS 1432;
- in the range of DN6 to DN200 for Type A or Type B;
- insulated from ferrous mains; and
- in compliance with AS3500 'Plumbing and drainage Part 2: Sanitary plumbing and drainage'.

Fittings shall:

- comply with AS 3688 'Water supply – Metallic fittings and end connectors';
- be de-zincification resistant; and
- if capillary fittings, have silver brazed joints or solder insert capillary joints.

#### **4.1.2 Valves**

*(This clause 20.1.2 is a new clause)*

Requirements for valves are as follows:

- **General Valve Requirements**

All valves are to be anti-clockwise close type.

Flange connections for valves must comply with AS4087 'Metallic flanges for waterworks purposes' (or AS2129 'Flanges for pipes, valves and fittings' where appropriate) and have a minimum pressure rating PN16. Bolts must be Grade SS316. Nuts and washers must be Grade SS304.

All sewer valves are to be fitted with a red top / handle.

All ferrous alloy (cast iron, spheroidal graphite cast iron, plain carbon and alloy steel) valves must have protective epoxy coatings.

Oil valves and repack valve glands if directed by the Superintendent.

- Knife Gate Valves shall be:
  - Flanged unless noted otherwise on the Drawings.
  
- Unless specified in the project drawings or directed by the Superintendent otherwise, Air Valves shall be:
  - a minimum size of DN80mm;
  - provided with an isolating sluice valve; and
  - Tyco/Pentair (Council nominated make).
- Sluice Valves shall be:
  - Provided to each pump connection pipe work in the valve pit;
  - Flanged unless shown otherwise on the Drawings; and
  - Resilient seated.
  -
- Non-return Valves shall be:
  - provided to each discharge pipe in the valve pit; and
  - Resilient seated -Tyco/Pentair swing-flex check valves (Council nominated make).
  
- Ball Valves shall be:
  - Flanged unless noted otherwise on the Drawings.
  
- Butterfly Valves shall be:
  - only used with prior approval of Council; and
  - If approved, flanged, unless noted otherwise on the Drawings.
  
- Scour Valves shall be:
  - Sluice valves; and
  - Have assemblies as noted on the Drawings.

#### **4.1.3 Electrically operated actuators**

*(This clause 20.1.3 is a new clause)*

Requirements for electrically operated actuators are as follows:

- General
  - Electrically operated actuators shall:
    - be selected to be interchangeable with existing actuators where works augment existing sewerage infrastructure; and
    - be selected subject to Council approval.
  
- Electrical properties
  - Electrically operated actuators shall:
    - be 3 phase with a rated voltage of 415V 50Hz;
    - be suitable for operation over a phase voltage range of 400V to 440 V; and
    - have phase rotation protection integral with 3 phase actuators.
  
- Installation
  - Electrically operated actuators shall:

- be suitable for indoor and outdoor installation;
  - be within IP56 (minimum, to AS 60529) enclosures, including all auxiliary enclosures;
  - have all electrical connections, controls, and the like, accessible from platforms or walkways;
  - be fitted with limit switches and torque switches appropriately adjusted;
  - be fitted with 240 V ac anti-condensation heaters;
  - be fitted with a Grade 316 SS nameplate, in accordance with AS 1359; and
  - be fitted with a local mechanical position indicator.
- Penstocks and Valves
    - Electrically operated actuators for penstocks and valves shall:
      - be specifically designed for penstock or valve actuator service;
      - have Class F winding insulation;
      - have a rated speed and rotation direction (in conjunction with the gear reduction unit used) to suit the operational requirements of the penstock or valve;
      - deliver a penstock operation time (fully closed to fully open and vice versa) within the range of 2 to 3 minutes;
      - deliver a valve operation time (fully closed to fully open and vice versa) within the range of 4 to 6 minutes;
      - be mounted directly on the valve or penstock capstan so that all forces are confined to the valve or penstock;
      - be supplied with design verified maximum opening and closing torque calculations (supplier prepared) for presentation to Council; and
      - be sized for non-overload operation under the design verified maximum opening and closing torque loadings.

It shall be the Contractor's responsibility to determine the rated output (kW) of the motor, in conjunction with the gear reduction unit used, to suit the operational requirements of the respective penstock or valve.

- Manual override hand wheels
  - Electrically operated actuators shall be fitted with a manual override hand wheel:
    - located not more than 1000 mm, or less than 700 mm, above the operating floor level;
    - between 500mm and 600 mm in diameter (and minimum clearance 150 mm for penstocks);
    - of a diameter which shall require a force of no more than 130 Newtons at the rim to operate the penstock or valve from fully open to fully closed under all operating conditions. Where this cannot be achieved due to the limit on the hand wheel diameter;
    - or a gear reduction unit where a force of no more than 130 Newtons at the rim to operate the penstock or valve from fully open to fully closed under all operating conditions cannot be achieved;
    - that rotates clockwise to close the valve;
    - clearly marked with the words "OPEN" and "CLOSE" and arrows in the appropriate directions; and
    - having rims machined to a smooth finish.
- Control

Electrically operated actuators shall be fitted with integral open and close contactors (Contactors for modulating duty actuators shall be solid state type):

- be fitted with local open / close / emergency stop control pushbuttons;
  - be fitted with Local / Remote control selector switch;
  - be fitted with all ancillary equipment such as control transformers, relays and other components as required;
  - be supplied with an integral reversing DOL starter and associated control equipment;
  - shall be able to be controlled either locally manually or remotely (for valves and penstocks);
  - be fitted with the integral OPEN / CLOSE push buttons, a padlock able LOCAL / REMOTE rotary selector switch, and an emergency stop push button;
  - stop the valve or penstock, regardless of selector switch position, following activation of the emergency stop push button;
  - be fitted with open, close and stop interposing relays which shall enable the actuators to be opened and closed by the control system when remote is selected;
  - be provided with voltage free contacts for remote connection of monitoring signals including, Open and close status, Actuator available (i.e. voltage present and remote selected) and Actuator fault – e.g. over torque, motor overload/over temperature fault;
  - be suitable for remote operation from the PLC;
  - be fitted with a position signal transmitter with an isolated 4 to 20 mA output suitable for connection to the PLC (where specified); and
  - be fitted with temperature sensing devices which shall be embedded in the motor phase windings and shall be arranged to prevent motor overload.
- Non-modulating actuators shall be rated for 60 starts (reversals) per hour.

#### **4.1.4 Preferred Equipment**

*(This clause 20.1.4 is a new clause)*

Unless noted otherwise on the Drawings, the Contractor shall select components from the preferred equipment list included under Council's *Construction Specification: Sewage Pumping Station Electrical Switchboards*.

#### **4.2 Rejected Products and Materials**

*(Add the following)*

Pipes, fittings or materials, including coatings and linings, that are damaged or defective beyond the manufacturer's described damage / defect limits, or those limits defined in the relevant Australian Standard, must not be used.

Damage or defect includes, but is not limited to, delamination, scratching, distortion, chipping, thinning, deflection and cracking.

### 4.3 Pumps

*(Add the following)*

In addition to the requirements of WSA 101 'Industry standard for submersible pumps for sewage pumping stations', pumps shall:

- be submersible type and either Grundfos or Flygt (other makes of pump may be considered by Council);
- be capable of operating at the required duty point for the application;
- be capable of operating near optimal efficiency within the range of operating conditions;
- be capable of continuous operation;
- possess non-overloading characteristics beyond the duty point close to zero head;
- possess starting characteristics acceptable to the electricity supply company and the Council;
- possess a minimum of four (4) poles unless approved otherwise by Council;
- be either soft starter or VSD (Variable Speed Drive) as required by the process and shall not be DOL starting unless approved to be by Ergon Energy;
- experience a maximum of 12 (twelve) starts per hour; and
- include an option for the Operator to select whether the duty / standby changeover occurs on a 'per operation' or per 24-hour basis.

Where electronic starters are used the disturbance to the electrical supply system shall not exceed limits set down in TR IEC 61000.3.6 '*Electromagnetic compatibility (EMC)-Limits - Assessment of emission limits for the connection of distorting installations to MV, HV and EHV power systems*' and TR IEC 61000.3.7 '*Electromagnetic compatibility (EMC) - Limits - Assessment of emission limits for the connection of fluctuating installations to MV, HV and EHV power systems*'.

Radio interference external to the electronic starters shall not exceed limits set down in AS CISPR 11 '*Industrial, scientific and medical equipment - Radio-frequency disturbance characteristics - Limits and methods of measurement*'. A suitable R.F.I. filter shall be provided to ensure compliance with AS CISPR 11.

The level of total harmonic distortions at the point of common coupling (PCC) must be limited to planning levels as set by the Electricity Supply Authority. Appropriate harmonic filters shall be provided on each VSD unit to comply with the Electricity Supply Authority requirements.

### 4.4 Transportation, Handling and Storage of Products and Materials

*(Add the following)*

Notwithstanding manufacturer's guidance advice, PVC, non-black PE and GRP pipes and fittings must be fully protected from sunlight at all times during handling and storage using a breathable shrouding material such as hessian. Black plastic must not be used to protect or shade pipes and fittings under any circumstances.

#### 4.5 Fasteners

*(Add the following)*

Option 2 applies.

Nuts and bolts shall comply with AS 1111.1 'ISO metric hexagon bolts and screws - Product Grade C - Bolts' and AS 1112.3 'ISO metric hexagon nuts - Product Grade C', 150 metric series.

Washers shall be fitted beneath all bolt heads and all nuts.

Washers shall comply with AS 1237.1 'Plain washers for metric bolts, screws and nuts for general purposes - General plan' and AS 1237.2 'Plain washers for metric bolts, screws and nuts for general purposes - Tolerances'.

Stainless steel for nuts, bolts and washers shall conform to AS 4673 'Cold formed stainless steel structures', ISO 3506-1 'Mechanical properties of corrosion-resistant stainless steel fasteners - Part 1 Bolts, screws & studs' and ISO 3506-2 'Mechanical properties of corrosion-resistant stainless steel fasteners - Part 2 Nuts' and be minimum grade 316 SS for bolts and minimum grade 304 SS for nuts and washers.

#### 4.6 Works Inspection and Testing

##### 4.6.1 Switchboards

*(Amend CI 20.9.1 (o) to the following)*

Check that the duty and standby pumps alternate their duty upon each operation and upon a 24-hour cycle.

*(Add the following)*

Electrical switchboards and control panels must be tested in Australia. Switchboards must be type tested by a NATA accredited testing facility in accordance with AS3439.1. Type test certificates must be provided to Council.

The performance of works testing of switchboards in the presence of the Superintendent and Council constitutes a **WITNESS POINT**. The Superintendent shall advise at the time of notification by the Contractor whether the option for the Superintendent to inspect the works testing is required. Council shall advise at the time of notification by the Superintendent whether the option for Council to inspect the works testing is required.

##### 4.6.2 Pumps

*(Add the following)*

The performance of works testing of pumps in the presence of the Superintendent and Council constitutes a **WITNESS POINT**. The Superintendent shall advise at the time of notification by the Contractor whether the option for the Superintendent to inspect the works testing is required. Council shall advise at the time of notification by the Superintendent whether the option for Council to inspect the works testing is required.

#### **4.6.3 Motors**

*(Add the following)*

The performance of works testing of motors in the presence of the Superintendent and Council constitutes a **WITNESS POINT**. The Superintendent shall advise at the time of notification by the Contractor whether the option for the Superintendent to inspect the works testing is required. Council shall advise at the time of notification by the Superintendent whether the option for Council to inspect the works testing is required.

#### **4.6.4 Definitions**

*(This clause 20.9.4 is a new clause)*

'Works Inspection' means an inspection at the manufacturer's factory or facility during the manufacture of equipment to be supplied. The Contractor is to carry out works inspections to ensure that manufacturing is in accordance with specification requirements.

'Works Testing' means testing at the manufacturer's factory or facility by the Contractor, their suppliers or their subcontractors, prior to completion of the works.

The Contractors Inspection and Test Plan (ITP) must note all works inspections and works tests. The Contract Programme must provide for all inspections and tests required.

#### **4.6.5 Works Testing – In General**

*(This clause 20.9.5 is a new clause)*

Works testing of pumps, motors, flow measuring equipment, SCA's, mechanical equipment, electrical switchboards and control panels is required.

Certified test reports and test certificates must be submitted to the Superintendent. The Superintendent shall submit all reports and certificates to Council.

Measuring instruments, including flow meters, shall be tested and calibrated by a NATA accredited testing facility. Test certificates shall be provided to the Superintendent.

#### **4.6.6 Switchgear and Controlgear Assembly (SCA)**

*(This clause 20.9.6 is a new clause)*

#### **4.6.7 Works Inspections**

The performance of works inspections of each SCA in the presence of the Superintendent constitutes a **WITNESS POINT**. The Superintendent shall advise at the time of notification by the Contractor whether the option for the Superintendent to inspect the works is to be exercised. If exercised, the Superintendent's presence during inspections, and satisfactory inspection results, is required prior to the release of the Witness Point.

The performance of works inspections of each SCA in the presence of Council constitutes a **HOLD POINT**. Council's inspection of the works, and satisfactory inspection results, is required prior to the release of the Hold Point.

Works inspections shall consist of:

1. First Inspection – Metalwork finished;
2. Second Inspection – Metalwork finished and painted;
3. Third Inspection – All electrical equipment installed; and
4. Final Inspection.

The Contractor shall notify the Superintendent at least seven (7) working days before each inspection is required. The Superintendent shall notify Council at least five (5) working days before each inspection is required.

Inspections, other than the final inspection, are intended to maintain construction standards and are not intended, unless otherwise arranged, as functional tests. SCA manufacture shall not cease during these inspections.

The Contractor shall provide inspection reports to the Superintendent.

Any work carried out by the Contractor beyond, or in excess of, the work necessary for the final inspection is at the Contractor's risk. If a Council inspection is requested before work has reached a stage where the inspection is warranted, the cost to Council of the premature inspection may be recovered from the Developer or deducted from the Contract sum.

#### **4.6.8 Works Testing**

The performance of works testing on each SCA in the presence of the Superintendent constitutes a **WITNESS POINT**. The Superintendent shall advise at the time of notification by the Contractor whether the option for the Superintendent to attend works testing is to be exercised. If exercised, the Superintendent's presence during works testing, and satisfactory works testing results, is required prior to the release of the Witness Point.

The performance of works testing on each SCA in the presence of Council constitutes a **HOLD POINT**. Council's presence during works testing, and satisfactory works testing results, is required prior to the release of the hold point.

Works testing on each SCA shall include, but not be limited to:

- Visual inspection, equipment mounting and wiring termination checks;
- Insulation tests before and after power (high pot) tests, including each phase to earth, each phase to neutral, between phases using a minimum of 1000 V megger;
- Power tests (high pot) with AC voltage of 2.5 kV;
- Operational test of all protective devices; and
  - Simulated functional tests for all drives and electrical equipment in manual mode and in automatic mode where applicable

Testing must comply with the requirements of AS3439.1 and be performed during the final inspection in the presence of a Council representative.

#### **4.6.9 Test Certificates**

Following completion of all tests the Contractor shall submit to the Council a full set of test certificates for each SCA.

#### **4.6.10 Mechanical Equipment**

*(This clause 20.10.1 is a new clause)*

#### **4.6.11 Works Inspections**

The performance of works inspections of mechanical equipment in the presence of the Superintendent constitutes a **WITNESS POINT**. The Superintendent shall advise at the time of notification by the Contractor whether the option for the Superintendent to inspect the works is to be exercised. If exercised, the Superintendent's presence during inspections, and satisfactory inspection results, is required prior to the release of the Witness Point.

Works inspections shall consist of:

1. First Inspection – Metalwork finished;
2. Second Inspection – Metalwork finished and painted;
3. Third Inspection – Fully assembled equipment; and
4. Final Inspection.

Inspections, other than the final inspection, are intended to maintain construction standards. The Contractor shall provide inspection reports to the Superintendent.

#### **4.6.12 Works Testing**

The performance of works testing on mechanical equipment in the presence of the Superintendent and Council constitutes a **WITNESS POINT**. The Superintendent shall advise at the time of notification by the Contractor whether the option for the Superintendent to inspect the works testing is to be exercised. Council shall advise at the time of notification by the Superintendent whether the option for Council to inspect the works testing is to be exercised. If exercised, the Superintendent's and Council's presence during works testing, and satisfactory works testing results, is required prior to the release of the Witness Point.

Testing at the factory for materials and of major items of equipment supplied by the Contractor under this contract must be carried out on the following as a minimum:

- Pumps with motor sizes greater than 11 kW must be works tested at the supplier's factory in accordance with AS2417 (Rotodynamic Pumps – Hydraulic performance acceptance tests – Grades 1 and 2); and
- as nominated in the Tender Document for all other mechanical equipment.

#### **4.6.13 Test Certificates**

Following completion of all tests the Contractor must submit to the Superintendent a full set of test certificates for each item of mechanical equipment.

#### **4.6.14 Valves**

*(This clause 20.10.2 is a new clause)*

#### **4.6.15 General**

The performance of works testing of valves in the presence of the Superintendent and Council constitutes a **WITNESS POINT**. The Superintendent shall advise at the time of notification by the Contractor whether the option for the Superintendent to inspect

the works testing is to be exercised. Council shall advise at the time of notification by the Superintendent whether the option for Council to inspect the works testing is to be exercised. If exercised, the Superintendent's and Council's presence during works testing, and satisfactory works testing results, is required prior to the release of the Witness Point.

#### **4.6.16 Works Testing of Knife Gate Valves**

Knife Gate valves shall be works tested in accordance with the manufacture's specification and the enclosed Pre-commissioning check sheets (Refer Appendix A).

#### **4.6.17 Works Testing of Air Valves**

Air valves shall be works tested in accordance with the manufacture's specification and the enclosed Pre-commissioning check sheets (Refer Appendix A).

#### **4.6.18 Works Testing of Gate Valves and Non-Return Valves**

The following works testing shall be performed:

- Test 1 — Body Test
 

The valve shall be blanked off at both ends and a body test pressure of 1.5 times the valve rated pressure shall be applied for 5 minutes with the plug in the partially open position. No leakage shall be visible;
- Test 2A — Plug or Gate Test
 

The valve shall be blanked off at the upstream flange only, and a test pressure of 1.5 times the valve rated pressure shall be applied for 5 minutes with the valve in the closed position. There shall be no visual evidence of structural damage to the plug or of leakage through the plug itself;
- Test 2B
 

While the valve is set up in the Test 2a position a test pressure equal to the working pressure specified shall be applied and the valve shall be partially opened to prove that the rim force required on the hand wheel does not exceed 180N; and
- Test 3 — Seat Test
 

The valve shall be blanked off at the downstream flange and a test pressure equal to the valve rated pressure shall be applied for 5 minutes with the valve in the closed position. No leakage past the valve seat shall be observed when the test is made. All tests shall simulate a valve in a terminal position held rigidly at one end only. In this condition, the valve shall be blanked off in such a manner that the axial hydraulic force is not externally restrained. This simulates a valve in a fully differential pressure situation held rigidly at one end only.

#### **4.7 Concrete Works**

*(Add the following)*

Classes of concrete used for the construction of the works must be as detailed in Table 4.7.1.

| Application                                                                                   | Grade           | Minimum Cement Content (kg/m <sup>3</sup> ) | Maximum W/C ratio | Maximum Flyash Content (%) |
|-----------------------------------------------------------------------------------------------|-----------------|---------------------------------------------|-------------------|----------------------------|
| Blinding concrete, mass concrete                                                              | N15             | -                                           | -                 | -                          |
| Surface footpaths & driveways                                                                 | N25             | -                                           | -                 | -                          |
| Unreinforced thrust blocks, anchor blocks, bulkheads & concrete encasement - all environments | N25             | -                                           | -                 | -                          |
| Reinforced thrust blocks, anchor blocks, bulkheads & concrete encasement - all environments   | N32             | -                                           | -                 | -                          |
| Maintenance holes & benching – all environments                                               | S40 (SR Cement) | 380                                         | 0.50              | 20                         |
| Valve chambers & flow-meter pits – non-aggressive* environments                               | N32             | -                                           | -                 | -                          |
| Valve chambers & flow-meter pits - aggressive* soil and groundwater environments              | S40 (SR Cement) | 380                                         | 0.50              | -                          |
| Underground pumping station wells - all environments.                                         | S40 (SR Cement) | 380                                         | 0.45              | -                          |

**Table 4.7.1 – Concrete Properties**

Cover to reinforcement for water retaining structures must comply with the requirements of AS3735 'Concrete structures retaining fluids'.

Cover to reinforcement for structures other than water retaining structures must comply with the requirements of the relevant Exposure Classifications within AS3600 'Concrete structures' but must not be less than that required for C1 in aggressive environments and B1 elsewhere.

Concrete surfaces exposed to aggressive environments must be provided with a protective coating. The protective coating applied must be in addition to the concrete cover requirements.

All concrete work shall be supervised by a person (the Supervisor) experienced in all aspects of concrete construction. Refer to Section 18.2 for details of requirements.

The Superintendent will inspect all formwork, reinforcement and pour location for each concrete construction (including thrust blocks, property connection branches, MH

bases, concrete structures etc.) prior to placement of any concrete. The Contractor shall be in attendance when the Superintendent inspects the work prior to concrete placement.

All formwork, reinforcement, reinforcement supports, block-outs, excavations and preparations, and the like, must be in place, and the Superintendent notified, at least one full working day before concrete is scheduled to be placed in any section of the work.

Inspection of the works by the Superintendent prior to concrete placement constitutes a **HOLD POINT**. Release of the Hold Point by signoff by the Superintendent following inspection is required prior to concrete placement at each concrete construction.

Inspection of the works by Council prior to concrete placement constitutes a **WITNESS POINT**. Council shall advise at the time of notification by the Superintendent whether the option to inspect is to be exercised. If exercised, release of the Witness Point, by signoff by the Council, is required prior to concrete placement at each concrete construction.

## 5 ELECTRICAL WORKS

### 5.1 Scope of Work

*(Add the following)*

- Where provision of standby diesel generator connection facilities is only required (supply of generator by others), supply and install an external weather-proof and vandal-proof socket inlet, or a junction box, as described above;
- Negotiations with the Electricity Supply Authority. The Contractor must complete and submit all relevant application forms, attain all relevant approvals and pay all relevant fees;
- Supply and installation of electrical switchboard;
- Supply and installation of all instrumentation and field mounted control equipment;
- Supply, installation and termination of all cabling;
- Supply and installation of all junction boxes, conduits, cable trays, cable ladders and fittings;
- Liaison with Council;
- Any other work as required in the project specification; and
- Supply and installation of Lighting and Surge Protection as specified in the Technical Specification. (The Designer shall have assessed the need for lightning protection for the site in compliance with the requirements of AS1768 "Lightning Protection").

Surge protection earth cable shall be of a size as recommended by the manufacturer and as a minimum must comprise stranded 16 (sixteen) mm<sup>2</sup> cable. Surge protection earth cable shall be green / yellow PVC insulated cable installed such that it is segregated from all other cables in as direct a path as possible, no sharp bends are permitted to be installed in the surge protection cabling.

Surge protection devices must be provided as follows:

- Inside each Main SCA or Switchboard / Panel / Distribution Board across incoming electricity supply;
- Across electricity supply to all instrumentation loops mounted outside in the field;
- On all signal lines run to and from outside. Instrument surge diverters must be provided on both ends of each loop; and
- On all data and cable communication lines.

### 5.2 Consumer Mains

#### 5.3.1 Mains Requirements

*(Add the following)*

A minimum site power factor of 0.9 must be provided. The prospective fault level of each electrical installation shall be as nominated by Electricity Supply Authority but in any case the minimum fault level shall be as follows:

- Not less than 15kA for one (1) second for the Main Switchboards rated 100 amp or less; and
- Not be less than 25kA for one (1) second for the Main Switchboards rated over

100 amp.

If Variable Speed Drives (VSD) drives are used the level of total harmonics distortion (THD) at the point of common coupling (PCC) must be as required by the Electricity Supply Authority.

Consumer mains with a cross section greater than 120 mm<sup>2</sup> shall consist of single core XLPE/PVC cables laid in trefoil configuration.

The current carrying capacity of consumer mains shall be at least 1.3 x maximum demand.

Consumer mains shall be sized to ensure the voltage drop at the incoming terminals of the switchboard does not exceed 2.5% under 1.3 x maximum demand conditions.

Electricity supply metering must be provided as required by the Electricity Supply Authority.

### **5.3 Earthing**

#### **5.3.1 General**

*(Add the following)*

The primary electricity supply must be a 3-phase 415 V 50 Hz MEN system with sufficient capacity to accommodate the pumping station full load and meet the electricity supply company's starting requirements (as per WSA 04 Section 7.2.3 'Primary supply').

Earthing rods must be copper clad stainless steel, 16mm (minimum) in diameter and 3m (minimum) in length. Each earthing cable must be provided with a PVC sleeve. Bare earthing conductors must not be used. All earthing cable connections to earthing rods must be by means of approved earthing clamps.

An earth inspection pit shall be provided at each rod. Each pit must be marked for easy identification.

### **5.4 Switchboard Installation**

#### **5.4.1 General**

*(Add the following)*

Where a permanent standby diesel generator is required to be provided on site, the main switchboard shall be fitted with an Automatic Transfer Switch (ATS) to facilitate an automatic transfer between the electricity grid and the generator supply. Where provision of standby diesel generator connection facilities is only required the changeover switch shall be manual switch. For details of ATS refer to Council's Preferred Equipment List and Standard Specification Sewage Pumping Station Electrical Switchboards.

## 5.5 Installation of Level Sensors

### 5.5.1 *Wet-well level sensor probes*

*(Add the following)*

Install one (1) continuous level measuring device in each wet well. The output of each level measuring device shall be a 4-20 mA signal and shall be an input to the pump station controller.

Install two (2) float switches for the HH level alarm and HHH level alarm in each pump station.

For continuous level measuring device details and float switch details refer to Council Construction Specification: Sewage Pumping Station Electrical Switchboards.

## 6 MECHANICAL INSTALLATION OF PUMPS, VALVES AND FITTINGS

### 6.1 General

*(Add the following)*

Valves shall be installed such that:

- Operation of valves may be performed manually without the need for tools. Valves shall be capable of opening against full unbalanced head, and closing against full flow, smoothly and without vibration or cavitation. The maximum effort required at the hand wheel under load shall not exceed 135 N;
- Valves and their actuators are easily accessible for maintenance purposes and are capable of being removed from their location in a pipeline without obstruction by the pipeline or other equipment; and
- Hand wheels shall be clearly marked with the words OPEN and SHUT and adjacent arrows to indicate the direction of rotation to which each operation refers.

Valves must be compatible with pipe work to ensure that proper sealing is achieved between pipe flanges and valve flanges. Concrete lining in pipe work must not be chipped away or reduced to provide clearance from the working parts of valves.

Valves must be located to avoid conflict with property accesses, telecommunications service pits, electrical service pits and any other street side furniture.

### 6.2 Flanged Joints

*(Add the following)*

Bolts on all flanges will protrude no more than 10mm past the nut when tightened.

Apply sufficient anti-seize / anti-galling material to the threads of all stainless steel fasteners. The material shall be Polytetrafluoroethylene (PTFE) (either tape to AS 1272, dipped or sprayed) or molybdenum disulphide.

Flanges must comply with AS4087 'Metallic flanges for waterworks purposes' (or AS2129 'Flanges for pipes, valves and fittings' where appropriate).

### 6.3 Gauges and Recorders

#### 6.3.1 Pressure Gauges

*(Add the following)*

The dry well pipework pressure gauge must comply with AS 1349 and have minimum gauge face diameter of 50mm.

Steel and ductile iron pipes of DN150 and larger shall have gauges and fittings screwed into the pipe wall. In steel and ductile iron pipe work less than DN150mm, gauges and fittings shall be screwed into a tapping band. Tapping bands shall be used on pipes other than steel or ductile iron.

The pressure gauge range for single or parallel pumps duty shall be 0 to 1.7 times the closed valve head of the pumps.

#### 6.3.2 Electromagnetic Flowmeters and Flow Switches

*(This clause 24.4.3 is a new clause)*

Provide an electromagnetic flow meter housed within the pumping station or in a separate dedicated concrete structure. House the flowmeter converter in the pump station electrical switchboard and provide an input into the site telemetry system. For the flowmeter details refer to Council's Preferred Equipment List.

Provide each pump with an IFM Effector flow switch. For details refer to Council's Preferred Equipment List.

### 25 Pump Lifting Chains

*(Add the following)*

| Sewerage Pumping Station Code<br>Section reference | WRC requirement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 25.1 Pump Lifting Chains                           | <ul style="list-style-type: none"> <li>- Lifting chains shall be fitted to each pump and shall be in accordance with AS 2321;</li> <li>- Eyebolts shall be in accordance with AS 2317 – stainless steel;</li> <li>- Shackles in accordance with AS 2741 – stainless steel;</li> <li>- Lifting eyes in accordance with AS 3776 – stainless steel;</li> <li>- Lifting chain to be grade L – stainless steel;</li> <li>- The lifting chain for pumps less than 1 tonne shall be 10mm link as a uniform standard;</li> <li>- Lifting chain for pumps weighing greater than 1 tonne shall be sized accordingly;</li> <li>- Provide a suitable bracket and hook in an out of the way location for hanging the chain; and</li> </ul> |

|               |                                                                                                                                                                                                                                                                       |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | <ul style="list-style-type: none"> <li>- For checking and chain replacement, each pump station shall have an easily visible plaque mounted adjacent to the wet well stating length and weight of chain and the weight of the pump to which it is attached.</li> </ul> |
| 25.2 Brackets | <ul style="list-style-type: none"> <li>- Provide stainless steel brackets for mounting of floats; and</li> <li>- Provide stainless steel brackets for fastening the level sensor stilling well.</li> </ul>                                                            |

**7 ACCESS ROAD AND HARDSTAND AREAS**

**7.1 General**

*(Add the following)*

As a minimum, all Access Roads shall be sealed with a two (2) coat bitumen seal in accordance with Section 26.4 of the Code, or Council’s Standard Rural Access Driveway drawing R-0035 as appropriate. The Designer shall give consideration to vehicle access to Pump Stations during periods of prolonged wet weather when determining the finished RL and provision drainage for the Access Road.

**8 EXCAVATION**

**8.1 Safety**

*(Add the following)*

Excavation work must be in accordance with the Safe Work Australia publication ‘Excavation Work – Code of Practice’. All instances of the word ‘should’ in the Code must be read as ‘must’.  
Safety barriers must be installed along the edges of open excavations and fenced pedestrian and vehicular accesses installed across trenches to maintain access to properties at all times. All installations must be adequately illuminated.

**8.2 Limits of Excavation**

*(Add the following)*

A horizontal distance of 600mm (minimum) must be maintained between the top edge of any excavation and the adjacent toe of any excavated material or stockpile.

The minimum clear trench width (extending from the trench floor to a height of 150mm above the top of the pipe) must be as detailed in Table 8.2.

|                        |                          |
|------------------------|--------------------------|
| Nominal Pipe Size (DN) | Minimum Trench Width(mm) |
|------------------------|--------------------------|

|     |      |
|-----|------|
| 100 | 600  |
| 150 | 600  |
| 200 | 600  |
| 225 | 800  |
| 250 | 800  |
| 300 | 900  |
| 375 | 900  |
| 400 | 900  |
| 450 | 1000 |
| 500 | 1200 |
| 525 | 1200 |
| 600 | 1200 |

**Table 8.2 – Minimum Trench Widths**

Where trench shoring is used, the clear trench width is measured between the internal faces of the trench shoring.

### 8.3 Support of Excavations

*(Add the following)*

Personnel engaged in work associated with excavation support must be competent and qualified in compliance with all statutory obligations.

All excavation support must be designed by an RPEQ (Registered Professional Engineer Queensland) qualified engineer.

Temporary excavation support must be left in place where its removal may endanger structures in the vicinity of the excavation.

Steel excavation shoring and lining must comply with AS4744.1 'Steel Shoring and Trench Lining – Design'.

#### **8.4 Foundations and Foundation Stabilization**

*(Add the following)*

Where foundation material shows any signs of movement, groundwater ingress or any other possible instability, and such instability cannot be controlled by conventional means, the foundation material must be assessed by the Designer for adequacy of structural support. If the Designers assessment recommends remedial works the remedial works must be detailed in writing by the Designer.

#### **8.5 Surplus Excavated Material**

*(Add the following)*

Excess spoil must be removed from the site and disposed of off-site at an approved location.

Refer to Clause 19.5.3. If acid sulphate soils are identified treatment and management measures must be implemented in accordance with the Queensland State Planning Policy 2/02 Guideline 'Acid Sulfate Soils'.

### **9 BEDDING FOR PIPES, BENDS, WET-WELLS AND MAINTENANCE STRUCTURES**

#### **9.1 Trench Floor Preparation**

*(Add the following)*

Trench shall also mean the excavation for wet-well and maintenance structure construction.

Inspection of trenches by the Superintendent following completion of excavation constitutes a **HOLD POINT**. Release of the Hold Point, via signoff by the Superintendent, is required prior to commencement of pipe bedding, laying and jointing.

Inspection of trenches by Council following completion of excavation constitutes a **WITNESS POINT**. Council shall advise at the time of notification by the Superintendent whether the option to inspect is to be exercised. If exercised, release of the Witness Point, by signoff by the Council, is required prior to commencement of pipe bedding, laying and jointing.

#### **9.2 Bedding Materials**

Refer to WRC Standard Drawings and others referring to 'bedding material'.

Bedding Material must be sand as defined in WSAA Product Specification WSA PS – 350 'Compaction Sand for Pipe Embedment'. Grade B must apply (as per AS2566.2 'Buried Flexible Pipelines – Part 2: Installation', Appendix G, Table G3).

Other than where shown on Council Standard Drawings, Coarse Bedding Material may only be used if specifically approved by Council.

Coarse Bedding Material must be:

- A 10mm, 7mm or 5mm processed naturally occurring single-size aggregate compliant with WSAA Product Specification WSA PS-351 "Processed Aggregates for Pipe Embedment" and as defined in Table 351.1. (Processed naturally occurring means 'not crushed'), or; and
- A 14mm processed naturally occurring graded aggregate compliant with WSAA Product Specification WSA PS-351 "Processed Aggregates for Pipe Embedment" and as defined in Table 351.1. (Processed naturally occurring means "not crushed).

'Crusher Dust' (a waste product from the crushing process), whether further processed or not, is not permitted for use as Bedding Material or Coarse Bedding Material.

### **9.3 Placement of Bedding**

*(Add the following)*

Refer to Standard Drawing S-0090.

### **9.4 Bedding for Concrete Structures**

*(Add the following)*

Bedding material for concrete structures shall be as per bedding material for maintenance holes.

### **9.5 Bedding for Maintenance Shafts and Variable Bends**

Maintenance shafts, terminal maintenance shafts, inspection openings and variable bends as defined in WSA 04-2005 'Sewage Pumping Station Code of Australia' are not permitted for use by Whitsunday Regional Council.

## **10 PIPE LAYING AND JOINTING**

### **10.1 Installation of Pipes**

#### **10.1.1 General**

*(Add the following)*

Refer to Standard Drawings for minimum cover to the top of a pressure main.

Less depth of cover than that noted or referred to in this clause may be permitted subject to provision of adequate pipe protection and approval by Council.

#### **10.1.2 Cleaning, inspection and joint preparation**

*(Add the following)*

Joints must be made such that the witness mark must, at no point, be more than 1mm from the end of the socket.

Pipes, fittings, valves, and materials must be cleaned and examined jointly by the Contractor and the Superintendent prior to laying. Each pipe length must be suspended in a sling to facilitate a full inspection should the Superintendent instruct.

Inspection of pipes, fittings, valves, and materials by the Superintendent prior to laying constitutes a **WITNESS POINT**. The Superintendent shall advise, at the time of notification by the Contractor, whether the option to inspect is to be exercised. Release of the Witness Point via signoff by the Superintendent is required.

A mechanical pipe cutter must be used for cutting pipes other than PVC and PE in the field. PVC and PE pipes may be cut in the field using a power saw or a fine toothed hand saw and mitre box. Ends of field-cut pipes must be prepared in accordance with the manufacturer's instructions, or as directed by the Superintendent.

Witness marks must be made on field-cut pipes using a felt-tip marking pen at a position from the end of the pipe as specified by the manufacturer. Witness marks must not be scored into the pipe.

Metallic pipes cut surfaces must be treated with protective coatings and linings equivalent to that on the pipe or appurtenance that has been cut.

GRP pipe cut surfaces must be treated with a resin in accordance with the manufacturer's guidelines.

### **10.1.3 Laying**

*(Add the following)*

All laid and jointed pipes, including completed HCB's prior to concreting, must be inspected by the Superintendent prior to the commencement of trench backfilling (placement of embedment material above top of bedding). This action constitutes a **HOLD POINT**. The Superintendent's approval of the laid and jointed pipes is required prior to the release of the Hold Point. Backfill must not be placed until release of the hold point.

Inspection by Council of all laid and jointed pipes, including completed HCB's prior to concreting, prior to commencement of trench backfilling (placement of remaining embedment material above top of bedding) constitutes a **WITNESS POINT**. Council shall advise at the time of notification by the Superintendent whether the option to inspect is to be exercised. If exercised, release of the Witness Point, by signoff by the Council, is required prior to backfilling commencing.

Where PVC pipes are to be joined to ductile iron pipes, the joints must be made by inserting a PVC spigot into a ductile iron socket. Ductile iron spigots must not be joined to PVC sockets. Alternatively, multi-fit mechanical couplings or flanged adaptor couplings may be used to join pipes of different materials.

## **10.2 Horizontal and Vertical Deflection of Gravity and Pressure Mains**

### **10.2.1 General**

*(Add the following)*

Horizontal and vertical deflection of gravity sewers (including horizontal, vertical and compound curves) is not permitted.

### **10.2.2 Methods of Deflection**

*(Add the following)*

Horizontal and vertical deflection of gravity sewers (including horizontal, vertical and compound curves) is not permitted.

### **10.3 Horizontal and Vertical Separation of Crossing Pipelines**

*(Add the following)*

Refer to Table 3.1 of WSA 04-2005-2.1 *Sewage Pumping Station Code of Australia Part 1: Planning & Design* for minimum offsets between pressure mains and underground services.

### **10.4 Flotation Control**

*(Add the following)*

Flotation of pipes during laying, backfilling and testing must be prevented. Pipes that float or move must be removed and the pipeline re-constructed. Pipes that are removed must only be reused in the pipeline reconstruction provided they are undamaged and are inspected and accepted by the Superintendent for re-use.

Temporary supports and restraints must be removed prior to completion of backfilling.

### **10.5 Thrust and Anchor Blocks and Restrained Joints for Pressure Mains**

*(Add the following)*

Council consent is required for the use and type of restrained joints, as an alternative to thrust blocks, in congested service corridors and under urgent commissioning conditions.

Provide temporary anchorages adequate to restrain the pipe when under hydrostatic test. Provide all other temporary anchorages and supports as required during construction.

### **10.6 Marking Tapes**

#### **10.6.1 Detectable Marking Tape**

All rising main construction must include placement of detectable marking tape.

Detectable marking tape must be laid along the line of sewer rising mains and non-metallic mains at a depth of least 300mm, and no more than 500mm, from finished surface level.

### **10.7 Bored Pipes under Roads, Driveways and Elsewhere**

*(Add the following)*

References to 'pipeline' in this Clause 38.8 amendment shall also be read as 'sewer rising main'. Refer to the following Standard Drawings.

Unless directed otherwise, encasing pipe must extend to a minimum of 1.0m behind

back-of-kerb on each side of road carriageways.

Pipelines must be fitted with pipe supports and the pipeline centrally located within the encasing pipe.

DICL pipeline enclosed within the encasing pipe need not be sleeved in accordance with Clause 38.8 (amended).

Where a pipeline crosses a state-government controlled road, a watercourse or any landform, feature or structure under the control or jurisdiction of any Authority or Owner (the 'Authority'), works must comply with the requirements of that Authority. The Contractor must provide written notification to the Authority of the intention to carry out the work and pay any applicable fees. The Contractor must then obtain the written authorisation to perform the work from the Authority prior to works commencing.

A copy of the Authorities written authorisation must be supplied to the Superintendent. Submission of a copy of the written authorisation to the Superintendent constitutes a **HOLD POINT**. Release of the Hold Point, by signoff by the Superintendent, following submission of the written authorisation is required prior to works commencing.

Submission, by the Superintendent, of a copy of the Authorities written authorisation to Council constitutes a **WITNESS POINT**. Council shall advise at the time of notification by the Superintendent whether the option to review the written authorisation is to be exercised. If exercised, release of the Witness Point, by signoff by the Council, is required prior to works commencing.

Installation of pipeline by open trenching installation methods is not permitted over those pipeline lengths designated for installation by trenchless installation methods.

Work Method Statements for trenchless pipeline installations must be submitted to the Superintendent and must address the following matters:

- General description of method and operation sequence;
- Size, invert depth and location of temporary access / work pits required;
- Use of specialist subcontractors; and
- Specialist equipment to be used.

Submission of Work Method Statements to the Superintendent constitutes a **HOLD POINT**. Release of the Hold Point, by signoff by the Superintendent, following the review of Work Method Statements and confirmation of their adequacy by the Superintendent is required prior to works commencing.

## 10.8 Corrosion Protection of Cast Iron

*(Add the following)*

All pipes and fittings must be sleeved with polyethylene film, adhesive tape (PVC), straps and buckles that comply with AS3680 'Polyethylene sleeving for ductile iron piping'.

Sleeving must be installed in compliance with the requirements of AS3681 'Application of polyethylene sleeving for ductile iron piping' and the pipe/fitting manufacturer's instructions. Where requirements conflict AS3681 shall take precedence.

## 10.9 Location Markers

*(Add the following)*

Refer to Standard Drawings 'Hydrant and Valve Installation'.

Where no kerb, or kerb and channel, is located within 6m of sewer rising main (SRM) valves install marker stakes adjacent to SRM valves and at all other locations noted on the design drawings. SRM marker stakes shall be as detailed on Standard Drawing W-0060 and marked with red lettering 'SRM' on a white background. Valve covers must be painted black.

Where kerb, or kerb and channel, is located within 6m of sewer rising main (SRM) valves install kerb markings in accordance with Standard Drawing R-0160 and marked with black lettering 'SRM' on a white background. Valve covers must be painted black.

Marker stakes material may be recycled plastic or in accordance with Standard Drawing W-0060. Marker stakes must be coloured white.

The location of pipes crossing roads shall be indicated by kerb markers. Refer to Standard Drawing R-0160.

## 10.10 Welding of Steel Pressure Mains

### 10.10.1 General

*(Add the following)*

At welded joints apply either polyethylene heat shrink sleeves or a petrolatum tape wrap system in accordance with the manufacturer's installation requirements.

## 11 WET-WELLS AND MAINTENANCE HOLES (MHS)

### 11.1 General

*(Add the following)*

Further to Clause 20.10 (amended) concrete for wet-wells and maintenance holes must:

- Contain only Type SR cement;
- Contain a maximum of 20% fly ash additive; and
- Contain cement no older than three (3) months from manufacture.

### 11.2 Precast Concrete Systems

*(Add the following)*

Precast concrete systems may only be used in lieu of cast in-situ concrete systems with prior approval of Council.

Precast maintenance holes' components must comply with:

- For concrete – AS4198 "Precast concrete access chambers for sewerage applications";

- For PVC – AS1477 “PVC pipes and fittings for pressure applications”;
- For PE – AS2033 “Installation of polyethylene pipe systems”;
- For ABS – AS3518 “Acrylonitrile butadiene styrene (ABS) compound, pipes and fittings for pressure applications”; and
- For GRP – AS3571.1 “Plastics Piping Systems – Glass reinforced thermoplastics (GRP) systems based on unsaturated polyester (UP) resin Part 1: Pressure and non-pressure drainage and sewerage”.

Precast wet-well components must comply with:

- For concrete – AS4198 “Precast concrete access chambers for sewerage applications”;
- For ABS – 3518 “Acrylonitrile butadiene styrene (ABS) compounds, pipes and fittings for pressure applications”; and
- For GRP - AS3571.1 “Plastics piping systems—Glass-reinforced thermoplastics (GRP) systems based on unsaturated polyester (UP) resin Part 1: Pressure and non-pressure drainage and sewerage”.

Precast system components must not be delivered to the site until compliance with the relevant Australian Standard has been demonstrated to the Superintendent. This action constitutes a **HOLD POINT**. Release of the Hold Point, by signoff by the Superintendent following review of the submission and confirmation of its adequacy by the Superintendent, is required prior to delivery.

### **11.3 Internal Coating of Concrete Wet-wells and MHs**

*(Add the following)*

Refer to Council Standard Drawings for the required internal coating of 1800 diameter and 2400 diameter wet wells respectively.

Use of alternate protective coatings will not be permitted with first receiving written confirmation from Council.

### **11.4 Covers**

*(Replace the contents of Clause 31.8 with the following)*

#### **11.4.1 Maintenance Holes**

Maintenance hole covers must be finished flush with the surface in roadways, footpaths and paved surfaces of any type. Elsewhere, covers must be finished to the levels detailed on Standard Drawings S-0020, S-0021, S-0022, S-0024, S-0025 and S-0026.

Bolt-down covers must be installed in areas subjected to 1 in 100 year flooding and elsewhere as shown on the Drawings.

#### **11.4.2 Wet-wells, Valve Pits and Flow Meter Pits**

McBerns sealed safety lids (or similar) are to be provided for all pump wells. Safety screens must be of Grade 316 Stainless Steel. Lids and frames must be of aluminium construction.

#### **11.4.3 Wet-well Ventilation**

*(Add the following)*

Vents (inducts and educts) are to be designed in accordance with WSA CI 5.5 and approved by Whitsunday Regional Council prior to installation. All installation shall be as per the design specification.

#### **11.4.4 Odour Control**

*(Add the following)*

Odour control measures are to be designed in accordance with WSA CI 10.10 and approved by Whitsunday Regional Council prior to installation. All installation shall be as per the design specification. As a minimum all vents are to be fitted with a "Green Dome" to be specified by Whitsunday Regional Council.

The use of forced aeration techniques to control wet-well odour are not to be specified without prior agreement with Whitsunday Regional Council.

#### **11.4.5 Water Service Connection**

*(Add the following)*

The contractor shall provide a 32mm internal diameter water service to each pump station, and the cost of such shall be included in the contract price. Each service shall be fitted with a Reduce Zone Backflow Prevention Device and hose cock.

#### **11.4.6 Wet-well Washers**

*(Add the following)*

Well washers are to be provided for all pump stations. Well washers are to be operated by an automated timer system. Design of well washers is to be in accordance with WSA CI 5.4.7 and Whitsunday Regional Council requirements.

#### **11.4.7 Dewatering and Groundwater**

*(Add the following)*

The contractor is to implement appropriate dewatering measures as required to permit excavation and construction of the pump station and lift stations and associated works.

The contractor shall take all necessary precautions to prevent uplift of structures due to groundwater. Prior to construction of the wet well, the Contractor will supply buoyancy calculations (by an RPEQ) demonstrating that the necessary ballast has been provided.

#### **11.4.8 By-pass Connection**

*(Add the following)*

The Contractor shall provide a rising main bypass connection in the valve pit. The bypass is to be a take-off from the rising main and incorporate a check-valve, sluice-valve and cam-lock fitting. The arrangement is to be approved by Whitsunday Regional Council prior to works commencing.

## **12 PIPE EMBEDMENT AND SUPPORT**

### **12.1 Embedment Materials**

*(Replace the contents of Clause 32.1 with the following)*

Refer to WRC Standard Drawings and others referring to 'Embedment material'.

Embedment Material must be sand as defined in WSAA Product Specification WSA PS – 350 'Compaction Sand for Pipe Embedment'. Grade B must apply (as per AS2566.2 'Buried Flexible Pipelines – Part 2: Installation', Appendix G, Table G3).

Coarse Embedment Material must be:

- Either a 10mm, 7mm or 5mm processed naturally occurring single-size aggregate compliant with WSAA Product Specification WSA PS – 351 'Processed Aggregates for Pipe Embedment' and as defined in Table 351.1. (Processed naturally occurring means 'not crushed'), or; and
- A 14mm processed naturally occurring graded aggregate compliant with WSAA Product Specification WSA PS – 351 'Processed Aggregates for Pipe Embedment' and as defined in Table 351.1. (Processed naturally occurring means 'not crushed').

'Crusher Dust' (the waste product from the crushing process), whether further processed or not, is not permitted for use as Embedment Material or Coarse Embedment Material.

### **12.2 Compaction of Embedment**

#### **12.2.1 General**

*(Add the following)*

Table 36.2 'Minimum Compaction of Embedment and Trench / Embankment / Other Fills' does not apply.

Table 22.1 and Table 22.2 of WSA 02-2002 apply.

Unless concrete encased, backfill to risers must be hand compacted to the top of the socket, or coupling, on the highest branch off the riser and for the full width of trench and for a minimum distance of 500mm upstream and downstream of the riser.

Compaction of embedment material using water flooding is not permitted.

#### **12.2.2 Methods**

*(Add the following)*

Embedment operations must not damage structures, pipes and fittings, pipe and fitting external coatings, pipe and fitting sleeving or produce any movement of structures, pipes or fittings.

Damaged materials must be replaced.

### **12.3 Concrete Embedment and Encasement**

*(Add the following)*

Concrete encasement of pipes is not permitted without the written approval of Council

## **13 FILL**

### **13.1 Trench Fill**

#### **13.1.1 General**

*(Add the following).*

Backfilling operations must not damage pipes and fittings, pipe and fitting external coatings, pipe and fitting sleeving or produce any movement of the pipe and fittings.

Damaged materials must be replaced.

Trench fill requirements and specifications also apply to general fill around pump stations.

#### **13.1.2 Material Requirements**

*(Replace the contents of the erroneously numbered Clause 33.3 with the following).*

Refer to WRC Standard Drawings and others referring to 'Trench Fill'.

Trench Fill within trenches not under new or proposed roadways, new or proposed improved surfaces, new or proposed trafficable areas or road reserves must be Ordinary Fill as defined by AS2566.2; that is, material obtained from the excavation, or imported, and containing not more than 20% by mass of rock with a size (any dimension) between 75mm and 150mm and none larger than 150mm.

Trench Fill within trenches under new or proposed roadways, new or proposed improved surfaces, new or proposed trafficable areas or road reserves must be Sand as defined by AS2566.2 (Appendix G, Table G3); that is, the same material defined as Embedment Material.

Trench Fill within trenches under existing roads, existing improved surfaces, existing trafficable areas or road reserves must be a cement stabilised sand comprising sand as defined by AS2566.2 (Appendix G, Table G3) and 5% cement by weight.

#### **13.1.3 Compaction of Trench Fill**

*(Add the following)*

Table 36.2 'Minimum Compaction of Embedment and Trench / Embankment / Other Fills' does not apply.

Table 22.1 and Table 22.2 of WSA 02-2002 apply.

Compaction of trench fill material using water flooding is not permitted.

## **14 CONNECTION TO EXISTING GRAVITY SEWERS**

*(Add the following)*

All connection to existing sewers or sewerage infrastructure must be undertaken by Council at the Contractors expense.

A cost estimate of the works to be undertaken by Council will be provided to the Contractor and the connection will not be made until the payment is made to Council. An undertaking to pay the actual costs of the work, signed by the Contractor, must accompany the payment.

The Contactor must provide Council, affected neighbouring residents and the Superintendent with five (5) working days' notice of the proposed connection commencement date.

Connections to existing pipes in-service shall be made at such times as will cause the least interference with the system operation.

If Council is to perform the connection:

- All connection to existing sewers work undertaken by Council shall be at the Contractors expense; and
- A cost estimate of the works to be undertaken by Council will be provided to the Contractor and the connection will not be made until the payment is made to Council.

If the Contractor is to perform the connection:

- The Contractor must obtain Council's written approval to perform the works;
- A Council representative shall attend all works involved in connecting to existing sewers (including plugging of live mains);
- The Contractor must follow Council directions;
- The Contractor remains responsible for all matters relating to the health and safety of the Contractor, his employees and those affected by the works;
- All costs incurred by Council due to Council involvement in connection to existing sewers shall be at the Contractors expense;
- A cost estimate of the works to be undertaken by Council will be provided to the Contractor and the connection must not commence until the payment is made to Council. A signed undertaking to pay the actual costs of the work must accompany the payment;
- The Contractor must co-ordinate the work including notifications to Council, the Superintendent and the Developers representative;
- The Contactor must provide Council, the Superintendent and the Developers representative with 5 working days' notice of the work commencement date; and
- Council reserves the right to stop, or take over, works being undertaken by the Contractor, if, in Council's opinion, the Contractor is incapable of completing the connection work in a reasonable time, Council's infrastructure may be damaged or undue inconvenience to the public may be caused.

## **15 RESTORATION**

### **15.1 General**

*(Add the following)*

References to 'trench' in this Clause 35 amendment shall also be read as 'excavation'.

### **15.2 Pavements**

*(Add the following)*

Final restoration of pavements must include the removal of temporary restoration works.

Backfilling must restore full support to those structures or surfaces (including kerb and channel, road pavements or other improved surfaces) tunneled under in lieu of trenching.

### **15.3 Provision for Settlement**

*(Add the following)*

Further backfilling must be carried out, or the original backfill trimmed, at the end of the Defects Liability Period so that the surface of the completed trench matches design and/or adjacent finished surface levels.

Subject to Council approval, and to the satisfaction of the Superintendent, material excavated from trenches and surplus to backfill requirements may be disposed of by spreading neatly in the vicinity of the trench in such a way as to avoid future erosion of the backfill and adjacent ground surfaces.

Trench backfill finished surfaces must be levelled at the time of backfilling where the reasonable convenience of persons would be impacted upon if the backfill was left 'high'. Subsequent settlement must be made good by additional filling at the time that the settlement becomes apparent.

### **15.4 Maintenance of Restored Surfaces**

*(Add the following)*

Backfill and adjacent areas must be maintained throughout the Defects Liability Period.

## **16 ACCEPTANCE TESTING**

*('Acceptance Testing' shall be read as 'Acceptance Inspections and Testing')*

### **16.1 Pipelines**

This Clause 36.1 title is amended to '36.1 General'.

*(Add the following)*

Construction of gravity sewers and maintenance structures, including acceptance testing of such, shall be in accordance with the requirements of WSA 02-2002 'Sewerage Code of Australia'.

## **16.2            Compaction Testing**

### **16.2.1 Trench fill compaction testing**

#### **16.2.1.1        Frequency and location of tests**

*(Add the following)*

The contractor shall perform compaction tests 75mm to 100mm below the top surface of the fill layer to be tested.

Fill material within a trench traversing existing, proposed or new roads and road reserves must be tested for compaction in at least one location in each 300mm of fill material depth along the trench length within the road or road reserve extents.

## **16.3            Air Pressure and Vacuum Testing of Gravity Sewers**

### **16.3.1            Testing of concrete emergency storage and maintenance structures**

#### **16.3.1.1.        General**

*(Add the following)*

Initial pressure testing and acceptance pressure testing requirements for emergency storage structures shall be determined by Council on a project specific basis given the variety of emergency storage structure types.

The performance of initial pressure testing on emergency storage structures in the presence of the Superintendent and Council constitutes a **WITNESS POINT**. The Superintendent shall advise, at the time of notification by the Contractor, whether the option for the Superintendent to inspect the initial pressure testing is to be exercised. Council shall advise at the time of notification by the Superintendent whether the option for Council to inspect the initial pressure testing is to be exercised.

The performance of acceptance pressure testing on emergency storage structures in the presence of the Superintendent and Council constitutes a **HOLD POINT**. The Superintendent's and Council's presence during acceptance pressure testing and sign-off of the test result certificates, as satisfactory is required prior to the release of the hold point.

## **16.4            Hydrostatic Pressure Testing of Pressure Mains**

### **16.4.1            General**

*(Add the following)*

The performance of acceptance pressure testing in the presence of the Superintendent and Council constitutes a **HOLD POINT**. The Superintendent's and Council's presence during acceptance pressure testing and their sign-off of the test result certificates, as satisfactory, is required prior to the release of the Hold Point.

Pressure mains shall be tested in sections approved by Council as soon as practicable after each section has been laid, jointed and backfilled, provided that:

- if so specified, or if the Contractor so desires, some or all of the pipe joints shall be left uncovered until the whole of the section has been successfully pressure tested;

- pressure testing shall not commence earlier than seven (7) days after the last concrete thrust or anchor block in the test section has been cast; and
- pressure testing shall not be carried out during wet weather unless approved by Council.

A test section is defined as a length of pressure main which can be effectively isolated for testing, e.g. by means of main stop valves.

The length of pressure main tested in one test event must not exceed 1000 metres.

Pressure main of different diameter shall be tested separately and shall not be tested in the same test event.

Any failure, defect, visible leakage or excessive leakage detected during the Defects Liability Period shall be rectified by the Contractor at the Contractor's expense.

#### **16.4.2 System test pressure**

*(Replace the contents of Clause 36.5.2 with the following)*

The system test pressure shall be a minimum of 900kPa measured at the highest point in the test section.

#### **16.4.3 Maximum allowable loss**

*(Replace the contents of Clause 36.5.3 with the following)*

Calculate the Maximum Allowable Loss Rate (Q) as follows:

$$Q = ((0.000532 + (C / L_p)) \times D \times L \times (H)^{0.5}$$

Where:

- Q = Maximum Allowable Loss Rate (litres per hour)
- C = 0.0548 (for D.I. pipe) or 0.0568 (for PVC pipe)
- D = nominal diameter of pipe (mm)
- L = length of section tested (km)
- H = average test head (m)
- L<sub>p</sub> = average pipe length (m) = L ÷ n
- n = total number of pipes + total number of fittings (in the section tested)

Alternatively, the Maximum Allowable Loss Rate (Q) may be calculated by the following simplified formula for the specific pipe types and associated average pipe lengths tabulated. The simplified formulae are based on coefficient "C" value as noted.

| Pipe Type | Simplified Formula                | Coefficient "C" | Average Pipe Length (m) |
|-----------|-----------------------------------|-----------------|-------------------------|
| DI        | $Q = 0.0105 \times D.L (H)^{0.5}$ | 0.0548          | 5.5                     |
| PVC       | $Q = 0.01 \times D.L(H)^{0.5}$    | 0.0568          | 6.0                     |

#### **16.4.4 Test Procedure**

*(Add the following)*

Prior to preliminary pressurisation (refer to Section 36.5.4 (c) the pressure main must be kept full of water for a period of not less than 24 hours.

During testing all pipe joints which have not been backfilled must be clean, dry and accessible.

During testing each stop valve must sustain, at least once and for at least 15 minutes, the full test pressure on one side of the valve in closed position with no pressure on the other side.

#### **16.5 Electrical Works**

*(Add the following)*

The Contractor is responsible for acceptance testing of the completed pump station electrical installation.

The Contractor must provide all testing and calibration equipment and instruments as required.

Megaohm meter testing must not damage any electronic equipment.

The performance of acceptance testing on the completed pump station electrical installation in the presence of the Superintendent and Council constitutes a **WITNESS POINT**. The Superintendent shall advise, at the time of notification by the Contractor, whether the option for the Superintendent to inspect testing is to be exercised. Council shall advise at the time of notification by the Superintendent whether the option for Council to inspect testing is to be exercised. If exercised, the Superintendent's and Council's inspection of testing and sign-off of the test results, as satisfactory, is required prior to the release of the Witness Point.

#### **16.6 Sewage Pumping Station Site Testing**

*(This Clause 36.10 is an additional sub-clause to Clause 36 of WSA 04-2005)*

Sewage Pumping Station Site testing (Site Testing) must be performed once the works are substantially completed and the equipment is in a condition to be tested.

Site testing must include, but not be limited to the following:

- Performance tests of the mechanical and electrical equipment;
- Adjustments and setting of all field control and safety devices;
- Noise level measurements;
- Electrical and control tests as detailed below;
- Functional check of all control and instrument loops and logic testing of circuitry and programs;
- Verification of calibration of all flow meters;
- Setting and calibration of all other instrumentation;
- MEN Earthing: Conformation of effective earthing of exposed metal of electrical

equipment;

- A static and dimensional inspection to establish that all items of equipment are complete and the equipment is ready for no-load operation;
- No-load operation to demonstrate that all equipment functions successfully, both separately and as components of integrated systems;
- Design load/acceptance operation to demonstrate that all equipment can successfully and reliably operate under working conditions;
- checks and tests stipulated by those Australian Standards relevant to the works; and
- checks and tests required by the Electricity Supply Authority.

Submit a Site Testing Program to the Superintendent two (2) weeks prior to the commencement of any site testing.

All testing equipment, labour and necessary facilities for all tests must be supplied by the Contractor. Site testing of all equipment must be supervised by the Contractor and representatives of the relevant sub-contractors.

If it is not possible to activate any electrical protective equipment or device, use a simulate test to trigger a change of state in the RTU and observe control system functionality.

Further to the requirements of clause 33.5 of WSA 04-2005-2.1, which details electrical works acceptance testing to be performed, further specific site tests must be performed in relation to all aspects of the sewage pumping station as detailed in the Pre-Commissioning Record Sheets and as identified by the Contractor's Site Testing Program and ITP

Specific site test results must be recorded and submitted as test certificates. The Pre-Commissioning Record Sheets must also be completed appropriately.

The performance of the specific site tests on the sewage pumping station in the presence of the Superintendent and Council constitutes a **WITNESS POINT**. The Superintendent shall advise, at the time of notification by the Contractor, whether the option for the Superintendent to inspect testing is to be exercised. Council shall advise at the time of notification by the Superintendent whether the option for Council to inspect testing is to be exercised. If exercised, the Superintendent's and Council's inspection of testing and sign-off of the test results, as satisfactory, is required prior to the release of the Witness Point.

#### **16.7 Detectable Marking Tape**

*(This Clause 36.11 is an additional sub-clause to Clause 36 of WSA 04-2005)*

Demonstrate detection of buried detectable marking tape in the presence of the Superintendent following completion of trench and structure backfill. Demonstrate at the rate of one in seven sewer- sections/structures.

The performance of detection demonstrations in the presence of the Superintendent constitutes a **HOLD POINT**. The Superintendent's presence during detection demonstrations and sign-off of the test results, as satisfactory, is required prior to the release of the hold point.

The performance of detection demonstrations in the presence of the Council constitutes a **WITNESS POINT**. Council shall advise at the time of notification by the Superintendent whether the option for Council to inspect the detection demonstrations is to be exercised.

## 17 COMMISSIONING

### 17.1 General

*(Add the following)*

Field testing shall mean site testing.

Tests and inspections shall comply with relevant Australian Standards.

### 17.2 Pumping Station

#### 17.2.1 Pre-Commissioning

*(Add the following)*

*Pre-commissioning is the preparation of plant or equipment so that it is in a safe and proper condition and ready for commissioning and operation. It includes all aspects of plant operation such as safety, electrical, mechanical and instrumentation.*

Pre-commissioning is the culmination of all works inspections and testing, all acceptance inspections and testing and all inspections and testing noted on the pre-commissioning record sheets.

Submit a Pre-Commissioning programme to the Superintendent for review two (2) weeks prior to the commencement of any site testing.

The pre-commissioning process shall include, but is not limited to:

- Completion of all works inspections and testing;
- Completion of all acceptance inspections and testing;
- Completion of all inspections and testing (other than those conducted as part of 'Acceptance Inspecting and Testing') as listed on the Pre-Commissioning Record Sheets;
- Completion of mechanical, electrical and control component testing;
- Completion of equipment and system operational tests;
- Submission of all inspection and testing results to the Superintendent;
- Submission of all Superintendent-verified inspection and testing results to Council;
- Submission of all manufacturer's compliance certificates for items, materials and equipment supplied, including, but not limited to, pipes, valves, pumps, flow-meters and electrical equipment, to the Superintendent;
- Submission of all Superintendent-verified manufacturer's compliance certificates to Council;
- Submission of all as-constructed information, including but not limited to drawings, to the Superintendent;
- Submission of all Superintendent-verified as-constructed information, including but

not limited to drawings, to Council;

- Submission of the 'Pump Data Record Sheet' to the Superintendent;
- Submission of the Superintendent-verified 'Pump Data Record Sheet' to Council;
- Initial charges of lubricants to pump arrangements;
- Proving the installations functional aspects such as rotation direction checks, balancing and vibration checks, temperature, pressure and flow measurements, control and protection equipment including adjustment of instrument set points and alarm settings and proving correct operation of alarms; and
- Proving the installations dimensional aspects such as assembly completeness, alignments and clearances.

Notwithstanding the hold-point and witness-point requirements noted elsewhere, the presence of the Superintendent and Council, during the various inspections and tests that constitute the pre-commissioning process, constitutes as a minimum a **WITNESS POINT**. The Superintendent shall advise, at the time of notification by the Contractor, whether the option for the Superintendent to witness any of the various inspections and tests that constitute pre-commissioning is to be exercised. Council shall advise at the time of notification by the Superintendent whether the option for Council to witness any of the various inspections and tests that constitute pre-commissioning is to be exercised. If exercised, the Superintendent's and Council's sign-off of test results, as satisfactory, is required prior to the release of the Witness Point.

Following completion of all inspections and tests, and other physical pre-commissioning process aspects, the submission of:

- satisfactory inspection and test results (refer paragraph below; 3 copies);
- all as-constructed information (refer Clause 39);
- the 'SPS Operations and Maintenance Manual' (refer Clause 39.3; 3 hard copies and 1 electronic soft copy);
- the 'Pump Data Record Sheet' (refer Appendix B); and
- the Commissioning Programme (refer to Clause 37.2.1; 3 hard colour copies)

From the Contractor to the Superintendent, the Superintendents verification that the submitted information satisfies the construction specification requirements, and then submission of the verified information by the Superintendent to Council, constitutes a **HOLD POINT**. The submission as a whole will be referred to as the 'Pre-commissioning Submission'.

Inspection and test results to be submitted include, but are not limited to:

- Works inspection and testing results (refer clause 20.9 (amended));
- Acceptance inspection and testing results (refer clause 36 (amended)); and
- Pre-commissioning Record Sheet inspection and testing results (refer Appendix A).

The basis of the inspection and test results submission is the works inspection record sheets, the works testing record sheets, the acceptance inspection record sheets, the acceptance testing record sheets, the 'Pre-commissioning Record Sheets' and any other record sheet required to adequately record all inspection results or test results not described on the record sheets noted here.

Council's review and acceptance of the Pre-Commissioning Submission is required

prior to the release of the Hold Point. Pumping station commissioning shall not commence until the Hold Point is released.

### **17.2.2 Commissioning**

*(Add the following)*

*Commissioning is the running of the plant and equipment to ensure flow through the pumping system, and carrying out any necessary inspections, tests and adjustments until the sewage pumping station is ready and suitable for normal starting and running under service conditions.*

A commissioning programme must be submitted to the Superintendent and Council for review (refer Clause 34.2.1).

The Contractor must give the Superintendent a minimum of five (5) working days' notice of the intention to commence commissioning and can only provide that notice after release by Council of the Hold Point stipulated in the Clause 34.2.1.

Commissioning inspections and tests must be carried out by qualified personnel. The commissioning process shall include, but is not limited to:

- Completion of pump performance tests in accordance with the 'Pump Performance Test Sheet' (refer Appendix D); and
- Completion of all inspections and tests noted on the 'Commissioning Record Sheet' (refer Appendix C).

The performance of commissioning inspections and tests in the presence of the Superintendent and Council constitutes a **HOLD POINT**. The Superintendent's and Council's presence during commissioning and their sign-off of the Record Sheets, as satisfactory, is required prior to the release of the Hold Point.

Pump performance testing must demonstrate that:

- Fixed-speed pumps operate at flow and head required under all operating condition to achieve the performance requirements; and
- Variable-speed pumps operate at flow and head required under all operating conditions over the entire range of operating speeds to achieve the performance requirements.

Commissioning is not complete until the pump station has been run continually without any faults for a minimum of fifteen (15) days in accordance with required control and operation procedures. If during this period any mechanical or electrical equipment does not operate as specified, then the commissioning must be repeated after rectification of defects. All rectification works and the cost of additional commissioning will be at the Developer's expense.

### **17.2.3 Handover**

*(Add the following)*

The sewage pumping station must be complete and be in working order, as demonstrated by the successful completion of the pre-commissioning and commissioning processes, before the works are accepted by Council either as 'on-maintenance' or as 'practically complete'.

## 18 TOLERANCES ON AS-CONSTRUCTED WORK

*(Add the following)*

Construction of gravity sewers and maintenance structures, including as-constructed tolerances of such, shall be in accordance with the requirements of WSA 02-2002 'Sewerage Code of Australia'. Refer to Clause 23 of WSA 02.

Road and hardstand construction tolerances are not specified by this document.

## 19 WORK AS-CONSTRUCTED DETAILS

### 19.1 General

*(Add the following)*

Refer to Council's construction specification CP1 'Construction Procedures'.

Further to the requirements of CP1, as-constructed Drawings must show:

- sewage pumping station details;
- maintenance structure location (perpendicular distances to property boundaries), type, level;
- house connection branch location (distance to centre of downstream MH), type, depth to top-of- riser;
- pipeline locations / alignments, size, type, levels and grades; and
- easement extents.

Structures represented on design drawings and removed during the works (including but not limited to pipe, fittings, pavements etc.) must not be represented on the as-constructed drawings.

Structures represented on design drawings and made redundant during the works (including but not limited to pipe, fittings, pavements etc.) must be noted as 'redundant' on the as-constructed drawings.

Areas of side-fill which contribute to the structural integrity of pipelines of a diameter greater than 225mm must be shown on the as-constructed drawings as areas not to be disturbed without performance of an appropriate risk assessment.

### 19.2 Operations and Maintenance Manuals

*(This clause 39.3 is a new clause)*

Operations and Maintenance Manuals must be submitted in hard-copy (paper) form and in soft-copy (electronic pdf) form.

All hard-copy pages and drawings shall be properly reinforced where attached to the binder.

Operations and Maintenance Manuals shall contain at least the following information:

- Cover page displaying:

- Council issued SPS number and SPS name; and
- SPS location (Street, Suburb)
  
- Contents Page
- Section containing:
  - Constructors name, address and telephone numbers; and
  - Principal's Contract number and project description.
- Section containing:
  - Pumping station general arrangement as-constructed drawings.
  - Section relating to pumps (including motors) and containing:
    - details and formatting in accordance with WSA 101-2008 'Industry standard for submersible pumps for sewage pumping stations', Appendix D 'Documentation'; and
    - Safe Work Procedures for all operating procedures and maintenance procedures.
  - Section relating to valves and containing:
    - dimensioned sectional arrangement drawings with associated parts and material list; and
    - Safe Work Procedures for all operating procedures and maintenance procedures.
  - Section relating to Electrical Equipment and containing:
    - Component-part-number list;
    - Technical data sheets;
    - Routine maintenance details & procedures – step-by-step procedures for preventative maintenance work carried out at intervals of two (2) weeks or less;
    - Periodic maintenance details & procedures – step-by-step procedures for preventative maintenance work carried out at intervals in excess of two (2) weeks, including replacement of consumables;
    - Repair & Overhauling – step-by-step procedures for fault correction and for preventative maintenance, involving parts other than consumables. A list of any necessary special tools shall be included; and
    - Recommended spare parts list – illustrations and schedules for identification and specification of all items of equipment.
  - Section relating to Electrical Drawings and containing:
    - Electrical-drawing index;
    - Single-line diagram;
    - Power-distribution schematic;
    - Common-controls schematic;
    - RTU-termination drawings;
    - Equipment list;
    - Cable schedule;
    - Switchboard-label schedule;
    - Site layout (with accurate as-constructed conduit paths noted);
    - Switchboard general arrangement; and

- Switchboard construction details.
- Section relating to equipment warranty and containing all warranty information relating to:
  - Pumps;
  - Motors;
  - Valves;
  - Switchboards;
  - Control equipment;
  - Communications equipment;
  - Other electrical equipment; and
  - Miscellaneous fittings, fixtures, materials and equipment

## **Appendix A**

### **Pre-Commissioning Record Sheets**

Whitsunday Regional Council  
Construction Specification: Sewage Pumping Station

| Pre-Commissioning Record Sheet<br>Mechanical Installations |                                                                                                                                                                                                              |                                |           |  |

| 2                                             | Plates & labels installed                                                                                                |  |  |  |
| 3                                             | Covers & frames greased                                                                                                  |  |  |  |
| 4                                             | Non hinged covers have lifting-lugs provided                                                                             |  |  |  |
| Pipes & Fittings                              |                                                                                                                          |  |  |  |
| 1                                             | Valves are anti-clockwise closing                                                                                        |  |  |  |
| 2                                             | Valve supports installed                                                                                                 |  |  |  |
| 3                                             | Valve extension spindles installed                                                                                       |  |  |  |
| 4                                             | Pipe supports installed (to horizontal pipes) & are constructed of 316 stainless                                         |  |  |  |
| 5                                             | Valve hand wheel installed                                                                                               |  |  |  |
| 6                                             | All pipework of correct diameter                                                                                         |  |  |  |
| 7                                             | Gate valves operate through full range & are in open position                                                            |  |  |  |
| 8                                             | Flap valve on valve chamber drain installed                                                                              |  |  |  |
| 9                                             | Valve coatings as per Council requirements                                                                               |  |  |  |
| 10                                            | Pipework coatings as per Council requirements                                                                            |  |  |  |
| 11                                            | Inlet pipe dropper installed                                                                                             |  |  |  |
| 12                                            | Flange bolting system as per Council requirements                                                                        |  |  |  |
| 13                                            | All valves pumps can be removed from well through opening                                                                |  |  |  |
| 14                                            | Flanged dismantling joints installed                                                                                     |  |  |  |
| 15                                            | All bolts are 316SS & Nuts are 304SS                                                                                     |  |  |  |
| 16                                            | Emergency pump-out pipework (incl. camlock arrangement) installed                                                        |  |  |  |
| 17                                            | SRM air releases/SRM scours installed                                                                                    |  |  |  |

| Pre-Commissioning Record Sheet<br>Civil Works |                                                                                                  |  |      |

Whitsunday Regional Council  
Construction Specification: Sewage Pumping Station

ADDENDUM TO  
DUAL WATER SUPPLY SYSTEMS  
WSA 03-2011

#### NWD 2.2 Water Supply Mains – Drinking Water

Buried appurtenances shall be colour coded blue.

#### NWD 2.3 Water Supply Mains – Non-Drinking Water

Buried appurtenances shall be colour coded lilac.

#### NWD 3.1 Design – Demands

Fire-fighting demands shall be provided from the drinking water mains.

#### NWD 3.4 Cross-Connections between Drinking and Non-Drinking Water Supply Systems.

No cross-connections, either permanent or temporary, shall be installed between drinking and non-drinking water supply systems downstream of Councils headwork storages without prior council approval.

##### NWD 3.4.2 Temporary Cross-Connections

No temporary cross-sections shall be installed downstream of Councils headwork storages without prior council approval.

#### NWD 3.5 Sizing of Mains

The sizing of external non-drinking water mains shall be undertaken by the Consulting Engineer.

The standard sizes for non-drinking water mains shall be the same as the standard sizes for drinking water mains.

#### NWD 3.7 Location of Mains

Water mains shall be laid on the standard alignment – refer to Section D6.10 of this manual. Where the non-drinking water mains and drinking water mains are laid in the same footpath, the drinking water main shall be laid nearest to the property boundary. Access to the valve and pipe need to be clear of the footpath.

#### NWD 3.8 Main Depths

The depths of non-drinking water mains shall comply with the requirements for drinking water mains.

#### NWD 3.10 Property Services

The size of non-drinking water property services shall be DN20 or DN25 as agreed with Council. Where non-drinking water and drinking water property services are laid across a road at a common location, the services shall be placed in a common DN100 conduit. Meters for the non-drinking water shall be placed above ground.

#### NWD 3.12 Hydrants

Hydrants shall only be installed on the drinking water mains. Flushing points shall be provided on the non-drinking main, at all ends of line and cul-de-sac heads. Flushing points shall consist of an isolation valve and camlock coupling with dust cap.

#### NWD 3.18 Identification Markers and Marker Posts

Identification markers for the components for the non-drinking water network shall comply with that specified for drinking water components except that:

The hydrant road pavement markers shall be purple.

Where there is no road pavement adjacent to hydrants, posts with reflective indicator plates shall be installed similar to that for the hydrants marker posts on drinking water mains.

All marker posts for the non-drinking water components shall have the letters

NDW added to the lettering on the indicator plates and the top of the marker posts painted purple.

#### NWD 7.1 Tapping of Mains

Tapping of non-drinking water mains shall be carried out to the same requirements as specified for tapping of drinking water mains.

#### NWD 8.3 Independent testing of Reticulation Main

The test pressure for non-drinking water property services shall be 1.2 MPa.

## 1 Scope of Specification

This specification covers the requirements for materials and the standard of workmanship to be employed in the construction of low voltage electrical switchboards. Note however that this document is not a complete electrical specification. A job specification will need to be provided for any given project. The checklist provided in Appendix G will provide some guidance on the elements required to be covered under the job specification.

Design of sewerage pumping station switchboards is to be carried out generally in accordance with WSA 04 Sections 6 – 8 (inclusive).

This specification should be read in conjunction with WSA 04 Sections 20.6, 20.9 and 21.6 and the job specification to determine the requirements for a particular project. Any conflict between WSA 04, this specification and the job specification should be referred to the Superintendents Representative for clarification.

Appendix F contains a schedule for the submission of design information, inspections, testing and as-constructed information.

While this specification represents the current preferred standards, Council is prepared to consider new developments that may offer advantages such as cost saving, improved control or reliability. Any such alternatives are to be submitted to the Superintendents Representative for approval prior to purchase.

## 2 Design Philosophy

This switchboard shall be designed and constructed to:

- Ensure safe, reliable and efficient operation;
- Withstand the electrical and mechanical loads, temperatures, pressures and vibration that will be encountered under normal service and fault conditions;
- Ensure that operation or failure of any component does not cause damage to other equipment;
- Minimise electrical interference;
- Require the minimum of maintenance;
- Prevent the ingress of dust, moisture, vermin or other foreign matter; and
- Facilitate operation, cleaning, maintenance and repairs.

The switchboard manufacturer shall confirm the electrical loads of all equipment supplied from the switchboard and shall determine the ratings of all switchgear and protective equipment.

## 3 Standards and Regulations

Design, materials and workmanship shall conform to the requirements of:

- WSA 02-2002 – Sewerage Code of Australia;
- WSA 04-2005 – Sewage Pumping Code of Australia;
- Queensland Electrical Safety Act, Regulations and Code of Practices;
- Ergon Energy;
- Australian Communications and Media Authority (ACMA);
- Any other Authority having jurisdiction over the works;
- All relevant Australian Standards;
- Relevant IEC Standard or British Standard where no Australian Standard exists; and
- To the satisfaction of the Superintendents Representative.

The contractor shall be responsible for ensuring that all equipment and materials supplied are in complete accordance with the requirements of all relevant authorities and that all required approvals are obtained.

#### 4 Operating Conditions

All equipment shall be suitable for operation in a tropical coastal environment.

Unless specified otherwise in the job specification the equipment will be required to operate continuously under the following conditions:

|                             |                             |
|-----------------------------|-----------------------------|
| Minimum ambient temperature | 4°C                         |
| Maximum ambient temperature | 44°C                        |
| Minimum relative humidity   | 33%                         |
| Maximum relative humidity   | 100%                        |
| Elevation                   | Not exceeding 1000m         |
| Atmosphere                  | Refer to job specification* |
| Location                    | Refer to job specification  |
| Wind Loading                | Refer to job specification  |

\* Note that a corrosive gas (sulphide gas) environment is common at Council wastewater facilities

#### 5 Materials - General

All materials used shall be new and of the best quality, manufactured and tested in accordance with the relevant Australian Standards.

#### 6 Power Supply

Unless specified otherwise in the job specification the power supply will be 400/415V 3 phase 4 wire 50Hz. The switchboard shall be designed for the fault level present at the installation site - refer to job specification.

The control voltage will generally be 230/240V AC or 24V DC. In some cases, additional supplies of 24V AC, 24V DC or 12V DC may be required for instrumentation or telemetry equipment.

The switchboard shall be arranged for a MEN earthing system in accordance with AS 3000 and Supply Authority requirements.

The switchboard shall be constructed to withstand the short circuit stresses generated by the fault level stated in the job specification. If a fault level is not stated, the fault level shall be taken to be a minimum of 35kA rms for one second with a Peak Factor of 2.2 at the source of supply.

All sites operate on a 12V control supply with DC/DC converts as required to operate other low voltage equipment. The 12V battery system shall be sized such that it will run the sites SCADA and telemetry system for a minimum of 24hrs in the event of power failure.

##### 6.1 Voltage Drop and General Cabling Requirements

- All cables shall be sized for 1.3 time's maximum demand of the nominal running currents;
- The maximum voltage drop for any circuit under normal load conditions shall be limited to less than 3½% of the no load voltage at the consumer terminals;

- Motor cables shall be sized such that the maximum voltage drop at the motor terminals under DOL starting conditions is not more than 20% relative to the consumer main no load voltage. This sizing requirement is regardless of whether the motor will be DOL or soft started, they must be sized to allow for DOL starting within 20% voltage drop limits; and
- Joining of cables is unacceptable, unless indicated on the design drawings.

## 7 Metering

Where kWh metering is required in the job specification it shall be installed in strict compliance with the Supply Authority requirements. Refer to Queensland Electricity Connection and Metering Manual. Special attention is drawn to the requirements for spacing / shielding meters from heavy current carrying conductors.

For external switchboards, Supply Authority meters shall be housed in a section of the switchboard with access via a dedicated door that can be fitted with a Supply Authority padlock. A glass viewing window is not required.

When the main switchboard is located inside a building the Supply Authority metering shall be located in a separate cubicle mounted in an external location accessible to the meter readers. The material of construction will be typically stainless steel. A proprietary type metering enclosure can be used. Refer to the job specification for details of meter locations and metering cubicle.

The required metering tariff will be specified in the job specification.

## 8 Switchboard Enclosure

### 8.1 General Construction

The switchboard will be a cubicle type construction, fully front connected and present a complete dead front. Switchboards for a typical water or wastewater pumpstation will generally be constructed to Form 2 separation. Power distribution switchboards or motor control centres will have other form of internal separation specified, e.g. Form 3b or 4b. Refer to job specification (Form factors refer to AS3439).

Cubicles will generally be fabricated from 1.6mm grade 316 stainless steel and be constructed to IP56D to AS60529. Aluminium may be offered with prior approval of the Superintendents Representative. Other materials such as sheet steel may be considered when the switchboard is to be located in environments free of corrosive agents such as control rooms. The job specification will detail if materials, other than stainless steel, can be offered.

The cubicle will be constructed of folded and welded construction. All seams shall be a continuous weld and be ground smooth after fabrication. Spot welding will not be accepted.

Typically, the maximum dimensions for cubicles shall not exceed 2100mm high or 3000mm in length. Where length of the switchboard will exceed 3000mm, the switchboard is to be supplied with suitable shipping breaks complete with appropriate wiring harness, busbar joints and seals between sections.

Avoid contact between metals of widely dissimilar electrode potential to minimise electrolytic corrosion.

### 8.2 Mounting

Cubicles to be suitable for pole / wall mounting or plinth mounting as per job specification. Mounting brackets / bolts for pole / wall mounted cubicles are to be external to the cubicle.

Plinth mounted cubicles are to be fitted with a channel base fabricated from 75 x 40 (min) mild steel channel. The channel base shall have a suitable number of 40 x 40 tags welded to the external long-side edges. Each tag shall have 16Φ hole and shall be used for fixing down the switchboard. The tags shall be positioned so it is possible to drill through them perpendicularly into the supporting material (e.g. concrete) once the cubicle has been positioned. The channel base shall be hot dipped galvanised after fabrication.

Cubicles that cannot be safely lifted by two people shall be provided with removable eyebolts and plugs. Alternatively, for plinth mounted cubicles, tubes can be provided through the channel base to permit the insertion of lifting rods.

Freestanding cubicles shall be stiffened to ensure overall rigidity. Additional stiffening and support members shall be provided where necessary to support heavy equipment. Such members shall be fabricated to the same specification as the cubicle.

### 8.3 Sunhood

All external switchboards are to be fitted with a sunhood. The purpose of the sunhood is to limit the temperature rise within the cubicle caused by direct sunlight thus protecting the internal electronic equipment from adverse heating effects. Sunhoods shall be fabricated from the same material as the cubicle. The sunhood shall project beyond the vertical faces of the cubicle and provide an air gap between the sunhood and the cubicle roof.

The dimensions of the sunhood are to be such that the back, front and sides of the switchboard are protected from direct sunlight (between the hours of 9am to 4pm). It would be acceptable to install additional false plates on the back and sides of the cubicle to prevent direct sunlight falling on the cubicle walls. These false plates would be spaced from the cubicle wall so that a minimum air gap of 50mm is provided. The sunhood shall extend approximately 900mm in front of the switchboard to offer some protection from rain and allow operators to open the external door and access control switches and indicators during wet weather. The sunhood shall be fixed in a manner suitable for the cyclonic wind loading possible at the site. Additional support posts may be required. The support posts can be fabricated from mild steel sections and be hot-dipped galvanised after fabrication. Sun hoods and standoff supports shall be made of the same material as the main switchboard.

### 8.4 Doors, Mounting Pans and Hat Sections

Each cubicle shall be accessible at the front by hinged doors. Doors shall be fabricated as per the cubicle. They shall be of folded construction and fitted with stiffening members to ensure adequate rigidity and freedom from warping. Alternatively, a heavier gauge material may also be used. Each door shall have an M6 stud welded on the inside (lower hinge side corner) for earthing purposes. A 6mm<sup>2</sup> spiralled flexible connection shall be fitted for earth bonding across the door hinges.

Typically, the width of any door shall not exceed 850mm.

Doors shall be fitted with chromium plated hinges of the lift off type. The hinge pins are to be stainless steel. Fixing screws are to be concealed when the door is closed. Door handles are to be chromium plated (unless otherwise specified) padlockable swing handles (e.g. Emka 1107). Detail of handles to be submitted for approval. Door handles are to be locked with Lockwood No. 234A long shank padlocks, keyed to Whitsunday Regional Council's (WRC) master system, with two keys to be supplied to WRC. Doors with a height greater than 600mm shall be fitted with a 3-point roller latch to secure the door at the top, bottom and middle. External doors shall be fitted with a catch stay or strut to hold them in the 120° open position.

External doors shall be fitted with a resilient neoprene gasket retained by metal framing. The gasket shall be compressed when the door is closed to ensure a moisture and dust proof

seal. The gasket shall not be installed in a stressed condition.

Where escutcheon doors are required, they shall be manufactured from either 2mm grade 316 stainless steel or 2mm sheet steel (powdercoated after fabrication). Refer to job specification. They shall be fitted with a chromium plated "T" handle fitted with a standard L&F 92268 series lock. Escutcheon doors shall be fitted with a catch stay or strut to hold them in the 120° open position.

Each cubicle compartment shall be provided with a mounting pan. The mounting pan shall be manufactured from either 2mm grade 316 stainless steel or 2mm sheet steel (powdercoated after fabrication). Refer to job specification. The mounting pan shall be of folded construction and have a 20mm return. Mounting pans will generally be removable to facilitate the initial mounting of switchgear and wiring. They shall be fixed to the rear wall of the cubicle by M6 studs and chrome acorn nuts. Mounting pans are to be of the maximum possible dimensions. Where two (2) or more mounting pans are located in the same compartment they shall neatly butt against each other.

Hat sections are to be manufactured from the same material as the mounting pans and have the same surface finish. Where hat sections are used to support switchgear they must be rigid and not flex when switchgear is operated.

The design of the cubicle shall incorporate sufficient ribs, channels, hat sections and the like to accommodate all equipment mounting and wiring requirements. Screws and bolts shall not project through the walls and doors of the cubicle (screws for labels and door hardware excepted).

Cubicles may be specified for either outdoor or indoor locations. Outdoor cubicles shall have blank external doors. The number of external doors is to be kept to a practical minimum with segregation achieved by internal partitions / escutcheon doors (exceptions - Supply Authority metering and cable zone). All control switches, indicators and the like shall be mounted on an internal hinged escutcheon door. With the prior written approval of the Superintendents Representative, indoor cubicles may have equipment mounted on external doors but such equipment must provide an IP56 seal.

## **8.5 Ventilation**

All cubicles shall be provided with adequate ventilation to ensure that the internal equipment does not exceed the manufacturer's specified operating temperature range when installed on site and operating under typical conditions at full load for extended periods. The effects of heating due to solar radiation shall receive full consideration in the design.

As a minimum all cubicles shall be provided with ventilation openings in each compartment, including the cable zone. The vents shall provide a minimum of 22,500mm<sup>2</sup> total outlet area per cubic meter of internal volume. The ventilation openings shall be provided with a protective cover to prevent the entry of rain. The vents shall be fitted with insect and vermin proof stainless steel gauze and a removable dust proofing media. Ensure the cubicle design and equipment layout will allow the easy replacement of dust-proofing media once the switchboard has been put in to service.

Where increased cooling is required, quiet running forced ventilation equipment shall be employed. Ventilation fans shall be thermostatically controlled and operate under a positive pressure. High quality replaceable filters shall be provided to dust proof the air intakes. For some applications cubicle mounted air-conditioners may be required.

The supplier shall submit for review, drawings and calculations detailing the effectiveness of the proposed ventilation, prior to switchboard construction.

## 8.6 Cable Entry

Each switchboard shall be provided with a dedicated cable zone to facilitate cable entry and glanding. The cable zone is to be not less than 250mm in height (if horizontal) or 250mm in width (if vertical) and be of suitable dimensions to accommodate the field cables. The cable zone shall be fully segregated and shall have a gas-tight seal from the remainder of the switchboard. Access to the cable zone can be either via a hinged door or removable panel fixed with chrome acorn nuts. Gasket seal and earthing of cable zone access shall be as previously specified for external doors. In certain situations, it may be considered impractical to provide a cable zone. For such situations prior written approval is required from the Superintendents Representative before this requirement will be varied.

Cable entry shall generally be through the bottom of the cubicle. Non-magnetic gland plates are to be provided. Brass is the preferred material. Aluminium will be accepted in non-corrosive environments where only non-metallic glands will be used and adequate provision is made to minimise electrolytic corrosion. Gland plates shall be fitted with a neoprene gasket and be secured by screws and nuts. Nuts are to be welded to the underside of the cubicle. Ensure adequate clearance is provided to allow tool access to gland plate fixings, e.g. do not have fixings located under ducts.

For plinth mounted cubicles the gland plates shall be in two (2) sections – one (1) section for cable glands and the other to permit hand access below the cubicle with the other section in place. This is to facilitate cable installation and the tightening of glands.

## 8.7 Surface Finish and Completion

Upon completion of fabrication the cubicle shall be descaled and degreased then given a light buffing. All surfaces are to be free from blemish, scratches, welding splatter and the like.

Unless otherwise specified in the job specification, all cubicles (including stainless steel cubicles) shall be powder coated or painted with 2-pack polyurethane. Surface preparation and coating application shall be in accordance with the manufacturer's instructions. The colour of cubicles shall be specified in the job specification. Escutcheon doors, mounting pans, hat sections and the like shall be white. Powdercoating / painting shall only be done after all fabrication work including the punching of holes and cut-outs has been completed.

A PVC document holder for drawings and a circuit breaker schedule cardholder shall be provided on the rear of a cubicle door.

The cubicle shall be suitably crated / packaged to minimise damage during transportation.

## 8.8 Distribution Boards

Consideration would be given to use of a proprietary line of enclosures for circuit breaker distribution boards and small cubicles such as telemetry panels or marshalling boxes. Such enclosures are to be manufactured from a material suitable for and have an IP rating appropriate to the environment in to which they are to be installed. Full details are to be submitted to the Superintendents Representative for approval before use.

# 9 Switchboard Equipment

## 9.1 Main Switch

The main switch shall typically be a three pole moulded case circuit breaker. In certain circumstances a manual change over switch may be used as a main switch – refer to clause 9.1.1 below. Automatic changeover switches shall not be used as a main switch without written approval of the Superintendents Representative.

The main switch shall be capable of breaking an inductive current 20% (minimum) in excess

of the calculated maximum demand for the switchboard. The main switch shall have a fault rating higher than the prospective fault current at that point of the distribution network but shall not be less than 6kA at 250V A.C. (sym).

The main switch shall be mounted so that it can be operated without opening the escutcheon or exposing live terminals. Where extension shafts are used they are to be suitably supported so that they do not sag thus making door closing difficult. Extension shafts shall not exceed 100mm in length. Hat sections shall be used to mount the switch at a suitable position.

The handle of the main switch shall be padlockable in the off position. It shall be possible to open the escutcheon with the switch in the on position (by use of a tool to operate / defeat the door interlock mechanism).

Care shall be taken to ensure discrimination between the main switch and other downstream circuit breakers.

The line side terminals of the main switch shall be fully shrouded to IP4X such that with the main switch in the off position there are no exposed live terminals in the switch board.

The main switch shall be fitted with an auxiliary contact that is closed when the main switch is closed.

Residual current protection shall only be fitted to the main switch with the express permission of the Superintendents Representative.

#### **9.1.1 Manual Change-over Switches**

For switchboards that incorporate a generator inlet socket or link connection bars it may be preferable to utilise a manual change-over switch as the main switch upstream of the main circuit breaker. The manual change-over switch, whether used as a main switch or not, shall comply with the requirements of clause 9.1 above and the following additional provisions.

The three positions of the change-over switch shall be clearly labelled "Mains" – "Off" – "Generator". It shall be padlockable in the off position.

The manual change-over switch shall have two (2) auxiliary contacts, one that is closed when the switch is closed on mains and the other that is closed when the switch is closed on generator.

#### **9.2 Lightning and Surge Protection**

Protection of circuits against the effects of lightning shall be provided on all switchboards. Protection systems shall be designed in accordance with AS1768 and be suitable for a location category C site.

Primary surge protection shall be provided on incoming mains. The surge protection devices (SPD) shall be of an approved type, housed in a metal enclosure and be segregated from remainder of switchboard equipment. The SPD shall be connected between phase and neutral or phase and earth, as per manufacturers recommendation. The primary SPD shall be located in close proximity to the main switch and the main earth bar. Connecting leads are to be a minimum of 6mm<sup>2</sup>, be as short as practical (consideration to be given to the effect of lead inductance). They shall not be run in ducting or loomed with other wiring.

SPD's shall be capable of discharging a minimum of 40kA (8/20µs waveshape) per phase and incorporate status indication, visible without the need to open the escutcheon door or expose any live terminations. SPD's shall be protected by HRC fuses or circuit breaker in accordance with manufacturer's recommendation.

In high risk installations, such as remote sites more than 150m from adjacent earthing, more stringent surge protection will be required. In these cases, it is recommended that the surge protection capacity be increased to a minimum of 85kA (8/20 $\mu$ s waveshape) per phase.

Secondary protection for communications, data and instrumentation shall be specified elsewhere in this document.

Total length of cable between the active conductors through the surge diverter to earth shall not be more than 50cm.

### 9.3 Busbars

Busbars shall be fabricated from high conductivity copper with radiused edges. The current rating of the busbars shall be minimum 20% higher than that of the associated switchgear. Busbars, where not enclosed within a segregated, earthed chamber, are to be fully insulated. Insulation shall be applied by a hot dip process or heat shrink unless otherwise approved by the Superintendents Representative. Insulation is to be phase coloured.

Connections between busbars shall be tinned. Where it is necessary to have tapped threads in a busbar then stainless steel inserts shall be used to ensure that screw threads do not bear directly on the conductor material. Busbars are to be supported on insulators and be capable of withstanding the stresses arising from the prospective fault currents.

Main busbars will be fully enclosed and with the exception of power take-offs be segregated from other wiring and equipment. Inspection covers are to be provided in each busbar enclosure and at each connection point.

Where flexible busbar is used then correct work practices shall be adopted when cutting, punching and terminating to minimise lamination damage.

### 9.4 Active, Neutral and Earth Links

All links shall be manufactured from brass or copper and have studs and/or tunnels of correct capacity for the wiring to be terminated. Each link shall have at least 20% spare capacity for the termination of future circuits. Links shall be mounted so that access to them is not obstructed by wiring or cables. Active and neutral links shall be mounted on insulated supports and be fitted with a coloured insulated cover (red for active links, black for neutral) over all live surfaces. Neutral and earth links shall have capacity for the individual termination for the maximum number of circuits that can be supplied from the switchboard.

### 9.5 Circuit Breakers (CB)

Circuit breakers are to be used for the protection of all circuits and shall be selected to provide reliable supply. Circuit breakers shall be selected to match the prospective fault current of the switchboard but shall not be less than 6kA at 250V A.C. (sym). Tripping characteristics shall be selected to suit the particular circuit it protects. When selecting circuit breakers consideration must be given to the cable the circuit breaker is protecting and the earth fault loop impedance of the circuit. Cascading of CB's in accordance with manufacturer's instructions is permissible. Circuit breakers shall be graded to ensure correct discrimination.

Circuit breakers used for motor protection shall be matched to the motor ratings and shall not trip on motor starting inrush current but shall trip on all overloads in excess of 125% of full load current. The CB shall not trip on 105% of the rated current continuously. Operating curves shall be submitted on request. Motor circuit breakers shall provide Type 2 short circuit coordination with the motor starter unless otherwise specified in the job specification. Circuit breakers used for motor protection shall have an auxiliary contact fitted to allow for remote signalling of closed status.

If circuit breakers are used as an isolating switch they must also comply with Section 9.6 below.

Circuit breakers will be mounted on a suitable chassis with a standard busbar assembly. Chassis shall have a minimum spare pole capacity of 25%. The operating tags of all circuit breakers are to be accessible without the need to open escutcheon doors or exposing any live terminals. Escutcheon cut-outs are to match the maximum number of poles on the chassis. Insulated pole fillers shall be installed to blank spaces. If mounted on sheet metal hat sections, then these shall be manufactured from the same material as the mounting pans and have the same surface finish.

### **9.6 Isolating Switches**

Isolating switches shall be rated for utilisation category AC-23. They shall be padlockable, preferably by a device integral to the switch. Removable latch dog or clip-on type devices are not acceptable. Isolating switches are to be mounted so that they are operable without the need to open escutcheons or expose live terminals. Where extension shafts are used they are to be suitably supported so that they do not sag thus making door closing difficult. Extension shafts shall not exceed 100mm in length. Hat sections shall be used to mount the switch at a suitable position. It shall be possible to open the door with the isolator in the on position (use of tool to operate defeat mechanism is acceptable). The line side terminals of the switch shall be fully shrouded to IP4X. An auxiliary contact is to be fitted to allow for remote signalling of closed status. Every motor shall have a padlockable isolating switch rated to break the locked rotor current.

### **9.7 Combination Fuse Switches (CFS)**

CFS units will only be used when specifically called for in the job specification. CFS units shall comply with AS60947.3 and be of the double break type. Full interphase shrouding is required throughout the travel of the switch. Utilisation category shall be AC-21 minimum and AC-23 for motor circuits. Fuses shall be of the HRC type and be replaceable without the use of special tools. CFS units shall be flush mounting, dustproof and be padlockable in the off position. On-off status is to be clearly indicated by handle position. An auxiliary contact is to be fitted to allow for remote signalling of closed status.

### **9.8 Fuses**

Fuses shall only be used for circuit protection where approved in writing by the Superintendents Representative. Fuses shall be of the HRC type and comply with AS60269. Fuses selection shall suit the fault level of the installation. Fuse holders shall be a fully enclosed type and have fully shrouded contacts. One full set of spare fuses shall be provided for each rating used, (e.g. where fuses protect a 3-phase circuit then 3 spare fuses shall be provided).

Fault current limiting fuses are to be located in an accessible compartment of the switchboard.

### **9.9 Isolatable Fuse-carrier**

Isolatable fuse carriers shall be used to provide short circuit and over current protection to circuits wired on the line side of main switches or metering equipment. The fuse-carriers shall be of fully insulated construction, have a switched disconnection function and be suitable for equipping aM or gG type HRC fuses. Fuses shall be captive. Merlin Gerin STI or equivalent.

### **9.10 Selector Switches**

Selector switches shall be cam operated with a rotary snap action. Contacts shall have a minimum rating of 10A at 250V. Switches shall be suitable for flush mounting and incorporate an engraved escutcheon indicating switch function and its respective positions.

### 9.11 Pushbuttons

Pushbuttons shall be a heavy duty, IP66 industrial type with a shroud to prevent accidental operation. Contacts shall be rated at 10A minimum and be of the double make-break type with definite over travel limits. Pushbuttons will generally be 22.5mm dia. Colours shall comply with AS 60947.5.1. Start and stop functions shall not be combined in one pushbutton assembly. Emergency stop pushbuttons shall be red mushroom heads, twist to reset.

### 9.12 Indicator Lights

Indicator lights will be of an IP66 industrial type with a diameter of 22.5mm. Colours shall comply with AS 60947.5.1 as per the following table:

| Lamp Colour | Function                           |
|-------------|------------------------------------|
| Green       | Off, Available, Safe condition     |
| Red         | Dangerous condition                |
| Amber       | Fault                              |
| White       | Motor run                          |
| Blue        | Miscellaneous, e.g. Duty selection |

Lamps shall operate off extra low voltage (typically 24VAC) and be of the LED cluster type. Lens caps shall be of the optically enhanced type. Lamp brilliance and colour shall be readily distinguishable regardless of the effect of ambient light.

A lamp test button shall be provided to test all indicator lights. Relays shall be used in the test circuit for isolation purposes. The use of diodes will not be accepted.

### 9.13 Phase Failure Relays

Phase failure relays shall detect loss of phase, phase reversal, undervoltage and phase imbalance and sequence. The relay shall have an integral time delay to prevent spurious operation during momentary fluctuations and shall be self-resetting on restoration of supply.

Typically, a phase failure relay would monitor the main distribution bus within the switchboard to protect equipment from the effects of supply abnormality. A contact controlled by the phase failure relay shall operate in the control circuit of all motors and also a voltage free contact shall be provided for telemetry signalling. A 0-10 minute adjustable time delay shall be provided prior to control circuit re-energisation. The phase failure relay shall be protected by a suitably rated circuit breaker.

For some applications a separate phase failure relay may be required to protect each motor circuit. Where required this will be detailed in the job specification.

Where the switchboard incorporates a change-over switch (either manual or automatic) a separate phase failure relay shall be provided to indicate the status of the Ergon mains supply. This phase failure relay shall be connected to the mains line side of the change-over switch via an isolatable fuse carrier. A voltage free NC contact from this relay shall be wired as a digital input to the telemetry unit to indicate loss of Ergon supply.

### 9.14 Voltmeter

A voltmeter shall be installed to indicate the phase to phase and phase to earth voltage. The voltmeter shall be a 90° quadrant type, scaled 0-500V. The meter shall be 72mm square (min), dustproof and have an accuracy class of 1.5 in accordance with AS 1042. Terminals on the rear of the meter case are to be shrouded. The voltmeter shall be protected by a suitably rated circuit breaker.

### 9.15 Ammeter

An ammeter shall be provided for each motor. The meter shall display the current in each phase of the motor circuit. The meter shall be a 90° quadrant type, scaled so that the full load current is approx. 70% of the meter scale and incorporate a 5 times FLC over scale. The meter shall be 72mm square (min), dustproof and have an accuracy class of 1.5 in accordance with AS 1042. Terminals on the rear of the meter case are to be shrouded. Suitably rated current transformers shall be used where a direct wired type is not practical.

### 9.16 Hours Run Meters

An hours run meter shall be provided for each motor. The meter shall be a minimum 48mm square and consist of a non-resettable cyclometer showing 6 digits plus tenths. Terminals on the rear of the meter case are to be shrouded.

### 9.17 Contactors

Contactors shall be moulded block, electromagnetic, air break type incorporating double break contacts with arching enclosures. Utilisation category shall be AC-3 (AC-4 for duties involving inching or plugging operation). Coils shall be continuously rated to operate at the control circuit voltage. Contactors shall have a minimum of two auxiliary contacts (1 x N/O & 1 x N/C) over and above what is required for the control circuit. It shall be possible to fit additional auxiliary contacts to any contactor in the switchboard.

Special attention is required where ELV control circuits are used. The contactor may be wired to a 240V AC circuit and switched via a pilot relay from the ELV circuit. Alternatively, it may be possible to use contactors with electronic coil circuits.

### 9.18 Control Relays

Control relays will be of the plug in type and shall be rated for continuous operation. Each relay shall have an indicator to show state and be enclosed in a clear dust proof case. Contacts shall be rated for the required duty but shall not be less than 5A. Where current exceeds 12A then a contactor shall be used.

Timer relays will be solid state and of the plug in type or suitable for din rail mounting. They shall incorporate an LED to indicate timer operation. Multi-range, multi-function timers are preferred.

### 9.19 Control Transformers

Low voltage transformers shall be of the double wound type continuously rated with an earthed metal screen between the windings. Output load shall not exceed 80% of the transformers continuous rating.

### 9.20 Current Transformers (CT) (excluding Supply Authority CT's)

Current transformers shall be housed in a self-extinguishing flame retardant housing and be capable of withstanding the switchboard fault level. The rated primary current shall suit the rating of the controlling device. The secondary current shall be 5A and rated to suit the burden of the connected equipment. Measurement CT's shall have accuracy class 2 minimum. When installed the CT shall be easily removable by mounting on busbar links or short flexible cables.

### 9.21 Current Transducers

Current transducers shall be used to monitor current in one phase of a motor circuit via a suitable CT. The transducer shall accept either 1A or 5A CT input (selected by on board link) and provide a 4-20mA output that is proportional to the motor current. This output shall be used to provide remote signalling of the motor current via the telemetry system. Transducers shall be loop powered from a 24VDC supply and shall be easily adjusted to suit multiple current ranges. Devices with integral CT's are preferred.

### 9.22 Power Supplies

Power supplies for instrumentation, PLC or telemetry equipment shall provide a regulated DC output to suit the voltage requirements of the equipment, generally 12V or 24V.

Each power supply unit shall include non-sacrificial protection against input overvoltage and other mains borne transients. Noise rejection characteristics (common mode and normal mode) shall be at least 120dB. Isolation characteristics (input to output) shall provide a capacitance of less than 0.005pf.

### 9.23 Surge Reduction Filters (SRF)

All power supplies to electronic equipment or instrumentation distribution boards will be wired through a suitably rated surge reduction filter. The surge reduction filter shall have rapid response to transients and noise at any point on the sine wave and not be effected by line or load impedance. The SRF shall include MOV protection and LC filter stages and include status indication.

All contactors and coils larger than 5kW shall have surge suppressing snubbers fitted. The size and type selected shall be in accordance to manufacturer's recommendations.

### 9.24 Signal Isolators

Signal isolators shall be fully solid state and be capable of receiving a 4-20mA signal. They shall be installed where the loop impedance exceeds the source device capabilities or where specified. Front panel adjustments shall be provided for span and zero settings. Externally powered devices are preferred.

### 9.25 Transient Barriers

Transient barriers shall be fitted to each end of instrument signal lines, data-lines and communication circuits. The barriers shall incorporate 3 levels of protection (gas arrester, MOV and clamping diodes) and be housed in a DIN mounting enclosure with screw terminals. Current and voltage ratings shall suit the protected equipment.

### 9.26 Terminals

Terminals are to be din rail mounted tunnel screw type. Terminal housings are to be manufactured from 6.6 polyamide and metallic parts from non-corrodible copper with stainless steel screws. Minimum terminal size shall accommodate 4mm<sup>2</sup> wiring. Terminals shall be grouped into sections of common voltage with suitable barriers separating them. An individual terminal shall be provided for each wire. Common terminals shall be linked with a bridging strip. All terminals shall have a clip in plastic number and shall match the numbering shown on the electrical schematics.

Where earth terminal blocks are used for the termination of earthing conductors, the terminal block connection to the rail shall not be relied upon to provide earth continuity. Separate earthing conductors shall be used to ensure continuity to the earth bar. An earth terminal shall be provided adjacent each outgoing circuit.

Special attention must be paid to effects of dissimilar metals when using aluminium din rail.

Knives-edge type terminals are to be used on instrumentation analogue signals to permit isolation and testing. Fuse terminals incorporating HRC type cartridges may be used for instrumentation and I/O circuit power supplies.

### 9.27 Power Outlet

A 15A GPO shall be mounted on the escutcheon door of every switchboard. The GPO will be protected by a 30mA RCD.

### 9.28 3-Phase Power Outlet

When a 3-phase power outlet is specified in the job specification the following shall apply.

A 15A 3 phase, neutral and earth (5 pin) switched socket shall be provided mounted either on the escutcheon door or the side of the switchboard cubicle. A 30mA RCD shall be incorporated into the outlet housing. The outlet shall be Clipsal 56 series or approved equivalent.

### 9.29 Lighting

An 18W fluorescent light shall be provided in each compartment of the switchboard. The light/s shall be switched by a 10A switch on the escutcheon.

Where a sunhood is fitted, an 18W vandal-proof fluorescent light shall be fitted under the sunhood and shall be switched by a 10A switch on the escutcheon.

External lighting shall not be wired on the same circuits as the switchboard lighting.

All lighting circuits shall be protected by a 30mA RCD.

### 9.30 RCD Test Socket

To facilitate the testing of RCD circuits a dedicated, round earth pin, unswitched socket outlet shall be provided on the switchboard escutcheon. All RCD circuits shall be connected to this test socket via a selector switch mounted adjacent to the socket. This will allow the test technician to quickly and safely carry out injection tests for all RCD circuits by plugging the test instrument into the socket outlet and using the selector switch to switch individual circuits to the socket for testing. A suitable warning label is to be fitted adjacent the socket outlet to distinguish its function from a standard GPO. A schedule card is to be provided showing switch position relative to the RCD circuit.

The number of circuits switched by a selector switch is to be kept within practical limits. For switchboards with a large number of RCD circuits multiple selector switches will need to be provided.

### 9.31 Intruder Switches

When intruder switches are specified in the job specification the following shall apply.

Each external door or compartment cover of the switchboard shall have a micro-switch fitted. The micro-switch would be closed when the door / cover is closed. This does not apply to Supply Authority metering compartments. The micro-switches shall be wired in series and connected to a telemetry input to provide remote signalling when a door or cover is opened.

External doors of switchrooms shall have magnetic reed switches fitted to show when a door is opened. These switches would be closed when the door is closed and wired in series with the switchboard micro-switches to a telemetry input.

### 9.32 Site Security Provisions

In addition to the conduit specified in clause 28.1.7, a 10A 1 $\Phi$  circuit breaker shall be provided on the distribution chassis for a future security camera installation.

### 9.33 Anti-Condensation Heaters

Where indicated on drawings, supply and install anti condensation heaters which shall incorporate a thermostat and heat resistant leads. The wattage of the heaters shall have a minimum size of 20 watts per square meter of exposed surface area of the cabinet.

### **9.34 Circuit Terminations (Power and Control)**

The number of terminals and terminal identification shall be based on the outgoing cable connected thereto as follows:

- Sufficient terminals shall be provided for the number of cable cores, including earth wire; and
- Terminals associated with one cable to be numbered consecutively 1, 2, 3 ...etc, with all terminals arranged in one block. The earth terminal shall be adjacent to the terminal containing the highest core number.

## **10 Motor Starters**

### **10.1 General**

Every motor supplied from the switchboard shall be provided with an automatic motor starter. The preferred type of starter is:

- $\leq 6\text{kW}$  – Direct On-Line (DOL);
- $6\text{kW}$  to  $30\text{kW}$  – Soft Starter; and
- $\geq 30\text{kW}$  – VSD

Or as directed by WRC.

When starting current limitations or other operational issues require the use of reduced voltage starting then soft starters shall be used. Only under extenuating circumstances will autotransformer or other starter types be considered.

### **10.2 DOL Starters**

DOL starters shall comprise a contactor and motor protection device (see Clause 11). The starter shall be designed for utilisation category AC3 and an intermittent duty of up to 12 starts per hour. Type 2 coordination with motor protection and short circuit protection devices shall be employed unless otherwise specified in the job specification.

### **10.3 Electronic Starters**

Electronic Starters include soft starters and variable speed drives (VSD) (also known as variable frequency drives (VFD)).

The starter shall be mounted in accordance with manufacturer's instructions paying due attention to the spacing and cooling requirements. The operating temperature of the unit must be maintained within the manufacturer's specification, typically less than  $40^{\circ}\text{C}$ .

Electronic starters shall be protected by semi-conductor fuses in accordance with manufacturer's recommendations.

Ensure that manufacturer's directions are followed with regard to control circuit voltages. Some starters (e.g. AB SMC-Flex) will require the use of control transformers or ELV control voltage.

The disturbance to the electricity supply system due to harmonics generated by the starter shall not exceed the limits specified in AS61000. Radio interference external to the starter shall not exceed the limits specified in CISPR11. The Point of Common Coupling shall be the line side of the main switch of the switchboard that supplies the starter. The chassis of the starter shall be bonded to earth with an earth conductor 20% larger than normal. The supplier shall provide the anticipated harmonic voltages and currents and a conformance statement before construction and shall confirm the predicted values by test during commissioning.

### 10.3.1 Soft Starters

Soft starters shall have a microprocessor based thyristor control circuit for the control of induction motors operating on a three phase 400/415V 50Hz supply. They shall have a continuous rating, of not less than, the maximum input rating of the driven equipment after allowing for motor efficiency. Soft starters shall be selected for 3-wire connection only, utilisation category AC-53b and 12 starts per hour as a minimum duty.

Starters shall have two modes of starting, standard soft start and a current limiting soft start. In standard mode the terminal voltage shall be increased gradually over the selected ramp time. The peak motor starting current is a function of ramp time. In current limiting mode the peak current shall not exceed a user defined value. Starters shall have the provision for energy optimisation when the motor is running; i.e. the power factor is adjusted to suit the motor load conditions. The starters shall have provision for soft stop. Adjustable controls shall be provided for ramp time, acceleration, deceleration, current limit and stalled current.

The starter shall include protection for microprocessor error, phase loss, open circuit thyristor, short circuit thyristor, motor disconnected, controller temperature, locked rotor and thyristor transient voltage. Motor protection features shall include thermistor, undercurrent, and overcurrent. The starter is to include three CT's for accurate motor current measurement. An auxiliary trip input shall be provided to allow connection of external protection devices such as seal failure. Relay outputs shall be provided for run, fault and top of ramp. It shall be possible to reset a fault trip either via a local reset pushbutton or from a remote reset pushbutton. An analogue output shall be provided when specified in the job specification.

Where called for in the job specification the starter shall have a display panel that can be remotely mounted on the escutcheon door. The panel is to include LED's indicating motor status, starter status, trip status and output relay status. The panel shall also include pushbuttons for local motor control and parameter programming. The starter shall be suitable for local or remote control as selected via a control input.

Soft starters shall be wired via a line contactor to provide positive line isolation. A bypass contactor shall be wired to operate when the motor is up to speed. These contactors shall be controlled via outputs from the soft starter. Particular attention is to be paid to the current and voltage ratings of the starters control relays. Use interposing relays or CR circuit or diodes for inductive loads as recommended by the manufacturer. Where a starter incorporates an integral internal bypass, a separate bypass contactor is not required.

In certain applications the use of less featured soft starters may be considered. Written approval from the Superintendents Representative is required for the use of such equipment.

### 10.3.2 Variable Speed Drives (VSD)

Variable speed drives shall be of the solid state electronic type with pulse width modulated output suitable for use with squirrel cage induction motors. VSD's shall be suitable for operation from a 240/415V 50Hz mains supply. VSD's must comply with AS/NZS 61800 and AS/NZS 61000 in terms of EMC and harmonic performance.

The VSD shall offer selectable control methods including V/Hz, sensorless vector control and field oriented control. The drive shall have the ability to model the thermal capacity of the motor in order to calculate the motor temperature.

The VSD shall be C-Tick approved for use within Australia. EMC filters shall be integral to the drive and be in accordance with AS61800. Unless otherwise specified the VSD shall comply with the limits specified for installation in the First Environment. Harmonics shall be limited to the levels specified in AS61000. Special attention is required to applications where regeneration will occur. The use of active front ends or similar will be required. Output

chokes shall be used on installations where motor cable length exceeds the drive manufacturer's recommendation or the motor is not rated for use on a VSD.

The drive shall have a keypad for display of status information, fault messages, parameter programming, drive control and monitoring. It shall be possible to remote mount this keypad on the escutcheon door. It shall be possible to control the drive either locally from the keypad or remotely from a PLC, communications network, operator station or the like. Switching to / from local and remote shall be bumpless. The drive shall also have an integral status display visible when the keypad is removed.

The drive shall have the following I/O as a minimum requirement:

- 1 x Analogue input for speed reference – 4-20mA, 0-10V or -10V/+10V. It shall be possible to set reference speed via keypad, remote potentiometer and analogue signal from PLC;
- 2 x Analogue output – 4-20mA. Programmable for output speed, output current, torque, power;
- 8 x Digital inputs programmable for control signals or external trip signals (e.g. seal failure);
- 2 x Relay outputs programmable for fault or status conditions. Relays to have changeover contact available so they can be used as NO or NC; and
- Thermistor input – for monitoring motor temperature.

It shall be possible to add internal expansion cards to increase the I/O of any type above the minimum requirements. Analogue I/O shall generate an alarm for loss of signal or signal outside of range.

The VSD shall include comprehensive fault monitoring and protective functions. This shall include but not limited to:

- Hardware fault;
- Software fault;
- Phase failure;
- Over current;
- Over voltage;
- Over temperature;
- Cooling fan failure;
- Motor overload; and
- Motor over temperature.

A fault history shall record the last eight faults with a log detailing the operational status at the time of each fault. It shall be possible to reset fault conditions either locally or remotely.

The VSD shall have communications capability and support the following protocols:

- Modbus;
- Profibus DP; and
- Ethernet IP.

The use of an internally mounted option card would be acceptable if the protocol is not included in the basic unit.

It shall be possible to program the drive from a PC via suitable software and connection lead (USB connection preferred over serial). It is preferred that the software does not require the use of a software licence token or dongle. If the software is not available for free download, then a licensed copy shall be provided. The connecting lead shall also be supplied with the drive. The software shall provide the ability to upload, download, modify, store and print a full parameter list and be capable of full monitoring and control of the drive. The software must be downward compatible with earlier versions of the drive firmware.

In a switch room type environment, VSD's shall generally be mounted separate from the switchboard cubicle. The IP rating of the VSD enclosure is to be suitable for the environment but shall not be lower than IP44. Smaller drives (e.g.  $\leq 7.5\text{kW}$ ) may be installed within a segregated, screened compartment of the switchboard provided generous space provisions are made and an effective cooling system is installed. Where it is not possible to install drives in a switch room type environment they shall be enclosed within a cubicle constructed as per Section 8 of this specification with due consideration given to ventilation requirements. It is generally expected that such cubicles will be fitted with an air-conditioner unit.

Variable speed drives are not to be installed in any external cubicles that may be subject to direct sunlight, without prior written approval of the Superintendents Representative.

Care shall be taken to segregate power, control and motor cables. Motor cables for VSD's shall be of the screened type, designed for use with variable frequency motors and be terminated using correct gland types. Screened cables shall be continuous from the motor terminals to the VSD terminals. All wiring and termination is to strictly comply with the manufacturers recommendations.

Where VSD's are used to control sewage pumps, the initial start shall be at 100% to assist with moving potential blockages. After a 30 sec time delay the VSD shall ramp to the required control point as dictated by the control logic.

#### **10.4 Autotransformer Starters**

Written approval from the Superintendents Representative is required for the use of autotransformer starters.

Autotransformer starters are to be of the closed transition type. The autotransformer is to be isolated from the circuit once the motor has started. Autotransformers are to be copper wound, 3-coil type and have tapings at 50%, 65% and 80%. Manually reset over-temperature protection shall be provided for the transformer and shall be separately indicated on the switchboard escutcheon. The autotransformer is to be installed in a separately mounted enclosure remote from the switchboard. Where this is not practical the transformer shall be housed in a totally segregated section of the switchboard lined with fire resistant sheeting and have a separate access door. Adequate ventilation shall be provided to prevent excessive heat build-up in the autotransformer enclosure. All wiring between the autotransformer and the starter shall be insulated with fireproof material.

### **11 Motor Protection**

All motors up to 45kW shall be protected by a thermal overload relay (TOL). The TOL shall provide single phasing protection as well as overload protection. The full load current of the protected motor shall be between 30 - 80% of the current range of the TOL. The TOL shall be ambient temperature compensated, have both N/O and N/C auxiliary contacts and shall be capable of both manual and automatic reset. On motors fitted with a soft starter the TOL shall remain in circuit when the starter is bypassed.

Motors with a rating of 45kW or greater shall be protected by an electronic motor protection relay. The MPR shall provide protection for thermal overload, thermistor, single phasing and asymmetry. The MPR shall have N/O and N/C auxiliary contacts, LED indication and be capable of both manual and automatic reset.

All motors shall be provided with over-temperature protection via sensors embedded in the motor windings, e.g. thermistors. The sensors shall be wired in series and connected to a monitoring relay. The monitoring relay shall have N/O and N/C auxiliary contacts and be capable of both manual and automatic reset. The monitoring relay shall incorporate a time delay function to mitigate unreliable operation on power up. The sensors shall be wired on an

ELV circuit. For motors with an electronic starter, separate monitoring relays need not be provided if the starter incorporates suitable inputs and monitoring functionality.

Submersible pumps (either wet or dry mounted) shall be provided with a means of detecting failure of the mechanical seal and/or ingress of moisture. This protection shall stop/inhibit pump operation via the motor fault circuit. A separate indication lamp shall be provided but it shall be common with other motor protection for telemetry signalling of motor fault.

Unless otherwise specified, conductivity type sensors such as Water In Oil (WIO) are to be used as a local warning indication only. Refer to job specification.

Where equipment is supplied with integral protection devices (e.g. thermal switches, moisture switches, insulation monitors etc.) these devices are to be wired in to the motor protection circuit as recommended by the equipment manufacturer.

Where pump monitoring relays (e.g. Grundfos IO111 or similar) are used, they shall be mounted so that the indicating lights are visible and controls are accessible without the need to open escutcheon doors and expose live parts.

All motor protection circuits shall be arranged for fail-safe operation. Generally, the protective devices will be wired in series to a common, maintained fault relay. Should any device trip, the fault relay would be de-energised and signal a fault condition. The motor would be unavailable for further operation until reset. The protective devices would generally be set for automatic reset but the fault relay shall require manual resetting by the operator. A reset pushbutton shall be provided on the escutcheon door. In addition to the reset pushbutton it shall also be possible to reset motor faults remotely via an output from the telemetry unit.

All circuits shall reset automatically after a power failure unless there is a genuine fault present.

For certain installations additional protection may be required for water void, undercurrent etc. Refer to job specification and consult with the suppliers of mechanical equipment to ensure all control and protection elements required for equipment warranty are incorporated.

Motor control circuits shall incorporate a timer function to prevent excessive, frequent starting of the motor. The time delay between successive start attempts shall be based on the duty rating of the motor (ie number of starts per hour). Where the motor is normally controlled via logic within the telemetry unit or PLC (ie system mode) this timer function will be provided by the control software. The start delay timer does not function in manual control mode.

Each motor shall be provided with an available relay which shall be energised when all protective devices are healthy, supply circuit breaker and motor isolator switch are closed and any process or operational interlocks are true.

## 12 Control Circuits

For basic Form 2 type pumpstation switchboard, there shall be one common control circuit that shall typically operate at 240VAC.

For an MCC style switchboard, Form 3 or Form 4, each motor shall have an independent control circuit that operates at ELV, typically 24VDC.

Circuits that interface to PLC systems shall operate at 24VDC.

A typical motor control circuit shall consist of:

- Duty or Mode selector switch;

- Auto / off / manual selector switch (where required);
- Manual pushbuttons for start, stop and reset;
- Indicator lights for run and common fault;
- Manually reset fault relay;
- Motor available relay;
- Hours run meter (where required);
- Ammeter reading current in each phase (where required); and
- Motor isolator (padlockable).

### 13 Mounting of Equipment

Equipment is to be arranged to prevent inadvertent contact with live terminals during normal operation of switches, resetting circuit breakers or the like.

All door mounted equipment is to have finger-proof terminals or be fitted with insulating boots / covers. Alternatively, the equipment can be completely screened by a clear, removable cover. Equipment mounted on doors shall be positioned so that the door can be fully opened without damage to the equipment. Adequate space shall be left between equipment for wiring and labelling. A minimum of 30mm shall be provided between ducting and equipment terminals.

All equipment shall be grouped in a logical order.

The term escutcheon shall also refer to the external door in an indoor cubicle.

The following equipment is to be fitted on the mounting pan on the rear wall of the cubicle:

- Main Switch\*;
- Circuit breakers\*;
- Isolator switches\*;
- Motor starters;
- Motor protection relays;
- Control relays, timers etc;
- Current transformers, control transformers, power supplies;
- Neutral link, earth link; and
- Terminal strips.

\* The operating handles / tags for switches and CB's are to be accessible from the front of the escutcheon door. Extension shafts are not to exceed 100mm in length. Where hat sections or similar are used they shall be manufactured from the same material and the same surface finish as the mounting pans.

When mounting the main switch and neutral link consideration is to be given to the size of the incoming mains cables. Sufficient space is to be provided for termination. Generally, no equipment is to be mounted within 150mm of the floor of a plinth mounted cubicle.

The following equipment is to be mounted on the escutcheon door:

- Voltmeters, ammeters and associated selector switches;
- Hours run meters;
- Selector switches;
- Pushbuttons;
- Indicator lights;
- GPO;
- Light switch; and
- Any other operating equipment that may be specified, e.g. level control relay.

It shall be possible to reset all protective devices from the escutcheon without the need to access compartments containing live terminals.

A minimum of 20% spare space is to be provided on all escutcheon doors and mounting pans for future equipment. This space is to be in a single, contiguous area and not achieved by multiple small areas.

All equipment is to be fixed with metal thread screws in drilled and tapped holes. Where panel thickness may not provide adequate thread depth to support the equipment then stainless steel threaded inserts may be used.

Use of non-conductive screws (e.g. nylon) will be permitted where insulated fixings are required.

## 14 Cabling

The circuitry, in conjunction with the components and accessories used, shall be arranged to prevent recycling and feedback and shall generally be fail-safe. Power and control wiring within the cubicle shall be minimum 0.6/1kV stranded copper conductor insulated with V75 grade PVC. Conductors shall be sized to suit the application in accordance with AS 3008. Minimum size shall be 7/050 or 30/025 where flexible conductors are required. Wiring from CT's shall be minimum 2.5mm<sup>2</sup> unless otherwise specified. Instrumentation wiring shall be screened twisted pairs – Olex Dekoron or equivalent. Communications wiring shall be suitable for the particular application. I/O wiring, instrumentation wiring and communications wiring shall be segregated from all LV wiring.

Wiring will generally be enclosed within slotted PVC ducting or neatly loomed using nylon cable ties. PVC ducts shall be adequately sized for the number of circuits within and shall be filled to no more than 75% of its capacity. Lids for ducts shall be neatly cut and mitred at corners. Cable looms shall be supported with PVC saddles as necessary. Where wiring is bundled together in either duct or loom all wiring shall be insulated for the highest voltage present. Wiring to equipment mounted on doors or hinged panels shall be of the flexible type and enclosed in PVC spiral wrap adequately fastened at each end.

Wiring from a circuit fitted with a surge reduction filter shall not be loomed with wiring from unfiltered circuits.

Wiring shall be colour coded as follows:

| Function | Colour           | Abbreviation           |
|----------|------------------|------------------------|
| AC Power | 3 phase          | Red, White, Blue       |
|          | 1 phase          | Red                    |
|          | Neutral          | Black                  |
| DC Power | Positive         | Brown                  |
|          | Negative         | Orange                 |
| Control  | 240V Control     | White                  |
|          | ELV Control      | Grey                   |
|          | Analogue Signals | Black, White scr. pair |
|          | Thermocouple     | To suit T/C type       |
| Earth    | Green/Yellow     | G/Y                    |

Every control wire is to be identified with a wire number that completely encircles the wire, Legrand Memocab or equivalent system shall be used. The correct sized sleeve shall be

used so that the ferrule is firm on the wire. The wire numbering shall match that shown on the electrical schematics and shall read from left to right, top to bottom. The wire numbering for each drive or device shall be unique.

Power wiring will be terminated on to equipment using suitably sized crimp lugs. Control wiring will be terminated with correctly sized bootlace pins crimped using the manufacturers recommended tool. Each core shall have sufficient length at each termination to allow a fresh connection to be made.

All field wiring, with the exception of power cables 10mm<sup>2</sup> or greater, shall be terminated at a terminal strip comprised of din rail mounted tunnel type screw terminals. A minimum of 10% spare terminals shall be provided at each terminal strip.

Wiring or 10mm<sup>2</sup> or greater can be terminated directly to switchgear using appropriate crimp lugs or similar.

## 15 Labelling

All equipment shall be identified with an engraved label of a rigid plastic laminate such as Twoplex. The labels shall be screw fixed. Self-adhesive labels or double-sided tape is not acceptable. Labels are to be positioned so that they are not obscured by equipment or wiring. Labels are not to be fixed to removable duct lids.

Labels will generally be black letters on a white background. Warning labels shall be white letters on a red background. Letter height will be selected to suit the particular equipment but as a guide the following shall apply:

|                                  |      |
|----------------------------------|------|
| Switchboard identification label | 25mm |
| Major equipment labels           | 10mm |
| Equipment identification         | 5mm  |

The main switch and motor isolators are to be clearly labelled with 10mm white letters on red background. The OFF position shall be clearly marked.

Each item of equipment shall have a unique tag name and the label shall match the tag names shown on the electrical schematics.

Where a switchboard has multiple sources of supply or contains circuits supplied from other locations (e.g., control circuit interlocks) prominent warning labels are to be installed.

## 16 Fastenings

All bolts, nuts and washers shall be ISO metric complying with the relevant Australian Standards and be manufactured from 316 SS.

Bolts and studs used for constructional purposes shall be provided with a full nut and lock washer. The use of self-locking nuts would be permitted if they are of an approved type that can be used several times without deterioration and the connection is not one that would require frequent undoing. Electrical connections using bolts or studs shall be fitted with flat washer, lock washer and a full nut. Electrical connections using screws shall be fitted with a flat washer and a lock washer.

Screws and bolts shall project a minimum of one thread pitch and not more than three thread pitches beyond the nut or panel. Cover retaining screws shall be of the captive type.

Self-tapping or self-drilling screws shall not be used in any part of the switchboard.

Double-sided tape shall not be used in any part of the switchboard.

## 17 Electronic Equipment

Electronic circuits and components shall be high grade solid state discrete or integrated circuit devices having been substantially derated for the duty required. All components shall be assembled on high quality fire resistant epoxy fibreglass laminate or similar non-hygroscopic printed circuit boards. Each PCB shall be varnished or similarly protected for use in tropical and corrosive environments. Circuit board components shall be liberally spaced and shall have test points and links provided to assist with fault finding.

All equipment shall be suitable for operation in the vicinity of other electrical equipment and have a high degree of immunity to electrical transients and noise.

### 17.1 Telemetry Equipment

Where telemetry equipment is specified in the job specification then it shall be supplied, installed and wired by the contractor. Note that telemetry is required on every sewerage pumpstation switchboard. Unless otherwise specified, WRC technicians will carry out the software configuration and integration into the SCADA system. WRC technicians require a minimum of 6 weeks' notice prior to commissioning to allow for scheduling of tasks in to their works program.

A listing of approved telemetry equipment is provided in Appendix B2. Note that certain equipment is mandatory and no alternatives will be accepted. Possible suppliers are also listed but this does not imply they are the only suppliers that can be used.

WRC is progressively implementing a digital radio network to replace the old analogue radio network. It is expected that all new sites will be digital. Only under extenuating circumstances will new sites be added to the analogue network. In such cases, the job specification will detail requirements.

When telemetry equipment is to be located within the switchboard it shall be located in a dedicated section, preferably with a separate internal access door. The telemetry compartment shall be sized and equipment positioned so that it shall be possible to accommodate the future retrofitting of a Schneider Electric SCADAPack ES P500 telemetry unit or a Serck eNet type telemetry unit (including an additional din rail, terminals and wiring duct for the topside I/O connections). Approximate dimensions of this section would be 800mm x 800mm.

All telemetry equipment is to be wired through a terminal strip located in the telemetry section. Sufficient space shall be left on din rails and in wiring ducts to permit the future wiring of 50% additional of I/O of each type (DI, DO, AI and AO).

The signals would be voltage free contacts or analogue signals. If the analogue signal is part of a loop with several devices, it is to be wired via a signal isolator and the telemetry input shall be the last device on the instrument loop. Telemetry digital outputs would be wired through 12VDC interposing relays. A problem currently exists with SCADAPack P334 units. If the P334 loses power or fails, the analogue current loops will also fail. To ensure the integrity of critical instrument loops, a precision 255Ω resistor is to be wired across the analogue input on the P334. As an example, this will be required on the pump well level input on any sewerage pumpstation RTU.

The 240VAC supply to telemetry equipment power supply is to be supplied via a dedicated circuit breaker wired through a surge reduction filter.

When telemetry equipment is to be mounted in a remote cubicle the required signals shall be wired to a segregated section of the field cables terminal strip. The remote cubicle will be a

stainless steel type of appropriate IP rating, approximately 800 x 800 x 300. The cubicle shall be generally constructed in accordance with Clause 8. Sun protection as per Clause 8.3 is required on all external mounted telemetry cubicles.

The job specification will contain details of scope and location of equipment.

Appendix C contains tables showing the required I/O signals and address assignment for several sewerage pumpstation telemetry scenarios. These assignments are not to be varied without written permission of a Whitsunday Regional Council Electrical or Control Systems Engineer. For other telemetry installations the I/O signals and address assignment shall be detailed in the job specification.

Refer to drawings in Appendix A for a typical telemetry schematic for a sewerage pumpstation.

Note that for pumpstations incorporating more than two pumps, dual RTU's may be required. Refer to job specification.

Refer to Clause 28.2 for additional information relating to installation works associated with telemetry equipment.

### 17.2 HMI Screen

A HMI screen may be requested for an installation at the discretion of Whitsunday Regional Council. Where an HMI screen has been requested, it shall be programmed to show the status of all analogue and digital I/O, status of the PLC and status of the telemetry communications link. All programming delays, counters, offsets and totalisers shall be adjustable from the HMI with the use of a supervisory password, otherwise these parameters will be read only.

In the event where council deems an HMI unnecessary for any installation, spare space shall be provided within the switchboard escutcheon, mounting plane, marshalling, cable entries and door space for an HMI to be retrofitted at a later date. This extra capacity shall be additional to the spare space necessary to fulfil the requirements of the other sections of this specification.

### 17.3 PLC Equipment

PLC equipment shall only be used where complex control functions warrant. **The job specification will contain specific details if a PLC is required.**

When called for in the job specification the following general requirements must be satisfied.

PLC equipment shall be housed in a segregated section of the switchboard, preferably with a separate internal access door. This can be a shared compartment with telemetry equipment.

The PLC and I/O power shall be supplied through an approved surge reduction filter. The PLC shall be programmed via an IBM compatible PC. A licensed copy of the programming software, a software manual and the correct programming lead shall be supplied as part of the works, unless the PLC is of an approved type and Whitsunday Regional Council Electrical or Control Systems Engineer gives written direction that it is not required.

A minimum of one complete set of PLC documentation shall be supplied including a descriptive functional specification, ladder diagram (annotated with ample notes, labels and comments to fully describe code), full label listing and full cross reference table. A backup copy of the PLC code shall be provided on CD-ROM.

#### **17.4 Pump Control Relay**

Refer to Clause 18 below for a discussion of pump control strategies. For installations where a pump control relay is required the following shall apply.

The preferred pump control relay is a Yokogawa UM33A Digital Indicator (with alarms). This relay will accept a 4 - 20mA signal from the level sensor and provide outputs to drive relays for pump control. Ensure that manufacturer's instructions are followed with regard to freewheel diodes or CR networks on outputs. The UM33A incorporates a digital display and is to be mounted on the escutcheon door.

#### **17.5 Sump Pump Control Relay**

In certain applications, such as sump pump control, electrode type level sensors shall be used in conjunction with an electrode relay to control the starting and stopping of the pump. The preferred type of electrode relay is a Multitrode MTR series.

### **18 Pump Control**

This clause is mainly aimed at a sewerage pumpstation installation but could also be applied to other installations. The discussion refers to a typical pumpstation with 2 pumps. For stations with more than two pumps the job specification will detail the pump control requirements.

#### **18.1 Pump Control Strategy**

##### **18.1.1 Telemetry Control with Local Control Backup**

Unless otherwise specified in the job specification, this strategy would be the default method of controlling pumps at sewerage pumpstations.

A four-position selector switch shall be used to select between System / Off / Local Manual / Local Auto. This switch is to be of a distinct colour or have a distinctively coloured escutcheon plate so that it is readily identifiable to operations staff.

When System is selected the motors would be controlled via logic within the PDS telemetry unit. The logic would monitor the well level analogue signal and start / stop the motors by energising digital outputs. The selection of motor duty and level set points would be via remote SCADA system. All motor starter functions and motor protection functions will be incorporated in the system mode control circuit. Faults would be reset by either an escutcheon mounted reset pushbutton or remotely via the SCADA system. Programming of PDS logic and remote SCADA system would be carried out by WRC unless otherwise specified in the job specification. System would be the normal operating mode for a pumpstation.

When Local Manual is selected the motors will be under local manual control via escutcheon mounted start and stop pushbuttons. There will be no automatic or remote control in this mode however remote monitoring via telemetry would be active. All motor starter functions and motor protection functions will be incorporated in the local (manual) control circuit. Faults would be reset via an escutcheon mounted reset pushbutton. It is intended that this mode of control would only be used during maintenance activities or if there was a critical failure of the telemetry or the auto control equipment.

When Local Auto is selected, pump operation would be controlled by a Pump Control Relay (refer to Clause 17.4). Starting and stopping of pumps would be determined by the wet well level and the set points in the pump control relay. The pump control relay will energise interposing relays to operate in the pump control circuits. Duty selection would be via an escutcheon mounted selector. The duty selector is to have an adjacent label stating that it is

only for use in the Local Auto mode. There will be no remote control in this mode however remote monitoring via telemetry would be active. All motor starter functions and motor protection functions will be incorporated in the Local Auto control circuit. Faults would be reset via an escutcheon mounted reset pushbutton. The duty selector, pump control relay outputs and associated control relays will only be active when the selector switch is in the Local Auto position. A time delay is to be incorporated in the Local Auto mode to ensure that pump available relays and other circuitry has operated before the control mode becomes active.

It is only intended that this mode of control is used if there is a critical failure of the telemetry equipment.

## 18.2 Pump Operation Methods

This clause describes two (2) common methods of pump operation employed in WRC sewerage pumpstations. Other methods may be employed to meet the requirements of a particular pumpstation. (refer to the job specification).

### 18.2.1 Pump Operation Method 1

The pumps are configured to operate in a standard duty / standby arrangement. Typically, the two (2) pumps would be the same size. Duty selection is effected via SCADA in System Mode or by an escutcheon mounted selector switch in Local Auto Mode. This discussion assumes that Pump 1 has been selected for duty and Pump 2 for standby. The same principle applies if Pump 2 was selected as duty pump.

When the level in the pump well rises to the duty start level, Pump 1 will start and pump down to the stop level. If the level continues to rise and reaches the standby start level, Pump 2 will start and both pumps will operate in parallel until the stop level is reached. If the duty pump becomes unavailable, then the standby pump will be enabled to operate off the duty start level.

It shall not be possible for both pumps to start simultaneously, e.g. after a power fail when well level may be high.

In some circumstances it is not desirable to have the pumps operate in parallel. In these cases, the duty pump would be stopped at the standby level and after a short time delay the standby pump would start. If the standby pump becomes unavailable, then the duty pump would be re-enabled.

The job specification will detail if parallel operation is required or not.

### 18.2.2 Pump Operation Method 2

This method applies to stations where pumps are of different sizes. Typically, one pump would be sized for 2 x ADWF and would be the main duty pump. The second pump would be sized for 5 x ADWF and would only run during high flow periods (e.g. rainfall events) or when specifically selected by the operator. Pump 1 is always the small pump and Pump 2 is the large pump. Duty selection is effected via SCADA in System Mode or by an escutcheon mounted selector switch in Local Auto Mode. In normal operation Pump 1 is selected for duty. Pump 2 is only selected for duty for a short period each month to exercise the pump.

Normal operation is with Pump 1 selected for duty. When the level in well rises to the duty start level, Pump 1 will start and pump down to the stop level. If the inflow is greater than Pump 1's capacity and the level continues to rise to the standby level, Pump 1 will stop and after a short time delay Pump 2 will start. Pump 2 will pump down to the stop level and turn off. When the level next rises, Pump 1 will resume normal operation. Should Pump 2 fail after operation has initiated then Pump 1 must be re-enabled and start operation immediately. If Pump 1 becomes unavailable, then Pump 2 will operate off the standby level.

It shall not be possible for both pumps to start simultaneously, e.g. after a power fail when well level may be high.

When Pump 2 is selected for duty, Pump 1 will not run under normal conditions. Pump 2 will operate off the duty level. Should Pump 2 become unavailable then Pump 1 must be enabled to operate off the duty start level.

## 19 Miscellaneous Equipment

The equipment discussed in the following Clauses is generally only applicable to sewerage pumpstation installations however it can also be called for other types of installation.

### 19.1 Level Sensor

All sewerage pumpstations are to be fitted with a level sensor. For other facilities it shall only be provided when specifically detailed in the job specification.

Level sensors will be of the hydrostatic pressure measuring type. The housing shall be stainless steel with a capacitive ceramic sensor element and stainless steel diaphragm. This sensor connects to a separately mounted transmitter incorporating zero and span adjustments. Unless otherwise specified the sensor shall be ranged 0 -10m. The sensor shall be supplied with a minimum 12m of cable and a strain clamp for suspension in the pumpwell. In turbulent wells, a stilling tube or suspended weight may be necessary for a satisfactory installation. The transmitter is generally mounted in the switchboard. The transmitter will output a 4 - 20mA/HART signal in proportion to the level in the pumpwell. The preferred type of level sensor is a Vega Vegawell 52 with a VegaDis 62 Transmitter. Typical catalogue number for a Vegawell 52 with HART protocol, 0-10m range and 27m of cable is Vegawell 52.XXA4AMD1DD1X. The part number of the Vega transmitter is DIS62.XXKMCSX (with display). The Vega transmitter shall be positioned in such a way as to allow easy removal / replacement of the cover during installation and calibration work.

### 19.2 High Level Alarm (HL)

All sewerage pumpstations are to be fitted with a high level alarm.

A float switch shall be installed in the wet well to provide a high level alarm signal. The float switch will be a mechanical switch enclosed in a polypropylene ball, suspended by its own cable. The float switch contact shall be a change-over type. The float would operate on a battery backed 12VDC supply (typically the telemetry system power supply) and be an input into the telemetry system. In certain specific applications it may be used to initiate an alarm light as detailed below.

The preferred well High Level float switch is Flygt model ENM 10. The float switch shall be configured fail safe such that a normal well level is a closed input. This input shall be wired directly to the RTU.

### 19.3 Critical High Level Alarm (HHL)

All sewerage pumpstations are to be fitted with a critical high-high level alarm.

A float switch shall be installed in the wet well to provide a critical high-level alarm signal. The float switch will be a mechanical switch enclosed in a polypropylene ball, suspended by its own cable. The float switch contact shall be a change-over type. The float would operate on a battery backed 12VDC supply (typically the telemetry system power supply) and be an input into the telemetry system. In certain specific applications it may be used to initiate an alarm light as detailed below.

The preferred well High High Level float switch is Flygt model ENM 10. The float switch shall be configured fail safe such that a normal well level is a closed input. This input shall be wired directly to the RTU.

The flexible cables shall be capable of supporting the weight of the ball float and cable without the need for additional support. The ball float cable length shall be sized to allow position adjustment within the well entirety. This ball float shall be installed in accordance with the manufacturer's installation instructions at the RL of 300mm below the overflow for the station.

#### **19.4 Alarm Light**

This shall only be provided when specifically detailed in the job specification.

A flashing alarm light shall be installed to indicate high wet well level. This alarm light shall be a weatherproof (IP66D) and vandal proof fitting mounted on top of the cubicle (or external to building). A wire guard shall be fitted. It shall be connected to a flashing relay activated by the float switch detailed above and shall be manually reset by an escutcheon mounted pushbutton. The lamp shall be clearly visible from a distance of several hundred metres.

The alarm light shall operate off either 240VAC or 24VDC as specified in the job specification. Where a DC supply is specified it shall be supplied via a separate battery backed power supply (ie not the telemetry supply).

#### **19.5 Diesel Pump**

This shall only be provided when specifically detailed in the job specification.

A diesel pump is installed at some pumpstations to provide emergency pumping capacity when Ergon supply has failed. The diesel pump will have its own dedicated level sensors and control panel and will operate independently of the electric pumps.

A dedicated 240V 10A circuit breaker is to be provided in the switchboard for the diesel pump battery charger.

The following voltage free input signals are to be wired to telemetry terminal strip:

- Diesel pump started (1 x DI);
- Diesel pump failed to start (1 x DI);
- Diesel pump fault (1 x DI);
- Diesel pump flow (from limit switch on reflux valve) (1 x DI); and
- Starting battery low voltage (1 x DI via suitable relay).

The starting battery low voltage signal can be provided by a process relay similar to APCS PA201. The relay monitors the battery voltage and if it falls below the trip set point (e.g. 10.5V) then an output contact will be used to provide the signal to the telemetry system.

#### **19.5 Disconnection Chamber**

This shall only be provided when specifically detailed in the job specification.

The disconnection chamber shall be an extension of the switchboard cubicle and shall be fabricated from the same materials. The chamber will be fitted with a lockable door and would generally be located at the very bottom of the switchboard. It shall be completely segregated from the rest of the switchboard. The chamber would have no bottom but a gland plate would be fitted between the chamber and the cubicle proper. Cables from the sockets into the switchboard proper shall be fitted with a secure cable gland at the gland plate. The disconnection chamber will require ventilation openings as per Clause 8.5.

The chamber will house decontactor type sockets to allow the disconnection of pumps by non-electrical personnel. The sockets are to be Marechal or equivalent. Matching plug tops are to be supplied for fitting to pump cables. Ensure that the conduit access into the well can accommodate the plug size and can be easily pulled through with all cabling installed.

For some sites it may be preferable to have the pump disconnection chamber separate from the switchboard (e.g., where the switchboard is installed remote from the pumpwell). It would be acceptable to utilise an URD type distribution pillar or a 316 stainless steel cubicle to house the decontactor sockets.

### 19.6 Pumpstation Ventilation Fans

This shall only be provided when specifically detailed in the job specification.

The ventilation fans in pumpstation buildings shall have an Auto – Off – Manual selector switch. In manual they shall operate continuously. In auto they shall be controlled via a 24hour time clock such that they operate for a 30-minute period twice a day, once at 6AM and once at 6PM.

## 20 Emergency Power

Provision is to be made for emergency power at all WRC facilities. At critical sites a permanent standby generator will be installed. The full requirements for a permanent generator will be detailed in the job specification. Clause 20.1 below serves only to highlight some particular requirements. For other sites, provision is to be made for the easy connection of a transportable generator set – refer to clause 20.2 for requirements. There may also be a requirement to allow for future connection of a permanent generator at an installation, at the discretion of WRC. In this case, the switchboard modifications required for future connection of a permanent generator shall be outlined in the job specification, including all applicable parts of section 20.1 below.

### 20.1 Permanent Standby Generator

When a permanent standby generator is to be provided, the job specification will fully detail all requirements. The following are some of the general items required for a diesel generator installation:

- Generators will be supplied with a fuel tank with sufficient capacity for minimum 24 hours running at full load;
- The generator will have a circuit breaker to protect the output cable;
- An automatic transfer switch and logic panel is to be provided to detect loss / restoration of Ergon supply and switching to/from the generator supply. The transfer switch can utilise circuit breakers or contactors to suit the installation requirements. The logic panel is to be a commercially available type. A single switch shall be provided to allow operations personnel to test the generator and change-over function. This switch shall simulate a mains failure, start the generator and transfer site loads on to the generator. A contact from this switch shall be wired to a telemetry input for monitoring purposes;
- Due to the cyclic nature of pump operation it may be necessary to have an automatically switched load bank to prevent the generator running under light load situations. The load bank would typically comprise resistor elements mounted within the exhaust air ducting. The load bank shall be controlled by a load sensing controller. The load bank controller shall have facility to accept a disable signal from the site control system, e.g. this may be used to drop out the load bank prior to large loads coming on line;
- For installations where an internal load bank is not practical, the job specification may call for provision to be made for connection of a transportable load bank. In this case, connection to the switchboard shall be made via a 3-phase 150A decontactor inlet socket (e.g. Proconnect 3PS9A3NE01) via a suitably rated circuit breaker;

- For other sites a stand-alone external load bank may be required. The job specification will detail requirements;
- A dedicated 240V 10A circuit breaker is to be provided in the switchboard for the generator battery charger; and
- The following voltage free signals to be made available at a terminal strip for wiring to the telemetry equipment:
  - Generator running;
  - Generator fault;
  - Generator failed to start;
  - Generator low fuel warning (approx. 2 hours' run-time left);
  - Generator starting battery voltage low (1 x DI via suitable relay);
  - Generator circuit breaker closed;
  - ATS Mains supply position;
  - ATS Generator supply position;
  - Generator test switch active; and
  - Load bank healthy.

If the generator control panel does not provide a starting battery voltage low alarm directly then a process relay as described in clause 17.4 above can be used.

- Where the generator is to be installed external to a building the following requirements shall apply:
  - The unit shall be fully enclosed in a vandal-proof, acoustic enclosure. The top of the enclosure is to be manufactured from stainless steel and painted;
  - The enclosure shall have no glass or perspex panels;
  - Lockable covers shall be provided for all access hatches including radiator filler and fuel filler – to suit WRC padlock system;
  - There are to be no exposed hot surfaces;
  - A cage shall be fitted over the exhaust cap; and
  - Noise rating is not to exceed 70dB at the boundary of the facility.

## 20.2 Mobile Generator Connection

For facilities where a permanent standby generator is not installed and the maximum demand is less than 110kVA (with due consideration for motor starting requirements) provision shall be made for the connection of a mobile generator set. Contact WRC's Electrical Technical Officer to verify what generator connection is required for any given site.

For sites with a maximum demand of less than 110kVA (with due consideration to motor starting requirements) a 150A decontactor type inlet socket is to be provided either fitted to the switchboard (for an external board) or, where the switchboard is located inside a building, mounted in an accessible, external location. The socket is to be a Marechal DS9-3198017, Cutler Hammer CH9A3NE01 or Proconnect 3PS9A3NE01 and is to be mounted in a suitable wall box and fitted with an inlet cap.

For sites with a maximum demand of less than 65kVA (with due consideration to motor starting requirements) a 90A decontactor type inlet socket is to be provided either fitted to the switchboard (for an external board) or, where the switchboard is located inside a building, mounted in an accessible, external location. The socket is to be a Marechal DS6-3168017, Cutler Hammer CH6A3NE01 or Proconnect 3PS6A3NE01 and is to be mounted in a suitable wall box and fitted with an inlet cap.

The following requirements are common to all sites to be fitted with a mobile generator connection:

- A suitably rated circuit breaker is to be fitted downstream of the inlet socket to limit the generator current to suit the switchboard wiring. This circuit breaker is to be suitable for a

fault level of 18kA minimum. The circuit breaker shall comply with Clause 9.5 and also Clause 9.1 in terms of mounting, extension shafts, locking and labelling;

- A manual change-over switch, rated to the generator full load current, is to be provided in the switchboard to select between Ergon supply, off or generator supply. It shall not be possible for both supplies to be selected at the same time. All line side terminals (Ergon and Generator) are to be shrouded to IP4X. The change-over switch shall also comply with Clause 9.1.1 in terms of mounting, extension shafts, locking and labelling;
- A set of three indicator lights are to be wired to the Ergon line side of the change-over switch via a suitably rated isolatable fuse-carriers. The purpose of these lights is to alert operators that Ergon power has been restored. A suitable warning label is required to show these indicators are not isolated by the main switch or change-over switch. Refer also to clause 9.13 regarding the provision of a phase failure relay on the Ergon line side;
- In addition to the inlet socket, a set of terminals shall be provided behind the escutcheon panel as an alternative generator connection point. This is to accommodate generators that do not have an outlet plug compatible with the inlet sockets stated above. Refer to drawing WRC24-R13-03. The cable connecting the generator inlet to the changeover switch, neutral link and earth link shall be flexible cable. The conductors on the socket end shall be terminated with bootlace pins. The cable shall be long enough to allow easy disconnection and reconnection between the inlet socket and the inlet terminals; and
- Provision shall be made in the side of the changeover section for temporary generator cable entry. Any holes or doors provided must not compromise the IP rating of the panel. The cable entry shall incorporate means to support the incoming cable (e.g. gland or clamp).

For certain installations it would be acceptable to have the transfer switch, circuit breaker and decontactor inlet socket mounted in a separate enclosure. The enclosure would be IP56, fabricated from 316 SS, have a blank external door (padlockable or require a special tool to open) and an internal escutcheon door. The inlet socket is to be mounted on side of cubicle and changeover switch and circuit breaker operable from the escutcheon. There shall be no exposed live parts when the external door is open.

### 20.3 Other Facilities

For facilities where a permanent standby generator is not installed and the total demand is in excess of 110kVA (with due consideration to motor starting requirements) or when specified in the job specification, generator connection links are to be provided. The purpose of the links is to permit the quick and easy connection of a transportable generator via a trailing cable. For an outdoor switchboard the connection links are to be housed in a dedicated section of the switchboard. For an indoor switchboard the connection links are to be housed in an IP65 stainless steel enclosure mounted in an accessible, external location.

The generator connection link shall be designed so that the cable termination is adequately protected and supported and all doors, covers and the like can be closed and secured with the trailing cable connected.

The trailing cable shall terminate on to copper busbar with brass studs, stainless steel threaded inserts or bolted connections. All necessary hardware is to be supplied including bolts / studs, flat washers, spring washers and nuts. Stud / bolt size is to suit the size of connected cables but shall be not less than M8. The terminations and busbar are to be shrouded to prevent inadvertent contact with live parts.

The busbar links are to be connected to a manual change-over switch via a circuit breaker using suitably rated cable. The circuit breaker is intended to limit the generator current to match the switchboard design specification and shall have a minimum breaking capacity of 35kA. The circuit breaker shall comply with Clause 9.5 and also Clause 9.1 in terms of mounting, extension shafts, locking and labelling. The connection links and wiring to the circuit breaker are to be rated for a minimum of 150% of the maximum demand of the switchboard.

The manual change-over switch shall be rated for the same current as the main switch. The change-over switch shall select between Ergon supply, off or generator supply. It shall not be possible for both supplies to be energised at the same time. All line side terminals (Ergon and Generator) are to be shrouded to IP4X. The change-over switch shall also comply with Clause 9.1.1 in terms of mounting, extension shafts, locking and labelling.

A set of three indicator lights are to be wired to the Ergon line side of the change-over switch via a suitably rated isolatable fuse-carriers. The purpose of these lights is to alert operators that Ergon power has been restored. Refer also to clause 9.13 regarding the provision of a phase failure relay on the Ergon line side.

For certain installations where the generator connection links are mounted in an external enclosure it would be acceptable to also have the transfer switch and circuit breaker located externally. The enclosure would be IP65, fabricated from 316 SS, have a blank external door (padlockable or require a special tool to open) and an internal escutcheon door. The changeover switch and circuit breaker would be operable from the escutcheon. There shall be no exposed live parts when the external door is open.

## 21 Inspection and Testing

During the construction of the switchboard every facility shall be accorded the Superintendents Representative to inspect the works in progress at any time. The following stages are mandatory inspections:

- Completion of sheet metal fabrication prior to installation of equipment; and
- Completion of construction prior to workshop testing.

Works shall not proceed past these stages until the Superintendents Representative has been advised and inspections completed or written confirmation is received from the Superintendents Representative that an inspection is not required. Note that inspections shall not take place until adequate workshop drawings have been submitted - refer clause 22.

The switchboard shall be thoroughly tested at the contractor's workshop at the completion of construction works. The Superintendents Representative shall attend, to witness the workshop testing (or shall notify the contractor in writing that witness testing is not required). All equipment and personnel necessary for carrying out the tests shall be provided by the contractor. A schedule of proposed testing shall be submitted to the Superintendents Representative for approval seven (7) days prior to the date of workshop testing.

The Superintendents Representative shall be given seven (7) days' notice in writing of the need for inspections and testing. The cost of the Superintendents Representatives' attendance will be borne by the Principal except where return visits are necessary due to the failure of equipment on the initial visit. In these cases, the costs incurred would be deducted from monies owed to the contractor.

Workshop test shall include but not be limited to:

- All routine tests to relevant Australian Standards;
- Operational test of all devices including interlocks, PLC's (Field I/O shall be simulated during these tests);
- Insulation resistance (excluding electronic equipment); and
- Earth continuity.

Where called for in the job specification, Type Test assemblies shall be used and certificates shall be provided on request.

The passing of inspections and tests at the workshop shall not prejudice the right of the

Superintendents Representative to reject whole or part of the switchboard if it does not comply when erected on site.

After completion of site erection, the installation shall be thoroughly tested. The Superintendents Representative shall attend to witness the site testing (or shall notify the contractor in writing that witness testing is not required). All equipment and personnel necessary for carrying out the tests shall be provided by the contractor. A schedule of proposed testing shall be submitted to the Superintendents Representative for approval seven days prior to the date of workshop testing.

The Superintendents Representative shall be given seven (7) days' notice in writing of the need for inspections and testing. The cost of the Superintendents Representatives' attendance will be borne by the Principal except where return visits are necessary due to the failure of equipment on the initial visit. In these cases, the costs incurred would be deducted from monies owed to the contractor.

Site tests to include but not be limited to:

- Check tightness of all electrical connections;
- Electrical safety tests as per AS3000;
- Insulation Resistance (excluding electronic equipment);
- Earth continuity;
- Operational tests of all circuits and devices including interlocks and fault circuits; and
- Analogue signal calibration at five points on scale (rising & falling inputs).

Where the Principal is required to carry out programming of telemetry equipment or control system elements a minimum of 6 weeks written notification of the anticipated date of commissioning is to be given to WRC's Electrical Systems Engineer to allow works to be scheduled.

Where required by the job specification a thermoscan shall be carried out of the switchboard at the completion of commissioning and 2 weeks prior to the end of the defects liability period.

The results from all tests are to be recorded on approved forms and included in the Operating and Maintenance Manuals.

## 22 Drawings

Electrical schematics are to be prepared in accordance with AS 4383 and preferably be of horizontal orientation. Symbols are to be in accordance with AS 1102, designated as per AS 3702 and be complete with line number cross-references for coil and contacts. Cubicle construction drawings are to be prepared in accordance with AS 1101. Drawings are to include provision for Council document number. The drawings included in Appendix A can be used as a guide for the standard of drafting required.

Each component or item of equipment used in a project shall have a unique tag name and wire numbers. The use of a unique prefix in front of the tag name or wire number is acceptable for multi-cell MCC type switchboards.

Workshop drawings are to be submitted to the Superintendents Representative for review prior to construction. Workshop drawings are to include sufficient detail of switchboard components to allow design check including but not limited to:

- Design parameters for switchboard including ratings of mains, sub-circuits, motors etc;
- Make and model of key components, e.g. circuit breakers, contactors, motor starters, protective devices, isolators etc;
- Rating of power wiring / bus;

- Settings of protective devices; and
- Parameter settings for soft starters / VSD's.

The contractor shall allow a period of 14 days in their program for design review by Superintendents Representative. Construction of switchboard is not to proceed until design review has been completed.

After the completion of workshop construction/testing the drawings are to be revised to "As-built" status and a copy forwarded to the Superintendents Representative prior to commencement of site installation / commissioning. Once the site installation works are completed and commissioned the drawings shall be revised to "As-installed" status. Unless otherwise specified three copies of the as-installed drawings are required in addition to those included in the manuals described below. One set is to be laminated and be suitable for keeping in the switchboard cubicle on site.

In addition to the hard copies specified above the as-installed drawings shall also be supplied on CD-ROM as a vector file in \*.dwg format that can be edited in AutoCAD 2012. All x-refs, fonts, linetypes etc. used in the drawings shall be included on the disk. To assist with plotting of drawings \*.pcp files shall also be included.

(Note: Where the contract is for supply only of switchboard then the requirements for as-installed drawings shall apply to the as-built drawings.)

## 23 Manuals

Unless specified otherwise, three hard copies of an Operation and Maintenance Manual shall be provided. The manual shall be a hard covered plastic four ring binder and shall include as a minimum the following:

- Electrical schematics (enclosed in plastic envelopes);
- Equipment list detailing item designation, type, manufacturer, catalogue numbers, ratings and local supplier;
- Manufacturers literature all equipment supplied (in English language);
- Listing of all settings/set points for all protective and control devices including timers, relays etc.;
- Detailed, step by step, programming instructions for all devices;
- PLC documentation where applicable;
- Test results (workshop and site);
- Equipment warranties - in name of Principal;
- Circuit design data including breaker selection, cable sizing etc.;
- Electrical installation test results; and
- Maintenance instructions for all equipment including a schedule for when maintenance tasks are to be carried out.

Draft Operation and Maintenance (O&M) Manuals are to be submitted to the Superintendents Representative for approval six (6) weeks prior to commissioning. Within two (2) weeks of commissioning, the manuals are to be revised to as-constructed status and submitted for final approval. Practical Completion will not be granted until approved Operation and Maintenance Manuals have been received by the Superintendents Representative.

In addition to the hard copies specified above, one digital copy of the Operation and Maintenance Manual shall also be provided. The digital copy shall be supplied on CD-ROM and consist of pdf files, word documents, excel files etc. that can be opened with standard software programs such as Adobe Reader and Microsoft Office.

## 24 Certification by RPEQ

Where required by the job specification the whole of the electrical installation shall be inspected and certified by a Registered Professional Engineer (Queensland).

Unless otherwise specified the certification is to confirm:

- Compliance with the Electrical Safety Act;
- Compliance with applicable Australian Standards;
- Compliance with the contract documentation;
- Correct function of all circuits and equipment; and
- Suitability of installation test results and settings of protective devices.

It is recommended that a staged approach be used for RPEQ certification including:

- Review of workshop drawings and design information;
- Inspection of switchboard prior to delivery to site; and
- Site inspection and test review prior to final commissioning.

The RPEQ certification report is to be submitted to the Superintendents Representative prior to final commissioning and a copy included in the Operation & Maintenance Manuals.

Note that regardless of the requirement in the job specification, RPEQ certification may be required for other elements of the works to comply with Codes of Practice, Supply Authority requirements etc.

## 25 Preferred Suppliers

Appendix B contains a list of preferred equipment suppliers. This listing is provided to ensure that equipment supplied will be compatible with our existing plant and to minimise our stock holding of spare parts.

All equipment supplied should be available from Mackay suppliers who maintain stock so that replacement parts can be obtained at short notice in an emergency situation.

## 26 Spare Parts

Unless otherwise specified in the job specification the following spare parts shall be supplied with the switchboard as a minimum requirement:

- One contactor (complete assembly) of each size and voltage rating used;
- 4 off Thermistor relay;
- 1 off thermal overload relay;
- 2 off phase failure relay;
- 1 off seal failure relay;
- Six off control relay of each type and voltage rating used (including base);
- One timer of each type and voltage rating used (including base);
- Ten spare indicator lamps of each type / colour and voltage rating used, for LED indicators only four of each colour and voltage are required; and
- Six spare fuse cartridges of each type and rating used (including semi-conductive fuses).

## 27 Warranties

All equipment warranties, registrations etc. shall be made out in the name of the Principal and submitted in accordance with the supplier's instructions. Copies of all documents are to be included in the manuals.

## **28 Installation Considerations**

This section is not a complete installation specification. It serves only to highlight certain issues that require consideration or have been recurring problems with recent contracts.

### **28.1 Electrical Installation**

#### **28.1.1 Electrical Work**

All electrical work shall be performed by qualified electrical workers holding an appropriate certification / licence issued by the Electrical Safety Office, Queensland.

The person or firm responsible for the electrical work shall hold an Electrical Contractors Licence issued by the Electrical Safety Office, Queensland.

#### **28.1.2 Design Information**

The contractor is to supply full design information in regard to the electrical installation. This is to include but not limited to:

- Site power supply calculations including maximum demand and fault level;
- Cable calculations for all cables including current carrying capacity, voltage drop, short circuit and earth fault loop impedance. Spare cable capacity is also to be noted;
- Cable schedule showing size, type, route length, installation method, design load; and
- Circuit breaker selection data including cascade, discrimination, trip times, settings.

This information is to be supplied to the Superintendents Representative for review 2 weeks before the commencement of works / placement of orders.

#### **28.1.3 Electricity Supply**

Unless specifically excluded in the job specification the contractor is prepare the application for electricity supply, lodge the application with the supply authority and pay all associated fees. WRC will sign the form as required.

The point of supply can be either a URD type pillar or a property pole as required to meet supply authority requirements and/or site flood levels. If a property pole is used it must be positioned so that aerial cables are not installed across entrance roads, pump wells or vehicle working areas. Property poles and installation is to be certified by an RPEQ in accordance with Ergon requirements.

Where riser brackets are utilised they are to be certified by an RPEQ in accordance with Ergon requirements.

Where underground conduits are installed for Ergon's use, their position is to be accurately marked up on a site plan and certified by an RPEQ.

#### **28.1.4 Consumer Mains**

Consumer mains are to be designed with a minimum of 30% spare capacity over and above the calculated site maximum demand.

Consumer mains are to be installed underground to the point of supply. Under no circumstances are aerial cables to be installed across entrance roads, pump wells or vehicle working areas.

#### **28.1.5 Main Earth**

The main earth is to be installed in an accessible position and be protected from damage by mowers, line trimmers and the like. The protection must provide adequate room to allow disconnection of the earth for testing purposes. A commercial earth pit is preferred. The earth stake is not to be installed in a location where it is likely to become embedded within a

concrete slab, bitumen or landscaping.

#### **28.1.6 Switchboard Location**

When a switchboard is to be located adjacent to a pumpwell / valve chamber it is to be installed so that the switchboard doors open away from any hatch openings. Access to the switchboard is not to be impeded by mechanical equipment, safety rails (which may not be a permanent installation), landscaping etc. A suitable concrete slab is to be provided in front of the switchboard as a work area for electricians when working on the switchboard. Often this slab is added after completion of installation works – refer to Clause 27.1.4 regarding earth stake location. The area in front of the switchboard is to be at one level – no step.

#### **28.1.7 Conduits**

Conduits are to be of an adequate size to suit the installation requirements. Particular attention is to be paid when sizing conduits between a switchboard and a pumpwell. If the pump cables are to be fitted with plugs, then conduit must be large enough to permit the passage of the plug top with all other cabling installed. The use of bends must be kept to an absolute minimum. All bends must be long radius type.

At sewerage pumpstations 2 off 25mm conduits are to be installed from the switchboard to the base of the vent pole. One conduit may be used for lighting or antenna cabling. The other conduit will be for a future security camera (to be installed by Council).

A non-corrodible draw wire is to be left in all conduits.

The ends of all conduits are to be sealed to prevent ingress of dirt, debris or vermin. Special attention is required for conduits going to a sewerage pumpwell to prevent ingress of sewerage gases into switchboard.

#### **28.1.8 Underground Cable Routes**

The routes of all underground cables (including the consumer mains) are to be accurately marked up on a site plan, complete with dimensions from permanent landmarks / features. A laminated copy of this plan is to be left in the switchboard and other copies included in the O&M manuals.

#### **28.1.9 Submersible Pump Cables**

Cables for submersible pumps are to be suspended in the pumpwell from SS hooks adjacent the hatch opening. Excess cable is to be neatly coiled (taking due notice of minimum bending radii of the cable) and tied to these hooks.

#### **28.1.10 Level Sensor Installation**

Level sensors are to be suspended in the pumpwell from SS hooks adjacent the hatch opening. Excess cable is to be neatly coiled (taking due notice of minimum bending radii of the cable) and tied to these hooks. It shall be possible to remove the level sensor from the pumpwell without any need to enter the well. Float switches are not to be installed in small diameter conduits fixed to the pump guide rails.

When installing the level sensors, measures must be taken to ensure that level sensors remain suspended vertically and are not affected by any turbulence within the pumpwell. The preferred method is to fix a smooth weight to a stainless steel cable and suspend this from a SS hook adjacent the hatch opening. The level sensor cable can then be tied to the stainless steel cable and lowered into the well. The whole assembly can be withdrawn from above the hatch opening. A large diameter stilling tube can also be employed however in sewerage wells these can become a trap for rags etc. and should be avoided except in extreme cases.

All level sensors shall be wired from an ELV power supply.

### 28.1.11 Documented Electrical Test results

At the completion of electrical installation works all circuits are to be tested for safe operation in accordance with the Electrical Safety Act and the requirements of this specification. The test instrument readings and results are to be recorded and documented in a report to be delivered to WRC's Electrical Technical Officer. The report is to include the electrical contractors licence number and be signed by the contractor.

The testing required will include but not be limited to:

- Earth continuity;
- Insulation resistance;
- Polarity;
- Earth fault loop impedance;
- RCD trip times; and
- Correct circuit connections.

Practical completion will not be granted until the documented test results are received by WRC's Electrical Technical Officer.

## 28.2 Telemetry Installation

### 28.2.1 Radio Path Survey

When telemetry equipment is to be installed the contractor shall be required to undertake a radio path survey to verify the suitability of the signal path and determine the requirements for antenna selection and masting. The radio path would be a line of sight from the facility location to one of the radio repeaters in WRC's existing network. Contact WRC's Electrical Systems Engineer to determine which radio repeater site is to be utilised.

An acceptable radio path would have a minimum fade margin of 25dB (with ALL attenuation and losses included). The Received Signal Strength Indication at the site is to be greater than -70dBm. If the signal is marginal it may be possible to improve the signal through the use of a higher gain antenna or increased antenna mast height. If an acceptable signal path cannot be established to the site, then the contractor must provide an acceptable alternative or contribute to the establishment of a new repeater site.

### 28.2.2 Antenna Installation

Typically, a 6dB Yagi type antenna is used at our telemetry sites. The Yagi type antenna is to be mounted with horizontal polarisation on a bracket that can swivel through 180° to allow correct alignment. Higher gain antenna may be required at some sites and additional consideration must be given to their mounting requirements as they are physically larger and have a higher wind loading.

Masting requirements will vary from site to site. In some cases, small goose-neck type brackets will suffice while others will require pole type masts. Where pole type masts are employed, structural certification from a registered RPEQ will be required in terms of footings, wind loadings etc.

Generally, antenna masts and fittings will be constructed from hot dipped galvanised materials. In coastal or corrosive environments stainless steel materials will be required (including SS antenna).

When designing masts and antenna mounts consideration is to be given to access by maintenance personnel. Where antenna cannot be safely reached from a step ladder then the design must incorporate a means of lowering the mast to a safe working level (without

exceeding the minimum bending radius of the antenna cable). The need of specialised access equipment such as EPV's should be avoided.

Consideration must also be given to vandalism. It shall not be possible for vandals to easily reach antenna or climb on masts. In some cases, the use of a concealed "whip" type antenna might present a viable solution.

### **28.2.3 Antenna Cable**

Where the route length of antenna cables is less than 15m, RG213 coax is to be used to connect the antenna to the radio. If the route length exceeds this then a higher specification coax, such as LDF-4, shall be used. The contractor is to submit calculations demonstrating correct cable selection in terms of signal strength and dB loss.

All antenna cable connections are to be made by N type or similar connectors. The connectors shall be sealed to prevent ingress of moisture, e.g. 3M Scotch rubber tape or similar.

A suitable surge diverter is to be installed on the antenna cable to minimise the effects of lightning on the radio equipment.

### **28.2.4 Additional Notes**

Refer to Appendix B2 for additional notes in relation to the supply and installation of telemetry equipment.

### **28.2.5 Commissioning**

WRC's Electrical Systems Engineer is to be given a minimum of six (6) weeks written of the anticipated date of commissioning to allow the works to be scheduled.

## Appendix C - Typical Telemetry I/O

### Sewerage Pumpstation – I/O States

The On/Off states of telemetry I/O shall have the following meaning:

| I/O Description           | ON State                   | OFF State                     |
|---------------------------|----------------------------|-------------------------------|
| AC power fail             | Bus supply healthy         | Bus supply failed             |
| Intruder switch           | Door closed                | Door opened                   |
| Wet well level high       | Well level normal          | Well level high               |
| Station system mode       | System mode selected       | Not in system mode            |
| Station local manual mode | Local manual mode selected | Not in local manual mode      |
| Station local auto mode   | Local auto mode selected   | Not in local auto mode        |
| Pump run                  | Pump is operating          | Pump is off                   |
| Pump healthy              | Pump protection is healthy | Pump protection has tripped   |
| Pump available            | Pump is available          | Pump is not available         |
| Generator running         | Generator set is operating | Generator set is off          |
| Generator fault           | Generator healthy          | Generator faulted             |
| Generator failed to start | Generator normal           | Generator failed to start     |
| Generator low battery     | Battery voltage normal     | Battery voltage is low        |
| Generator low fuel        | Fuel level normal          | Fuel level is low             |
| Ergon Supply Status       | Mains supply healthy       | Mains supply failure          |
| ATS Ergon supply          | ATS in mains position      | ATS not in mains position     |
| ATS Generator supply      | ATS in generator position  | ATS not in generator position |
| Generator Circuit Breaker | Generator CB closed        | Generator CB open             |
| Load bank healthy         | Load bank OK               | Load bank faulted             |

Note: I/O functionality is not to be changed without written approval from WRC's Electrical Systems Engineer.

### Appendix D – Abbreviations Listing

The table below contains a listing of the abbreviations used in this document.

|       |                                               |
|-------|-----------------------------------------------|
| AC    | Alternating Current                           |
| ADWF  | Average Dry Weather Flow                      |
| AI    | Analogue Input                                |
| AO    | Analogue Output                               |
| CB    | Circuit Breaker                               |
| CFS   | Combination Fuse Switch                       |
| CT    | Current Transformer                           |
| DC    | Direct Current                                |
| DI    | Digital Input                                 |
| DO    | Digital Output                                |
| DOL   | Direct On-Line                                |
| ELV   | Extra Low Voltage                             |
| EMC   | Electromagnetic Compatibility                 |
| GPO   | General Purpose Outlet                        |
| HMI   | Human Machine Interface                       |
| HRC   | High Rupture Capacity                         |
| I/O   | Input / Output                                |
| LED   | Light Emitting Diode                          |
| MOV   | Metal Oxide Varistor                          |
| MPR   | Motor Protection Relay                        |
| N/C   | Normally Closed Contact                       |
| N/O   | Normally Open Contact                         |
| PCB   | Printed Circuit Board                         |
| PFR   | Phase fail relay                              |
| PLC   | Programmable Logic Controller                 |
| PV    | Process Variable                              |
| PVC   | Polyvinyl Chloride                            |
| RCD   | Residual Current Device                       |
| RPEQ  | Registered Professional Engineer (Queensland) |
| RTU   | Remote Terminal Unit                          |
| SCADA | Supervisory Control and Data Acquisition      |
| SPD   | Surge Protection Device                       |
| SRF   | Surge Reduction Filter                        |
| WRC   | Whitsunday Regional Council                   |
| TOL   | Thermal Overload                              |
| VSD   | Variable Speed Drive                          |

WR24 – Revision 3  
Standard Specification for Electrical Switchboards

### Appendix E - Revision Record

| Number | Date     | Clauses Altered                                                                                                                                                                                            |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12     | 30.11.09 | New clauses added - 9.29, 19.6, 24, 28.1.0, 28.1.1, App E, subsequent clauses renumbered.<br>Revised clauses – 1, 3, 4, 8, 9, 10, 11, 12, 14, 15, 16, 17, 18, 20, 21, 22, 23, 26, 28, App A, App B, App C, |
| 12.1   | 21.01.10 | Minor revisions, Appendix D added, subsequent clauses renumbered                                                                                                                                           |
| 13     | 07.02.13 | Major revision, alterations to most clauses and appendices                                                                                                                                                 |

### Appendix F – Summary of Document Submissions and Inspections

The following table is intended to summarise the requirements for submission of documentation through the switchboard project and tie in to inspections and progression of milestone dates.

| Milestone                        | Document/Inspection                                                                                                                                                                                                                                                                                                                                                                                                           | Clause                                                    | Comment                                                                                                                               |

\* Refer to contract document for submission dates.

**Appendix G – Job Specification Checklist**

1. Check operating conditions. Specify location (Indoor / Outdoor) \_\_\_\_\_
2. Specify Fault Level \_\_\_\_\_
3. Specify requirement for Supply Authority metering inc. tariff \_\_\_\_\_
4. Specify degree of segregation (i.e. Form 1, Form 2 etc.) \_\_\_\_\_
5. Specify how cubicle is to be mounted (i.e. pole, wall or plinth) \_\_\_\_\_
6. Specify material for cubicle, mounting pans & escutcheon door \_\_\_\_\_
7. Specify type of door handles and method of locking \_\_\_\_\_
8. Specify sunhood (if required) \_\_\_\_\_
9. Specify paint colours (if applicable) \_\_\_\_\_
10. Specify size and configuration of mains cables <sup>1</sup> \_\_\_\_\_
11. Specify lightning and surge protection requirements \_\_\_\_\_
12. Detail all electrical equipment that is to be connected  
- include current ratings of circuits, kW ratings of motors etc. \_\_\_\_\_
13. Specify how motors are to be controlled <sup>1</sup> \_\_\_\_\_
14. Specify requirements for motor starters and protection <sup>1</sup> \_\_\_\_\_
15. Detail any special control or instrumentation requirements <sup>1</sup> \_\_\_\_\_
16. Specify if telemetry is required and detail all required I/O signals \_\_\_\_\_
17. Specify telemetry installation requirements \_\_\_\_\_
18. Specify requirements for PLC (if applicable) <sup>1</sup> \_\_\_\_\_
19. Specify any other requirements (e.g. alarms, generator etc.) \_\_\_\_\_
20. Review preferred suppliers list and make alterations if necessary \_\_\_\_\_
21. Specify requirements for inspection and testing \_\_\_\_\_
22. Specify delivery address and time \_\_\_\_\_
23. Specify if RPEQ certification is required \_\_\_\_\_

<sup>1</sup> The design of these items may be the contractor's responsibility.  
Refer to main project specification.

## Appendix H1 - Technical Data Sheets

### Switchboard and Equipment

The technical data sheets will detail the proposed switchboard equipment. The tenderer shall complete all sheets and submit with his tender/quotation.

## Tables 1 – 5 for the Whitsunday Regional Council Planning Scheme – Major Amendment 2021 – State Interest Review

The Department of State Development, Infrastructure, Local Government and Planning has undertaken its assessment of the proposed Whitsunday Regional Council Planning Scheme – Major Amendment 2021. As a result of this assessment the following items in Table 1 - 5 are required to be actioned.

State Interests requiring no further action (**subject to any finalised mapping and further justification of zone changes for land parcels**): Liveable communities, Development and construction, Emissions and hazardous activities, Energy and water supply, Infrastructure integration, Strategic airports and aviation facilities and Strategic ports.

State Interests considered in this document for Council action or consideration: Housing supply and diversity, Agriculture, Mining and Extractive Resources, Tourism, Biodiversity, Coastal Environment, Cultural Heritage and Water Quality, Natural hazards, risk and resilience and Transport infrastructure.

**Table 1:** Regulated requirements prescribed in the Planning Regulation

| State Interest         | No. | Planning scheme reference                                                                  | Policy/Relevant legislation               | Recommended Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Reasons for recommendation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Whitsunday Regional Council action/response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Regulated requirements | 1.  | Zone Names Part 1<br>1.2 Table 1.2.1                                                       | Section 6 of the Planning Regulation 2017 | Review the scheme to ensure the correct terms are consistently applied throughout the scheme. Specifically amend typographical errors: <ul style="list-style-type: none"> <li>From <i>Waterfront industry zone</i> to <i>Waterfront and marine industry zone</i> as per regulated requirements; and</li> <li>From <i>zone code</i> to <b>zone</b> as per the regulated requirements.</li> </ul>                                                                                                                                                                                                                                                                        | The list of Zones in table 1.2.1 in part 1 of the scheme contains some typographical errors that requires correction.<br>Table 1.2.1 refers to zone codes should just be zone. This looks to be a legacy from when the scheme was first approved.                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Noted, this will be amended.</b><br>We will endeavour to ensure consistency throughout the Planning Scheme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|                        | 2.  | Accepted Development Requirements – Ancillary activities Part 5<br>Table 5.5.16 Rural zone | Planning Regulation 2017                  | Food and Drink outlet and Shop are accepted development where ‘ancillary’ to rural activity, Environmental Facility or Nature Based Tourism. The scheme often has a use as accepted subject to complying with AO’s in a code. This would not be in accordance with good drafting principles but this is a pre-existing situation for the most part.<br>It is considered that the use of ‘ancillary’ is not appropriate for determining category of assessment in that it lacks sufficient clarity and certainty. It is considered that the category of assessment should be reconsidered to include more definitive parameters around the acceptability of these uses. | The table of assessment for the Rural zone (table 5.5.16) lists a Food and Drink Outlet and Shop as accepted development where ancillary to Rural Activity, Environmental Facility and Nature Based Tourism.<br>It is noted that AO1.1 of the Rural Tourism code refers to a maximum of 150m <sup>2</sup> of TUA for a food and drink outlet or shop. It is noted that that this threshold could be adopted in the TOA where associated with another use instead of referring to ‘ancillary’.<br>In the event that ancillary is still used to determine level of assessment further guidance should be prepared to interpret how to apply this.                                                            | <b>No change proposed.</b><br>We consider ‘ancillary’ defined by Oxford Dictionary as, “subordinate, subservient”, as sufficient to determine the level of assessment. We are reluctant to apply only the GFA as the definitive factor in assessment as promoting commercial uses not associated with a Rural activity or tourism use in Rural areas is not the intent of the Rural tourism code.                                                                                                                                                                                                                                                                                                         |
|                        | 3.  | Schedule 1- Definitions – SC1.2 Administrative terms                                       | Planning Regulation 2017                  | The scheme seeks to adopt the following administrative terms which either have similar meaning in the regulation or are elsewhere defined in legislation: <ul style="list-style-type: none"> <li>Average building height</li> <li>Engineering work</li> <li>Essential service uses</li> <li>Future State Transport Corridor</li> <li>Isolated Areas</li> <li>Non-tidal artificial waterway</li> <li>Short Term Accommodation (Dwelling)</li> <li>Social Housing</li> <li>Solar Panel Farm</li> <li>Stream order</li> <li>Vulnerable Uses</li> </ul>                                                                                                                    | Section 8 of the Regulation states that a planning scheme may include additional administrative terms contained in schedule 4 of the Regulation, but only if the term and definition used is consistent with and does not change the effect of the administrative terms and their definitions in the Regulation.<br>There are also a number of new administrative terms which are proposed to be introduced through the amendment which may change the effect of administrative terms and therefore definitions in the regulation OR replicate terms which are elsewhere defined. There has been little to no explanation given as to the reason for the inclusion of these administrative terms and hence | <b>No changes proposed.</b><br><br>The <i>average building height</i> definition is required to support the building height overlay in determining an appropriate level of assessment for development on extreme slopes. Without this administrative definition, development of dwellings on established residential lots on steep slopes cannot occur ‘as-of-right’, instead triggering more red tape in impact assessment. Building height precincts for these areas were considered a less desirable solution.<br><br><i>Engineering work</i> – this form of operational works is not defined by the Regulation. It was created to ensure greater clarity on when this form of development is applied. |

|----|-------------------------------------------------------------------|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|    |                                                                   |                                      | It is noted that where a term is elsewhere defined (for example in the Planning Act, Regulation or State Planning Policy) it is recommended that this is not replicated in the administrative definitions on the basis that any change to these terms would result in inconsistency with the administrative terms as noted in the scheme. | further explanation is requestion from Council as to these matters.                                                                                                                                           | <p><i>Short-term accommodation (Dwelling)</i> – Created in-leu of no current policy direction from DSDILGP to date on holiday house style uses. Definition is necessary to support Council’s controls on short-term accommodation within a dwelling, which requires different assessment benchmarks to a traditional Short-term accommodation development. The definition and associated benchmarks aim to offset common residential impacts associated with short-term accommodation in a house.</p> <p><i>Solar panel farm</i> – This definition was created as Council wanted to provide streamline assessment for <i>renewable energy facilities</i> that are <i>solar panel farms</i>, excluding other forms of solar farms that may include thermal energy arrays.</p> <p><i>Essential service uses, Future transport corridor, Isolated areas, Non-tidal artificial waterway, Social housing, Stream order and Vulnerable uses</i> – these definitions have been copied from the Regulation or SPP for ease of use in the Planning Scheme and are appropriately referenced to the source.</p> |
| 4. | Definitions – administrative terms                                | Planning Regulation 2017             | The scheme seeks to introduce a new administrative definition new use being <u>Short Term Accommodation (dwelling)</u> . Provide further clarification around its intended application for the scheme.                                                                                                                                    | It is unclear what is trying to be achieved by the inclusion of this term.                                                                                                                                    | <p><b>No changes proposed.</b></p> <p><i>Short-term accommodation (Dwelling)</i> – Created in-leu of no current policy direction from DSDILGP to date on holiday house style uses. Definition is necessary to support Council’s controls on short-term accommodation within a dwelling, which requires different assessment benchmarks to a traditional Short-term accommodation development. The definition and associated benchmarks aim to offset common residential impacts associated with short-term accommodation in a house.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 5. | Definitions – administrative terms                                | Planning Regulation 2017             | The amendment also seeks to include a new administrative definition for ‘average building height’. Provide further justification, (include examples of scenario testing) which supports why the new ‘average building height’ definition is required.                                                                                     | Rather than creating a whole new definition, it is preferable that the current building height definition only is used and that the code be amended to make allowance for those sites with significant slope. | <p><b>No change proposed.</b></p> <p><i>Average building height</i> – Required to support the building height overlay in determining an appropriate level of assessment for development on extreme slopes. Without this administrative definition, development of dwellings on lots approved on extreme slopes cannot occur ‘as-of-right’, instead triggering more red tape in Impact assessment. Building height precincts for these areas were considered a more complicated and messy solution. The methodology was adapted from the Summit Preliminary Approval in Airlie Beach and scenario testing was undertaken for sites related to the development.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 6. | Schedule 1 Definitions – Administrative Definitions Table SC1.2.2 | Regulated Requirements               | Reconsider administrative definition coastal environment work                                                                                                                                                                                                                                                                             | Definitions can only be added if it is not defined in other legislation.                                                                                                                                      | <p><b>Noted, this will be amended.</b></p> <p>Council will alter the definition in Schedule 1 and terminology in the code to be in alignment with SPP 2017 – <i>Coastal protection work means any permanent or periodic work undertaken primarily to manage the impacts of coastal erosion or storm tide inundation, including altering physical coastal processes such as sediment transport. Coastal protection work includes erosion control structures.</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 7. | Schedule 1 Definitions – Administrative Definitions Table SC1.2.2 | Regulated Requirements / Workability | Reconsider administrative definition coastal hazard area                                                                                                                                                                                                                                                                                  | Definitions can only be added if it is not defined in other legislation.                                                                                                                                      | <p><b>Noted, this will be amended.</b></p> <p>The <i>coastal hazard area</i> administration definition relates to the Coastal Hazard Overlay Map and is not defined by other legislation. Admin definition is required to appropriately explain the Coastal hazard overlay for storm tide and erosion and will be altered to include additional overlays as required by State.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|                                  |     |                                                                    |                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                                  | 8.  | Sched 1 Definitions<br>Administrative definitions<br>Table SC1.2.2 | Section 31(4) of the Building Act 1975<br>Section 8(5) of the Planning Act 2016<br>ABCB | Review administrative definitions for natural hazard matters to ensure alignment with terminology used throughout the scheme and for building provisions. Examples- Flood hazard area and Flood hazard Level (FHL)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The administrative definitions must align with Schedule 4 of the Planning Regulation and building provisions.                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Noted, this will be amended where conflicts occur.</b><br>Council have adapted some definitions for clarity, not creating conflicts. We don't consider this to be an issue. For example:<br><br><i>Flood hazard area</i><br><i>Planning Regulation</i> - means a flood hazard area designated by a local government under the Building Regulation, section 13(1)(a).<br><br><i>National Construction Code</i> – means the site (whether or not mapped) encompassing land lower than the flood hazard level which has been determined by the appropriate authority.<br><br><i>Planning Scheme</i> – An area that is identified as a flood hazard area on the Flood hazard overlay map.                                                                                                                                                                                                            |
| <b>Workability and structure</b> | 9.  | Coastal Hazard overlay provisions                                  | Scheme approach and Structure                                                           | Provide additional commentary on how provisions of the coastal hazard overlay code provisions are aligned with LUS 3.2.4.2 of the scheme which requires that “risks to people and property are minimised in areas within or adjacent to natural hazard”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Further commentary required to demonstrate alignment of strategic framework and Amended coastal hazard overlay provisions.<br>The amended coastal hazard overlay provisions are permissive of new development and re-development where in the erosion prone area.                                                                                                                                                                                                                                                                             | <b>No change proposed.</b><br>Coastal hazard overlay provisions for erosion prone areas are only permissive of dwelling houses in urban zoned land, where risk is minimized by siting benchmarks. To remove this provision would remove the as-of-right development rights of several Low density residential zoned lots at Gloucester, Conway and Wilsons Beach, effectively rendering these blocks useless, financially damaging owners and creating significant political reputational impacts.<br><br>This strategy aligns with LUS3.2.4.2 (1) which states - Risks to people and property are <u>minimised</u> .                                                                                                                                                                                                                                                                               |
|                                  | 10. | Level of assessment determinations                                 | Scheme approach and Structure                                                           | The intent to facilitate innovative land uses through reductions in the level of assessment for uses in some zones is supported in principle but the scheme provisions may need some adjustment. In particular, where a level of assessment determination hinges upon whether a proposed use is “ancillary”.<br>Provide further clarification how these provisions are intended to operate. It is not clear how an applicant would make a determination about whether a proposed activity is ‘ancillary’ for the purpose of determining level of assessment.<br>It is noted that AO1.1 of the Rural Tourism code refers to a maximum of 150m <sup>2</sup> of TUA for a food and drink outlet or shop. It is recommended that this threshold be adopted in the table of assessment instead of referring to ‘ancillary’. | Further commentary required to demonstrate alignment of strategic intent with scheme structure.                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>No change proposed.</b><br>We consider ‘ancillary’ defined by Oxford Dictionary as, “subordinate, subservient”, as sufficient to clearly determine the level of assessment that does not involve technical issues that would require a level of professional expertise to decide. We are reluctant to apply only the GFA as the definitive factor in assessment as promoting commercial uses not associated with a Rural activity or tourism use in Rural areas is not the intent of the Rural tourism code.<br><br><b>Change proposed</b><br>In the instance of micro-breweries and coffee roasting being ancillary to a Food and drink outlet in the TOA. This is proposed to be amended to <i>associated with a Food and drink outlet, Bar or Hotel</i> , as ‘ancillary’ (being subordinate) is not the intent and Bar and Hotel uses are also likely to co-exist with these innovative uses. |

The definition and associated benchmarks aim to offset common residential impacts associated with short-term accommodation in a house.</p> <p>Defining what is acceptable limits of operation in the admin use definition and within assessment benchmarks, allows Council to differentiate between Party houses (prohibited) and Short-term accommodation (Dwelling) to assist in shutting down a use where significant complaints are received.</p>                                                                                                |
| 12. | The Planning Scheme                                                         | Scheme approach and Structure-Clarity and transparency in the plan making process | Clarify if any scenario testing has been undertaken to test how these provisions would function. If no testing of these provisions has taken place it is recommended that this be done to test the rigor of these provisions.                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Strategic Planning developed amendments in conjunction with the Development assessment team and undertook testing to ensure proposed amendments are functional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 13. | Code provisions and level of assessment-Short-term accommodation (dwelling) | SPP Guiding principle – Outcome focused and positive                              | Council to amend or remove operational focused assessment benchmarks and specific outcomes and consider level of assessment.                                                                                                                                                                                                                                            | <p>The proposed code provisions around “Short Term Accommodation (dwelling)” are more regulating operational matters relating to ongoing use of the premises, rather than whether the land use is appropriate. It is considered that most of these provisions are not related to land use and are more regulating potential behavioural issues that may or may not result from the land use and would be better addressed through existing regulation, local laws or similar.</p> <p>In many circumstances, “Short Term Accommodation (dwelling)” is impact assessable. The rationale for this level of assessment should be explained and consideration given to lowering this level of assessment.</p> | <p><b>No change proposed.</b><br/>Assessment benchmarks for Short-term accommodation (Dwelling) seek to define what is acceptable limits of operation for the use, before it may be defined as a Party house (prohibited). We consider limiting the intensity of a land use within the realms of Planning and are more appropriately defined up front rather at application stage than shifting the onus to other areas such as local laws.</p> <p>Short-term accommodation (Dwelling) can have residential amenity impacts; therefore, it is important to Council that the community has an opportunity to make comment on applications within certain zones, through the impact assessment process.</p> |
| 14. | Ancillary use                                                               | SPP Guiding Principle – Integrated                                                | Some clear guidance about what is and what isn’t “ancillary” is required if it is determinative of level of assessment.                                                                                                                                                                                                                                                 | <p>Identify the assessment process for ancillary uses and clarify how ‘ancillary’ is determined. Specifically, microbrewery and coffee roasting in Centre zones clarify how is a determination made as to whether they are an “ancillary” use. Must be ancillary to food and drink outlet, but typically a microbrewery would be associated with a bar or hotel use. Consider expanding these provisions where for a hotel or bar.</p>                                                                                                                                                                                                                                                                   | <p><b>No change proposed.</b><br/>We consider ‘ancillary’ defined by Oxford Dictionary as, “subordinate, subservient”, as sufficient to clearly determine the level of assessment that does not involve technical issues that would require a level of professional expertise to decide.</p> <p><b>Change proposed</b><br/>In the instance of micro-breweries and coffee roasting being ancillary to a Food and drink outlet in the TOA. This is proposed to be amended to <i>associated with a Food and drink outlet, Bar or Hotel</i>, as ‘ancillary’ (being subordinate) is not the intent and Bar and Hotel uses are also likely to co-exist with these innovative uses.</p>                          |
| 15. | The Planning Scheme                                                         | SPP Guiding Principle – Integrated                                                | <p>The table of assessment for the Building Height Overlay identifies that there is no change to the table of assessment where proposing a Material Change of Use and where complying with the Acceptable Outcomes of table 8.2.5.3.1 of the overlay code.</p> <p>The table then sets out the building heights must comply with limits identified either within the</p> | <p>Is it clear/easy is it to understand the intended outcome for a piece of land?<br/>The interaction between the building height overlay and local plans is unclear and may be an issue.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p><b>No change proposed.</b><br/>We consider having all building height triggers for impact assessment in the building heights overlay as the simplest way to define the change in assessment, whether inside or outside of a local plan area. Section 5.3.2 clearly defines the method for determining the category of assessment.</p>                                                                                                                                                                                                                                                                                                                                                                  |

|     |                     |                                      |                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |

|     |                     |                                      |                                                                                                                                                                                                                                             | code itself or as identified within the within the relevant local plan maps.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 16. | The Planning Scheme | SPPP Guiding Principle – Efficient   | Provide further guidance around why the level of assessment defaults to impact rather than code assessable for some accepted development (subject to requirements). Why is this reasonable in this instance?                                | Clarification on where accepted development becomes assessable development is being sought, particularly for dwelling houses, where not complying the AO for domestic outbuilding size (AO1.2 of the 9.3.5 Dwelling house code), level of assessment goes from accepted to impact assessable. The same provision applies for dual occupancy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>No change proposed.</b><br>We acknowledge that this is an undesirable change in category of assessment, however, the political nature of managing shed sizes in the Region is important to Council and the community. Ultimately, there is reluctance to approve large sheds unless neighbours have an opportunity to make comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 17. | The Planning Scheme | SPPP Guiding Principle – Accountable | Consider revising the code provision relating the Short-term Accommodation (dwelling) to limit the code requirements to land use rather than operational matters which are better suited to other forms of non-planning related regulation. | Plans should only seek to regulate land use and planning outcomes.<br>It is considered that a number of the provisions that relate to Short Term Accommodation (dwelling) with the Short Term Accommodation an Multi unit use code are not necessarily that related to land use but are day to day operational matters that are better suited to existing regulation, local laws / a code of conduct / by-laws or similar. Such matters include: <ul style="list-style-type: none"> <li>• Limiting the number of occupants per bedroom</li> <li>• Limiting congregation around entrance of premises</li> <li>• Regulating adult entertainment on the premises</li> <li>• Establishing a code of conduct for each individual premises (if anything a standard code of conduct should be developed by the council which would apply to all such uses).</li> </ul> | <b>No change proposed.</b><br>Assessment benchmarks for Short-term accommodation (Dwelling) seek to define operational and design responses that mitigate common land use complaints about the use in residential areas. These outcomes define the management framework of the use to assist in compliance and what is acceptable limits of operation for the use before it may be defined as a Party house (prohibited). We consider limiting the intensity of a land use and defining a management framework of a use within the realms of Town Planning that are more appropriately defined up front at application stage rather than shifting the onus to local laws. Shifting regulation and compliance to local laws/by-laws/a code of conduct is not feasible from a resourcing perspective. See attached <a href="#">application guideline</a> for more information. |  |

Table 2: Section 8(5) of the Planning Act 2016

|                   | No. | Planning scheme reference                                                                       | Policy/Relevant legislation                                                                                                                                                                                                                        | Recommended Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Reasons for recommendation                                                                                                                                                                                                                                                                                                                                                                                                                                           | Whitsunday Regional Council action/response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

Whilst NCC and AS3959 prevail over the Planning Scheme as per S31 of the Building Act where overlap, not clarifying the key requirements in the Planning Scheme or State model code, such as minimum firefighting water supply (no BAP overlap) and firefighting connection types (AS3959) lacks transparency to the general community as BAPs require significant technical knowledge to translate.</p> <p>State has requested we remove firefighting water supply and operational firefighting requirements, but it is unclear in the <a href="#">Bushfire Resilient Building Guidance for Queensland Homes</a>, NCC or AS3959 what is the recommended minimum firefighting supply where not connected to reticulated water. Council developed this benchmark regarding required firefighting water supply and firefighting access in accordance with <i>Queensland Fire and Emergency Services – Planning for Bushfire Resilient Communities 2019</i> and will retain it in the interest of community resilience and to align with <i>Integrating state interests in a planning scheme – Bushfire - 13.1.4.1 (14)</i>.</p> |
| 7. | Bushfire Hazard Overlay Code Table 8.2.6.3.2 AO1.1        | AS2419 2005, Part 1, Section 5<br>NCC Volume 1<br>E1.3 Fire hydrants<br>Section 31(4) of the Building Act 1975<br>Section 8(5) of the Planning Act 2016 | Amend AO1.1 (a) (i) and (ii) and (b)(i-ii) to be clear that it is only applicable to reconfiguring a lot and operational work.                                                                                                                                                                                                                                                                        | The Australian Standard 2419: 2005 - Fire Hydrant Installations is a referenced document in the National Construction Code (NCC). The provisions address Building Assessment Provisions contained in this Standard and need to be removed as per s31 of the Building Act 1975. Refer AS2419 2005, Part 1, Section 5 which contains provisions for the proximity of hardstand areas from various water supply sources.<br>Note that although AS 2419 only addresses requirements for class 2-9 buildings, local governments should not prescribe hardstand requirements for Class 1a buildings (dwellings) due to the scope of the Building Assessment Provisions. Refer section 32 of the Building Act 1975 for local laws, local planning instruments and local government resolutions that may form part of the building assessment provisions. | <p><b>No change proposed</b><br/>This outcome should also apply to material change of use that may result in multiple buildings, as specified in the AO. Uses this outcome may be relevant to includes Short-term accommodation, Tourist Park, Nature based tourism or Rural industry uses.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 9.                                 | Landslide overlay code Table 8.2.12.3.1                            | Section 31(4) of the Building Act 1975<br>Section 8(5) of the Planning Act 2016                                                                                                            | Review the <b>landslide</b> hazard overlay code to ensure it does not address building assessment provisions addressed under the <i>Building Act 1975</i> .<br>For example, remove AO1.1 unless it can be clarified that the landslide areas are only relevant to coastal hazards. Note that this is not an exclusive list of all provisions to be reviewed when revising the code. | The code includes building assessment provisions that should not be addressed in the planning scheme. For assistance in reviewing the code, refer to section 3.10 of the guidance material- Integrating building work in planning schemes- Guidance for local governments (updated June 2021).<br><br>The structural stability of buildings is to be assessed by a certifier on a case-by-case basis in line with the building assessment provisions. | <b>No change proposed</b><br><br>AO1.1 seeks to meet the State interest for landslide hazards by facilitating land uses to avoid landslide risk areas. Where this is not possible, we do not want to approve land use that may be at risk from landslide risk on above slopes, compromise the stability of the land or increase risk to surrounding premises. To assess this, the development including building, excavation, cut or fill, needs to be looked at holistically. Once the land use is approved, BAPs assess the structural stability of the building on the site but do not consider other items relevant to an MCU. Without this AO, there may be a risk that a building certifier only examines the building stability and not potential offsite impacts or hazard risks. This AO aligns with <i>Integrating state interests in a planning scheme – Landslide - 13.1.4.3 (6)</i> .                                                                                          |                                    |                                           |                                                                    |                                                |  |  |  |  |

| Housing supply and diversity | 1.  | Part 3 Strategic framework, 3.2 Strategic intent (2)                                                    | Policy 2 and 3              | Amend as follows:<br>"The Region's major townships and communities have a strong and proud social identity, being sustainable and well supported through the provision of a variety of <b>social and</b> affordable housing <del>and</del> lifestyle options and appropriate community and utility infrastructure."                                                                                                  | Paragraph (2) includes reference to affordable housing, which is supported, but it is requested that the Council also give support to a wider range of affordable housing outcomes to include social housing to better meet the provisions of the Housing Supply and Diversity State Planning Policy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Noted, this will be amended.</b><br><br>Council is researching affordable housing, and this will be included in a future amendment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|                              | 2.  | Ch 3.2.1 Liveable communities and Housing 3.2.1.1 Strategic outcome and 3.2.1.2 Land use strategies (1) | Policy 2 and 3              | Amend 3.2.1.2 to include specific land use strategies to include additional measures to deliver social and affordable housing outcomes by encouraging housing choices and a diversity of housing types in this location.                                                                                                                                                                                             | Additional measures to deliver social and affordable housing outcomes in the land use strategies are encouraged. For example - this can be by encouraging housing choices and a diversity of housing types in these locations. (Further information is in the SPP Housing Supply and Diversity and its Guidance Material. Nearby local government areas which address affordable and social outcomes in the strategic framework are Townsville and Mackay. The recently approved Noosa Plan 2020 has also a number of strategic outcomes for housing choice).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>No change proposed.</b><br><br>Council is researching affordable housing, and this will be included in a future amendment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                              | 3.  | s8.2.5 Building heights overlay code, Table 8.2.5.3.2, Table 8.2.5.3.3                                  | Policy 3                    | Justify changes in maximum building heights in Table 8.2.5.3.2 for Airlie Beach Precinct B (increase from 14 to 18 m), Airlie Beach Precinct E (increase from 14 to 18 m) and Airlie Beach Precinct F (decrease from 18 to 14 m). Clarify and justify changes to the slope from exceeding 15% to be between 15 to 25% in Table 8.2.5.3.3 and confirm is there is consistency with the landslide hazard overlay code. | Previously, the maximum building heights for the Airlie Beach Precincts were within Table 5.7.1 Building work, which has been moved to the Building heights overlay code Table 8.2.5.3.2. The major amendment package does not provide reasoning for changes to the heights in Precincts B, E and F of Airlie Beach.<br><br>Previously the tables of assessment (Table 5.7.1) identified maximum building heights on slopes for zones (i.e. Residential, centre, industry, recreation, environmental etc.) to be 10 above ground level where located on slopes exceeding 15%. It is noted that these provisions have been moved to the Building height overlay code and changed to be within a range of 15-25% slope in Table 8.2.5.3.3 for a number of zones and new provisions for building heights on slopes greater than 25% introduced through Table 8.2.5.3.1. The reasoning for these changes is sought when the landslide overlay code has been amended to pick up development on land with a slope of 15% or greater, consistent with the definition of landslide hazard. | <b>No change proposed.</b><br>We have altered the Airlie Beach precinct names to set out in a more logical order. The building heights for each location have not varied.<br><br>Amendments to building height for slope ranges were made to create a fair and reasonable trigger for building height impact assessment on extreme slopes greater than 25%, utilising the <i>Average building height</i> methodology. This is necessary to reduce red tape on extreme slope lots (e.g. Seaview Dr), which should permit a dwelling as of right but all are currently triggered as impact assessment under current building height provisions.<br><br>The building height overlay code trigger for impact assessment is not related to the Landslide hazard overlay code. The Landslide Hazard Overlay triggers any development triggered on the landslide hazard overlay map or over 15% slope as per the relevant TOA.<br><br>For further clarity, please see the Council Meeting report <a href="#">here</a> . |
|                              | 4.  | Schedule 2-Mapping                                                                                      | Policy 5                    | Provide confirmation if council has undertaken or intends to undertake a housing needs assessment and / or land supply analysis to support the proposed zone changes.                                                                                                                                                                                                                                                | The proposed amendment involves a number zoning changes including moving rural land to rural residential or low density residential.<br><br>In local government areas which have at least one urbanised area with a population greater than 10,000, there is a need to identify the local growth pressures and housing needs projections. Undertaking a land supply analysis and housing needs assessment will provide                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | In the future, Council will be undertaking an urban and peri-urban growth study to inform future zone amendments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|     |                                                                     |          |                                                                                                                                                                                 | The avoidance of development within the erosion prone area within the coastal management district.                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | within an erosion prone area aligns with SPP 2017 and guidance material. These outcomes included provisions for:<br>a) coastal-dependent development; or<br>b) temporary, readily relocatable or able to be abandoned development; or<br>c) essential community infrastructure; or<br>d) minor redevelopment of an existing permanent building or structure that cannot be relocated or abandoned.<br>There is no need to duplicate these provisions where Erosion prone area is also in a Coastal management district. |
| 21. | Coastal hazards overlay Assessment benchmarks table 8.2.7.3.2       | Policy 1 | Amend the assessment benchmarks to: Acknowledge protection of coastal processes where development occurs within a coastal management district outside of a coastal hazard area. | This table only refers to coastal hazard areas. The coastal management districts can extend beyond EPA and storm tide areas and the assessment benchmarks need to protect the state interest where that can occur. | <b>Noted, this will be amended.</b><br>Table 8.2.7.3.2 amend title 'All development in coastal hazard areas and the Coastal Management District.' This will ensure that the subsequent assessment benchmarks protecting coastal amenity, public access, natural features and coastal processes also apply to development within the Coastal Management District.<br>Amend Coastal Hazard area Admin definition in Schedule 1: 'An area that is:<br>(a) identified as wave run-up or inundation area on Coastal hazard overlay map - Storm tide inundation;<br>(i) wave run-up area is considered to affect premises 200m landward from the highest astronomical tide. It represents the peak elevation of the intermittent process of advancement and retreat of the shoreline associated with wave processes during the coastal inundation event; and<br>(ii) inundation area is located landward of the wave run-up area and is assumed to persist for a sufficient duration to cause inundation of land below this design water level;<br>(b) identified as coastal erosion subcategory or permanent inundation due to sea level rise at 2100 sub category on Coastal hazard overlay map - Erosion prone areas and Permanent inundation;<br>(c) within the identified Coastal Management District on the Coastal hazard overlay map; or<br>(d) if not identified on the Coastal hazard overlay maps, an area of land affected by the Defined Storm Tide Event (DSTE).' |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 22. | Coastal hazards overlay Assessment benchmarks table 8.2.7.3.2 AO2.1 | Policy 1 | Amend as follows: AO2.1(a) existing natural environmental features, such as mangroves and wetlands, are maintained as much as possible; or                                      | The requirement within policy 1 of the coastal environment state interest is to avoid impacts on natural environmental features.                                                                                   | <b>Noted, this will be amended.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 23. | Coastal hazards overlay Assessment benchmarks                       | Policy 1 | Amend to include a reference as a note in the coastal hazards overlay code regarding prescribed tidal works assessment.                                                         | Prescribed tidal works is not mentioned in the overlay code.                                                                                                                                                       | <b>Noted, this will be amended.</b><br>Council will add a note in the Coastal hazard overlay code, 8.2.7.1 Application, to direct applicants to the State Code for                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

Development does not involve reclamation of land below tidal water, other than for the purpose of:<br/>                 a) coastal-dependent development, public marine development or community infrastructure, where there is no reasonable alternative; or<br/>                 b) strategic ports, priority ports, boat harbors or strategic airports and aviation facilities in accordance with a statutory land use plan, or statutory master plan, where there is a demonstrated net benefit for the state or region and no feasible alternative exists; or<br/>                 c) coastal protection works or work necessary to protect coastal resources or coastal processes.</p> <p><b>No acceptable outcome.</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p><b>Cultural Heritage</b></p> | <p>24.</p> | <p>Coastal hazards overlay<br/>Assessment benchmarks</p>                 | <p>Policy 3</p> | <p>Amend to include an assessment benchmark that addresses state interest coastal environment policy 3 regarding reclamation of land under tidal water.</p>                                                                                                                                                                                                                                                                                | <p>The SPP requires that reclamation of land under tidal water is avoided other than for specified purposes. Reclamation is not mentioned in the new codes and therefore this policy is not met.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Under S116 of the QLD Heritage Act 1992, Council may remove a place from its local heritage register. The <a href="#">Whitsunday Local Heritage Register Policy</a> dictates the process for adding or removing items, in accordance with the Act, but specifies additional material that must be submitted to Council to consider whether it should be de-listed, including structural reports, builders quote and Heritage assessment to define fabric to be salvaged, stored or de-accessioned.</p> <p>Council has in the past elected to utilise this Local Government driven process rather than the development assessment process to remove heritage listing of irreparably damaged buildings, as ultimately this step must be completed to update the register and it better supports community groups or those who have suffered through Cyclone Debbie.</p> <p>The reasoning for heritage de-listing of each item was outlined within each respective Council meeting report and within newspaper public notices, in accordance with the <i>QLD Heritage Act 1992</i> removal process. Significant fabric could not be retained or re-used within future structures; hence, each was removed from the local heritage register.</p> <p>23/08/2017 OM - St James Uniting Church, Proserpine Plumbing (removed)<br/>                 10/03/2021 OM – Hook Island Underwater Observatory, Proserpine War Memorial &amp; Palace Hotel (removed)</p> <p><b>Request to amend mapping:</b> The Uniting Church in Proserpine was also removed on 10 March 2021 OM. Council is requesting the removal of the Heritage Overlay from the subject parcel of land (6RP718842).</p> |
|                                 | <p>25.</p> | <p>Heritage Register (under the <i>Queensland Heritage Act 1992</i>)</p> | <p>Policy 4</p> | <p>Further justification is required identifying the reasons (and background justification) for the removal of 5 places from the 2017 planning scheme Heritage Overlay as follows:<br/>                 1. Hook Island Observatory;<br/>                 2. Proserpine Memorial;<br/>                 3. Palace Hotel;<br/>                 4. Proserpine Plumbing building (former theatre); and<br/>                 5. Bowen Church</p> | <p>According to the Council meeting agenda material, Hook Island Observatory is already demolished, Proserpine Memorial is to be replaced and Palace Hotel is in critical repair. It should be noted that these reasons relate to the need for development approval to demolish them not necessarily removal from the local heritage overlay and register.</p> <p>Investigation indicates that Proserpine Plumbing building (former theatre) and the Bowen Church were removed from the local heritage register because of their state of repair sometime in 2017.</p> <p>Clear reason for the action of removing these places from the heritage register is required to provide community confidence in the system of local heritage place protection.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|  |     |                        |                  |                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--|-----|------------------------|------------------|-------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | 26. | 8.2.10.3.1 PO1/AO1.1   | Policies 5 and 6 | Amend PO1 and AO1.1 to merge the PO and AO and state no acceptable outcome is prescribed. | <p>It is questionable as to whether AO1.1 is an appropriate AO given there would be many ways in which an application could demonstrate compliance with it. It may be preferable to revise the PO to incorporate concepts drawn out in the current AO (in fact the AO reads more like a PO if you then look at the codes purpose statement).</p> <p>Comments on terms used in the current AO (possible PO):<br/>         "As far as practicable" is a low standard that lacks certainty and clarity.</p> <p>However, the validity of (c) as an alternative provision is recognised, with two changes. Work of minor scale can have a large impact on cultural heritage significance, therefore the standard of "minor impact on the cultural heritage significance of the local heritage place or area" is recommended instead. Secondly, using the term "economic" rather than "significant" use ensures the outcome applies only when necessary to conserve the place, and hence is more consistent with the performance outcome.</p> | <p><b>Noted, this will be amended.</b><br/>         The AO is proposed to be retained, with exception of the below amendments:</p> <ul style="list-style-type: none"> <li>- Council will remove 'as far as practicable' from AO1.1 (b);</li> <li>- Council will amend AO1.1 (c) to:<br/> <i>"Only results in minor impacts on the cultural heritage significance of a place if it is necessary to maintain an economic use of the heritage place."</i></li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                          |
|  | 27. | 8.2.10.3.1 AO1.2       | Policies 5 and 6 | Amend to delete AO1.2                                                                     | Any development can be "undertaken with reference to" the Burra Charter. The clause does not specify an actual acceptable outcome. The Burra Charter is a technical standard applied by the planning scheme policy (SC6.3.3.2(1)(e)). Could be considered as part of a note to a new PO1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p><b>Noted, AO1.2 will be deleted.</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|  | 28. | 8.2.10.3.1 AO2.1       | Policies 5 and 6 | Amend to delete AO2.1                                                                     | AO2.1 is written like a condition or a note. It is not setting a clear benchmark for what is required of a development in relation to archaeological values at a place. It would be preferable to signal the points it makes in notes attached to PO2 and maybe consider expanding PO2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p><b>Noted, this will be amended.</b><br/>         AO2.1 will be amended to define an assessable benchmark:<br/> <i>Where a ground breaking activity is required within the boundary of a Heritage place that has been identified as an archaeological place, archaeological significance is defined by a suitably qualified professional and protected from development impacts</i></p> <p>Note - A suitably qualified and experienced archaeologist must be appointed to define identified and/or potential archaeological artefacts and features and assess the impact of the ground breaking activity. The archaeologist must develop and, where required by Council, oversee the implementation of an Archaeological management created in accordance with PSP SC6.3 (Heritage).</p>                                                                                 |
|  | 29. | 8.2.10.3.1 PO3 / AO3.1 | Policies 5 and 6 | Amend PO3 an AO3.1 to merge the PO and AO and state no acceptable outcome is prescribed.  | <p>AO3.1 should be merged into PO3 (there are elements in it that should feature in the performance outcome). The notes can apply to the performance outcome. AO3.1 does not have the level of measurability required in an acceptable outcome.</p> <p>The heading to PO3 has a typo – the first 'or' should be 'of'.</p> <p>Use of the word 'altered' means the current drafting of the performance outcome overlaps with PO1 (and its acceptable outcome). If what is really being referred to is demolition (total or substantial), maybe is the word that should be used. 'Altered' leads to confusion with PO1.</p> <p>The 'Local Heritage Register Policy' has not been provided for DES consideration and is not available online. It should be consistent with the requirements in the Heritage Act in relating to removing places from the Local Heritage Register.</p>                                                                                                                                                        | <p><b>Noted, this will be amended.</b><br/>         Whilst Council is reluctant to apply 'No acceptable outcome', in this instance it is appropriate.</p> <p>PO3 to be amended:<br/>         A Heritage place or part of a Heritage place must not be demolished, unless it can be demonstrated that:</p> <ul style="list-style-type: none"> <li>(a) it is not capable of structural repair as certified by a suitably qualified professional; and</li> <li>(b) repair is not feasible having regard to economic or health and safety considerations.</li> </ul> <p>Notes within the AO will be retained.</p> <p>Heading above PO3 will be amended to fix typo.</p> <p>The <a href="#">Local heritage policy</a> is available on Council's website within the <a href="#">Policy section</a> and the policy consistent with the <a href="#">QLD Heritage Act 1992</a>.</p> |

| 51. | Table 5.9.2.5 Bowen local plan - Precinct B - Mixed use zone | Policy 1 | Amend table 5.9.2.5 to make marine industry code assessable within the Precinct B mixed use zone.                                                                                                               | <p>The diversification of uses achieved by rezoning Precinct B to mixed use is generally supported. However, the current level of assessment for marine industry uses (code assessment) should be maintained within Precinct B. Marine industry is impact assessable in the mixed use zone, and the tables of assessment for Precinct B mixed use zone specify no change to the level of assessment for marine industry.</p> <p>Alternate solutions are available including maintain the existing zoning throughout the harbour and adopting finer grain precinct provisions and levels of assessment in the local plan to diversify land use potential as required in each precinct.</p> | <p><b>No change proposed.</b></p> <p>The existing use rights will continue for the current businesses within Precinct B; however, the intent of Precinct B is to support current marine industry, with potential for new marine orientated business activities, service industry, educational establishment, port services, offices and accommodation activities above street level to enhance the development potential of the Precinct. Marine Industry will be encouraged to move to Precinct C with heavy marine industry and slip lane marine development.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 52. | 7.2.2 Bowen Local Plan Code; Table 5.9.2.5 Bowen local plan  | Policy 1 | Remove references to accommodation activities within the Local Plan Code and make all accommodation activities impact assessable throughout all precincts in the Tables of Assessment for the Bowen Local Plan. | <p>The Bowen Boat Harbour primarily intended to operate as a marine facility. Explicit support for accommodation activities in the local plan code and levels of assessment may set unreasonable expectations that accommodation activities will be compatible with existing uses.</p>                                                                                                                                                                                                                                                                                                                                                                                                    | <p><b>No change proposed.</b></p> <p>The Bowen Local Plan and associated re-zonings aim to facilitate the Bowen boat harbour and Foreshore area to be a major driver of economic growth in the Whitsunday region. The purpose of the BLP is to attract private investment and development to encourage visitor accommodation, business growth and the establishment of marine industries in designated areas.</p> <p>The Local Plan is broken up into three distinct precincts. Precinct A is the Foreshore and Starboard Drive, which focuses on business, entertainment and accommodation overlooking McCanes Bay. The existing use rights will continue for the current businesses within Precinct B; however, the intent of Precinct B is to support current marine industry, with potential for new marine orientated business activities, service industry, educational establishment, port services, offices and accommodation activities above street level to enhance the development potential of the Precinct. This precinct includes amenity and design controls that aim to buffer Precinct A from the Intensive Marine Industry in Precinct C. Precinct C aims to facilitate heavy marine lifting, marine supplies/industrial uses, with no sensitive uses being in this precinct.</p> <p>The assessment benchmarks ensure that the Marina may encompass a mix of uses without conflict, through land use, landscaping, siting, orientation, and design controls. The BLP will encourage walkability and have strong connectivity to Bowen's existing Central Business District (CBD) with new</p> |

| Agriculture                     | 1.  | Strategic Framework 3.2.4 Safety and resilience to hazards Page 7                                       | Policy         | Include specific wording in the Strategic Framework in relation to, in the first instance, avoiding Acid Sulphate Soils.                                                   | Department of Resources suggests including reference to Acid Sulfate Soils (ASS):<br>Low lying areas across the Whitsunday Council area contain ASS that, if exposed, can result in damage to buildings, assets, infrastructure and the local environment. The disturbance of ASS is to be avoided where possible. Where disturbance is unavoidable, the disturbance should be minimised to prevent the mobilisation and release of acid, iron and other contaminants.                                                                                                                                                                                                                                                             | <b>Noted, this will be amended.</b><br><br>Accept change, this will be incorporated within Section 3.2.4.2                                                                                                                                                                       |
| Mining and extractive resources | 2.  | 9.3.6.2 Purpose and overall outcomes (2)(a) Page 9:41 Section 2                                         | Policy 1 and 2 | Amend as follows:<br>(a) extraction of resources occurs in a <b>sustainable responsible</b> manner,                                                                        | The issue is extractive industry by its very nature cannot be conducted sustainably.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>No change proposed.</b><br><br>If in the future Council intends to amend the Extractive Industry Code, these notes will be taken into consideration.                                                                                                                          |
|                                 | 3.  | Part 9 – 9.3.6 Extractive industry code Page 9:41 PO2                                                   | Policy 1 and 2 | Amend PO2 to be a similar approach to PO1.                                                                                                                                 | PO2 requires extractive industry to maintain suitable and sustainable landscaping on the site. Clarity is sought on what is meant by sustainable landscaping. If this refers to rehabilitation of the site, this should occur at the completion of all operations at a site/within a site. A rehabilitation plan will be part of the DA and/or EA. It is noted that PO1 deals with a related element of public safety where landscaping with battered banks is implemented as a safety measure. It is noted that the acceptable solution provided for PO1 is 'the extractive industry is undertaken in accordance with an approved environmental management plan, which addresses environmental and social impacts of operations'. | <b>No change proposed.</b><br><br>If in the future Council intends to amend the Extractive Industry Code, these notes will be taken into consideration.                                                                                                                          |
|                                 | 4.  | Part 9 – 9.3.6 Extractive industry code Page 9:41 PO2 to PO7 inclusive & associated acceptable outcomes | Policy 1 and 2 | Amend PO2 – PO7 to refer only to refer to operations above a certain threshold, e.g. removing in excess of 5,000 tonnes / year.                                            | PO7 requires that entry to extractive industry operational areas is restricted to authorised personnel and authorised vehicles, with the associated AO7.1 of a 2m high fence to be erected and maintained around all extractive industry operations and associated infrastructure. An issue arises if the requirement of a 2m high fence is applicable to low-impact sites.                                                                                                                                                                                                                                                                                                                                                        | <b>No change proposed.</b><br><br>We consider that any extractive industry operations, no matter the size, can pose a safety risk and should have a 2m high fence to ensure safety. Should safety be demonstrated through alternate design or siting, an applicant may meet PO7. |
|                                 | 5.  | 9.3.6 Extractive industry code Table 9.3.6.3.1 PO4                                                      | Policy 1 and 2 | Amend AO4.1 as follows:<br>Extractive industry, involving blasting or crushing, is not carried out <b>continuously</b> within 1km of any sensitive use.                    | The SPP and various environmental instruments do not require a separation distance between blasting and pre-existing uses. Section 440ZB of the Environmental Protection Act 1994 sets standards for air blast and ground vibration. If blasting is less than 1km from sensitive development, it must be designed and monitored to achieve acceptable standards of ground vibration, air blast overpressure and dust. This is addressed as AO6.3 and AO6.4.                                                                                                                                                                                                                                                                        | <b>No change proposed.</b><br><br>If in the future Council intends to amend the Extractive Industry Code, these notes will be taken into consideration.                                                                                                                          |
|                                 | 6.  | Extractive Resources overlay code Table 8.2.8.3.1 AO4.1                                                 | Policy 1 and 2 | Amend AO4.1 as follows:<br>Development for an extractive industry use, <b>in a KRA separation area, does not impact on sensitive or incompatible uses outside the KRA.</b> | For consistency with principles of SPP: Mining and Extractive Resources Guideline.<br>It may be more practical to extend a quarry into a resource within a KRA separation area, that was not included in a KRA resource/processing area when drafted, for a number of possible reasons. However, it should not impact on sensitive or incompatible uses.                                                                                                                                                                                                                                                                                                                                                                           | <b>No change proposed.</b><br><br>If in the future Council intends to amend the Extractive Industry Code, these notes will be taken into consideration.                                                                                                                          |

|                     |     |                                                                                                   |                |                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                       |

|        |    |  | assessment to occur for the same use and identify appropriate ways in which this might be managed (such as through a combined development application for a material change of use and preliminary approval for building works). | around Airlie Beach as well as removal of the Airlie Beach Local Plan which set the building heights and urban design criteria for the Airlie Beach town centre. At the time of adoption Council was taking steps to prepare an urban design and place making strategy for Airlie Beach, which will replace the Airlie Beach Local Plan in a future reiteration of the planning scheme. This approach was considered satisfactory and as such, it was recommended the matter be identified as a priority for council to investigate when progressing a planning scheme amendment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                              |
| Advice | 5. |  | Consider the findings of tourism studies and streamlining levels of assessment for tourist developments.                                                                                                                         | <p>Our assessment at the time of Planning Scheme adoption indicated that the strategic framework identified existing tourism opportunities in the region and a major tourist destination (Hamilton Island), is supported by a local plan which ensures development does not compromise the ongoing operation of tourist facilities and attractions on the island.</p> <p>A number of tourism studies were undertaken after the now adopted planning scheme drafting had significantly progressed. These documents outlined the future for tourism in the region and how this can be supported, for example by benchmark levels of assessment for tourism activities and accommodation.</p> <p>Policy 1 of this state interest required that the proposed planning scheme consider the findings of the tourism studies; this was not achieved due to the timing of the release of the study findings. At the time of adoption that council was encouraged to investigate and consider as a priority when progressing a future planning scheme amendment.</p> | Council considered findings of tourism studies and streamlining levels of assessment for tourist developments within the Major amendment, which includes a new Rural tourism code and lower levels of assessment for tourism associated developments.                                                                                                        |
| Advice | 6. |  | Revise the Multi-unit use code to expand its application as per its intent, as articulated in the tables of assessment.                                                                                                          | Our assessment at the time of Planning Scheme adoption indicated that some tourist accommodation required assessment against the Multi-unit Use Code, for example short-term accommodation which includes motel, backpackers and serviced apartments. However, the way in which the Multi-unit Use Code was drafted restricts its application to only multi-unit uses, which are defined as long-term households. While this does not adversely affect the state interest, it is an outstanding matter that council is encouraged to rectify as a priority when progressing a future planning scheme amendment. This was communicated to council in a letter on 10 April 2017.                                                                                                                                                                                                                                                                                                                                                                              | Council revised the Multi-unit use code to expand its application to a variety of uses, as articulated in the tables of assessment. The major amendment identifies it as the Short-term accommodation and multi-unit use code, which includes revised outcomes suitable for all short- or long-term accommodation uses that trigger the code for assessment. |
| Advice | 7. |  | Reconsider the levels of assessment in the Community Facilities zone to facilitate development surrounding a strategic airport (Whitsunday Coast Airport).                                                                       | Our assessment at the time of Planning Scheme adoption indicated that the adopted planning scheme recognised the importance of existing airports                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Council investigated the need to reconsider levels of assessment, however, it was deemed that existing provisions are sufficient to enable expansion. Air services are accepted development if undertaken by or on behalf of Council and Council is the primary                                                                                              |

|        |    |  |                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|----|--|---------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |    |  |                                                                                                               | <p>(Whitsunday Coast Airport and Hamilton Island Airport) in the strategic framework and via the community facilities zone code, tables of assessment and the Airport Environs Overlay Code.</p> <p>Policy 2 of this state interest requires the proposed planning scheme to facilitate development surrounding a strategic airport. The strategic framework specifically mentions the development of an international airport (terminal and runway) and associated activities at Whitsunday Coast Airport, which is included in the community facilities zone.</p> <p>The levels of assessment in the community facilities zone identifies that activities such as air services, maintenance and repair of aircraft, freight and logistics depots, air charter businesses, flight training , that are associated with the airport are impact assessable in this zone. At the time of adoption, council was encouraged to investigate and consider the level of assessment for uses near the airport as a priority when progressing a future planning scheme amendment.</p> | <p>shareholder of the Whitsunday Coast Airport (Proserpine). The Air services definition is very broad and includes ancillary activities noted in the State’s commentary that is anticipated to support airport investments in the future.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Advice | 8. |  | <p>Reconsider the self-assessable development assessment criteria to be clearer and offer more certainty.</p> | <p>Our assessment at the time of Planning Scheme adoption considered the development assessment criteria for self-assessable uses.</p> <p>The adopted planning scheme sought to cut red tape for activities perceived as having a low risk, by making them self-assessable. However, the self-assessable provisions in the adopted planning scheme were ambiguous and lacked certainty. For example, the Home based business code included criteria that “the home based business does not produce any offensive odour emissions beyond the site boundaries.”</p> <p>Earlier versions of the adopted planning scheme included these self-assessable criteria, they are considered acceptable - but not ideal. This was therefore considered an outstanding matter that council was encouraged to remedy as a priority, through a planning scheme amendment.</p>                                                                                                                                                                                                             | <p>Council considered accepted development benchmarks albeit, has not made significant changes in the Major amendment in response to this advice for reason of balancing risk vs red tape reduction. The uses that may be accepted development are generally low risk and if Council receives a complaint regarding their operation, then we may compliance them against the accepted development benchmarks to trigger a planning application that facilitates improved design solutions.</p> <p>Regarding the example provided in the Home-based business code including criteria that, “the home-based business does not produce any offensive odour emissions beyond the site boundaries”, as an ambiguous trigger for accepted/code assessment. The alternative is specifying a more detailed and quantifiable benchmark in line with the <i>Environmental Protection Act</i> for noise, odour or sound, which requires a technical background to understand and lacks meaning to the audience it is intended for, making it confusing which equates to ‘red tape’.</p> <p>Ultimately, in the instance of this and similar natured benchmarks applying to accepted development, the Planning Scheme aims to reduce the complexity for users in low-risk development.</p> |

**Council Request**

1. The Biodiversity, Waterways and Wetlands have a layer called ‘Climatic Regions’ which assisted stormwater management design directives. As these requirements have been updated as per the SPP guidance, the layer is not longer required. It is requested by Council to delete this layer.
2. The Uniting Church in Proserpine was also removed on 10 March 2021 OM. Council is requesting the removal of the Heritage Overlay from the subject parcel of land (6RP718842).
3. Council would like to add a note into the Reconfiguring a Lot Code regarding the mandatory assessment benchmarks for walkable neighbourhoods that came into effect on Monday 28 September 2020. **Note: Mandatory assessment benchmarks came into effect on Monday 28 September 2020, these benchmarks override some Planning Scheme outcomes for development involving reconfiguring a lot, please refer to Schedule 12 and 12A of the *Planning Regulation 2017*.**

Mr Brett Nancarrow  
Director – Planning  
Department of State Development, Infrastructure, Local Government and Planning  
PO Box 257  
MACKAY QLD 4740

Dear Mr Nancarrow

**RE: Response to Notice of Advice Letters dated 19 July 2021 & 15 October 2021 regarding State Interest Review**

The Department of State Development, Infrastructure, Local Government and Planning (DSDILGP) has requested amendments to the proposed Major Amendment and Administrative LGIP Amendment in accordance with Chapter 2, Part 4, Section 17.3 of the *Ministers Guidelines and Rules 2020*. The proposed Major Amendment has been revised to appropriately address state interests, as per the DSDILGP advice dated 19 July 2021 & 15 October 2021 – refer to **Attachment 1**.

The following information and/or documentation is provided to comply with Chapter 2, Part 4, Section 17.4 of the *Ministers Guidelines and Rules 2020* and respond to DSDILGP queries (Numbers 1 to 7 in Advice Letter dated 19 July 2021 & Number 1 to 6 in Second Advice Letter dated 15 October 2021):

- 1) Zone Amendments:
  - a) A complete list of the zone amendments with justifications, refer to **Attachment 2**; and
  - b) Extensive consultation was completed between Whitsunday Regional Council and the then Department of Natural Resources, Mines and Energy (now Department of Resources) relating to the zone amendments over state owned land, and a completed list was sent to the Department for their review, which was generally accepted.
- 2) An assessment for the Proposed Major Amendment against the Mackay, Isaac and Whitsunday Regional Plan 2012 has been completed, refer to **Attachment 3**.
- 3) Council has responded to the list of recommended amendments from DSDILGP, on 19 July 2021 – refer to **Attachment 4**, including;
  - a) Table 1 Regulated requirements prescribed in the Planning Regulation;
  - b) Table 2 Section 8(5) of the Planning Act 2016;
  - c) Table 3 State interest actions;
  - d) Table 4 State Interest Advice; and

- e) Table 5 Compliance with Ministerial Conditions and Requests.
- 4) In response to the further advice on 15 October 2021, Council added additional amendments to **Attachment ##** from the 'Second Advice Notice'.
- 5) An amended Community Engagement Plan has been attached, with amended timeframes and the requirements for additional consultation. if required, refer to **Attachment ##**.
- 6) Council is satisfied the Administrative LGIP amendment meets the requirements of the *Ministers Guidelines and Rules 2020*, as the proposed Administrative LGIP Amendment is in accordance with Chapter 5, Part 1, 1.1 e) being an outdated term (the Stormwater guidelines are being updated in the Planning Scheme), and Chapter 5, Part 1, 1.1 g) as the cross-reference to the Planning Scheme must be updated.
- 7) Compliance with the Ministerial conditions from 19 June 2017 have been detailed in **Table 5** of the advice from DSDILGP, however additional material is attached, relating specifically to:
  - a) The levels of assessment at the Whitsunday Coast Airport – refer to **Attachment ##**; and
  - b) Discussion on the acceptable outcomes of self-assessable development assessment criteria in the Planning Scheme – refer to **Attachment ##**.
- 8) An amended electronic copy of the Proposed Major Amendment with the requested amendments from the State Interest Review – refer to **Attachment ## Proposed Major Amendment (V4.1)**.
- 9) A copy of the updated mapping with amendments to the following layers only:
  - a) Zoning Map - The proposed zone amendment of 51RP864671 has been removed as per State requirements;
  - b) Bushfire Hazard Overlay- the Bushfire Hazard Buffer has been renamed to 'Potential Impact Buffer';
  - c) Heritage Overlay – the Palace Hotel, Proserpine will be returned to the mapping as per State requirements;
  - d) Coastal Hazards Overlay - A layer has been added called the 'Coastal Management District';
  - e) Coastal Hazards Overlay – the Erosion Prone mapping has been amended;
  - f) Airlie Beach Local Plan Transport Map – the indicative internal road network will lose one arm connecting to Waterson Way;
  - g) Strategic Framework map - MSES & MNES mapping have been included; and
  - h) Biodiversity, Waterways and Wetlands Overlay - Climatic Regions has been deleted as it is no longer required.

The updated mapping (**V4.1**) is available on Whitsunday Regional Council's link [https://mapping.whitsundayrc.qld.gov.au/connect/analyst/mobile/##/main?mapcfg=Planning\\_Major\\_Amendments](https://mapping.whitsundayrc.qld.gov.au/connect/analyst/mobile/##/main?mapcfg=Planning_Major_Amendments) and a copy will be provided to the Department as per requirements.

Council looks forward to a favourable outcome of the State Interest Review for the Proposed Major Amendment, pursuant to the *Ministers Guidelines and Rules 2020*.

Your advice regarding Council's ability to commence community consultation will be appreciated at your earliest convenience.

Yours faithfully

Rod Ferguson

Chief Executive Officer

| 1                    | 1 RP727724   | Bootooloo Road, Bowen (L1 RP727724)             | P1 31/01/2018            | Rural Zone                   | Medium Impact Industry Zone  | Submission 7 (2016)                           | <p>The zone is being amended to reflect the long term use of the industry on the land. The current use is Truss and Framing manufacturing, that was approved under DA09226 – MUC (General Industry – Truss &amp; Frame Manufacturing) in 2009. The site was approved for a Building Permit for Lotts Meats - Lotts Abattoir – Cold room and work area extension in 1982, confirming a historic use over the land for an abattoir.</p> <p>The land is exempt in QLD Globe under Agricultural Land Audit - the property has been cut out of the Audit, most likely due to the long term use of the land. Similar properties along Bootooloo Road are also small term industry and have also been made exempt. The property is on the eastern side of Bootooloo Road, which is increasingly changing from Rural to more intensive industries such as urban and industrial. Industrial uses range along Bootooloo Road stemming from the airport and surrounding industrial uses that are north of the subject site.</p> <p>While the proposed zone is not supportive of the state interest of Agriculture, the zone is supportive of the state interest of Development and Construction, as the use on the land supports this through manufacturing of supplies that are used in construction, and industry in the region. The business expansion through the zone would support the local development sector and would not be impacting on any further agricultural land uses, due to historic use of the site being altered over 40 years ago from agriculture to industry.</p> | While it is acknowledged the propose zone conflicts with DRO 4.4.3 'The region's best agricultural land is protected from weeds and pest animals, inappropriate land uses and further fragmentation that lead to its alienation or diminished productivity' the proposed zone also supports the DRO 6.2.8 'Facilitate the expansion of existing business precincts and key industry sectors such as aviation, manufacturing, aquaculture, agriculture, tourism, mining, extractive industries, bulk exports and mineral processing and marine industry sectors.' The acknowledged Manufacturing and Industrial use should be allowed within the current lot confines linking the industrial uses along Bootooloo Road to the north and south of the site, providing the buffer between Rural and Residential uses meeting DRO 7.1.6 'Sufficient land for industrial development and other employment uses is identified in appropriate locations, ensuring land use conflicts are minimised and accessibility is enhanced.' | Yes                                               |

| 27 | 5 RP738979                                                            | Allan Road, Conway Beach (L5 RP738979)            | P2 14/03/2018 | Rural Zone                          | Rural/Rural Residential Zone | Submission 18 (2016)                          | The request was made in the second round of Public Consultation in 2016 for the then draft Planning Scheme. The request was to reflect the subdivision approval and zone the entire lot Rural Residential. The approval is DA20140001 – ROL 1 into 6 Lots (P&E 60/2015) - Department of State Development, Infrastructure & Planning Ref SDA-0114-007645 – subdivision was given approval conditions in relation to – Regrowth Vegetation. The approval will lapse 1 April 2022. Council has recommended the smaller front lots to be Rural Residential and back rear lot to be Rural zoning. | The zoning complies with <b>Section 7.2 Planning for Growth</b> in reflecting the existing DA and complies with <b>Section 7.3 Rural residential development</b> in identifying areas for lifestyle blocks which don't compromise good quality agricultural land, future urban growth or infrastructure servicing. | Yes |
| 28 | 8 SP274029 (replaced by Lots 8-11 and 16-17 on SP312198 and new road) | 70 Gillies Road, Strathdickie (L8 SP274029)       | P2 14/03/2018 | Rural Zone                          | Rural/Rural Residential Zone | Submission 19 (2016)                          | The subdivision was approved in 2014 under DA20140429 (One into 8 lots and 2 balance lots). Covenants cover the sensitive vegetation and applicable environmental overlays, and the rear lot is retained as Rural to protect the existing vegetation. Council confirms through the zone change of Lot 8 on SP274029 that the MSES covering this property will be contained fully within the rural section of the split zone or within existing covenants.                                                                                                                                     | The zoning complies with <b>Section 7.2 Planning for Growth</b> in reflecting the existing DA and complies with <b>Section 7.3 Rural residential development</b> in identifying areas for lifestyle blocks which don't compromise good quality agricultural land, future urban growth or infrastructure servicing. | Yes |

| 38 | 40 RP726947  | 9 Waterson Way, Airlie Beach (L40 RP726947)       | P3 14/03/2018 | Mixed Use Zone                      | Community Facilities Zone      | Request from Telstra                                                | Reflect existing uses of the site for a Telstra exchange, public utility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The proposed Zoning is appropriate to the use of the land, especially Telstra infrastructure as per DRO 9.2.1 'Current and future infrastructure sites and corridors are identified, protected and managed'                                                                                                                                                                                                                                                                                                                                                         |     |
| 39 | 14 SP 225070 | Riordanvale Road, Riordanvale (L14 SP225070)      | P3 14/03/2018 | Low-Medium Density Residential Zone | Community Facilities Zone      | Submission 24 (2015)<br>Submission 3 (2016)                         | Requested by Ergon whom own the land to reflect future use of the site for a public utility, electrical infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The proposed zoning is appropriate to the use of the land, especially Ergon infrastructure as per DRO 9.2.1 'Current and future infrastructure sites and corridors are identified, protected and managed'.                                                                                                                                                                                                                                                                                                                                                          |     |
| 40 | 22 SP204655  | 18907 Bruce Highway, Bowen (L22 SP204655)         | P3 14/03/2018 | Rural zone                          | Medium Impact Industry Zone    | Submission 37 (2016)                                                | The zoning aligns with surrounding land uses and the site is not of a scale that is capable of supporting rural uses. Proposed re-zoning requested by landowner by Planning Scheme submission, not associated with a development approval or existing use. The site is located adjoining the Bowen airport and an Earthmoving company that is located within the surrounding medium impact industry zone. Given the surrounding area, the site is most suitable for medium impact industry; and the intensification of the use will not adversely impact traffic or amenity within the area. The site is well located alongside the Bruce Highway to support freight traffic likely to be generated from an industrial use.      | The proposed zone supports the DRO 6.2.8 'Facilitate the expansion of existing business precincts and key industry sectors such as aviation, manufacturing, aquaculture, agriculture, tourism, mining, extractive industries, bulk exports and mineral processing and marine industry sectors.'                                                                                                                                                                                                                                                                     |     |
| 41 | 1 SP230520   | 2667 Shute Harbour Road, Mandalay (L1 SP230520)   | P3 14/03/2018 | Rural Zone                          | Low Density Residential Zone   | Request by owner                                                    | Proposed re-zoning requested by submission to reflect recently extended development approval (13/10/2017) for 19 low density residential lots over the subject site. The owner has had various discussions with Council regarding the residential use of the site, for which Council has been supportive. The site is partially affected by environmentally significant wildlife habitat overlay and regulated vegetation overlay and partially affected by acid sulphate soils.                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |     |
| 42 | 2 SP230520   | 34 Stormvogel Drive, Mandalay (L2 SP230520)       | P3 14/03/2018 | Rural Zone                          | Low Density Residential Zone   | Request by owner                                                    | Site is excluded from the Priority infrastructure area but its location alongside Shute Harbour Road will permit it to be easily connected to services and included within the PIA in future renditions of the LGIP. Located alongside Shute Harbour Road adjoining a small residential pocket of Mandalay, proposed 19 lot residential development would not have a significant impact on the road network. The site abuts a low density residential pocket of Mandalay and adjacent the Island's Inn Motel and Big 4 Airlie Cove Tourist park and would constitute infill residential development. The proposed zoning does not fragment Rural land, as the land is surrounded by residential, tourism uses and National Park. | The proposed zone is supported by <b>Section 7 Managing Growth</b> , and specifically by <b>DRO 7.1.2</b> 'Urban growth is consolidated in a compact settlement pattern within areas identified for this purpose'. The lots are infill development next to Low density residential and supporting infrastructure, including nearby access to roads, water and sewerage, to support <b>DRO 7.1.4</b> Development is located and sequenced to make the best use of existing infrastructure, and ensure efficient and cost-effective investment in new infrastructure. | Yes |

| 122 | 51RP864671  | 2-6 Banksia Court, Cannonvale (L51-RP864671)      | P4 13/02/2019 | Low-Medium-Density Residential Zone | Low Impact Industry Zone  | Submission 194 (2015)                                     | A request by the owner through a submission in public consultation in 2015. There are not existing approvals over the site, a previous approval for 18 multiple dwelling units expired in 2014. The site is adjacent to Low Impact Industry development to the west. The proposed zoning is considered consistent with the surrounding locality and a logical extension of the industrial precinct to the west and the site is fully serviced by infrastructure including Shute Harbour Road, the main transport route. Residential uses to the north and east could be buffered through adequate landscaping and building setbacks.                                                                                            | The proposed zoning is appropriate to further encourage economic and infrastructure planning in the small business linkages along Shute Harbour Road as per DRO 6.2.11 'Monitor, manage and deliver an adequate supply of industrial and commercial land.'                                                                                   | Yes |
| 123 | 62SP211518  | 119B Botanica Drive Woodwark (L62 SP211518)       | Botanica      | Emerging Communities Zone           | Rural Residential Zone    | Original request by owner (2017) altered by Council       | Emerging communities zone was used to ensure the community could comment on any intensification of the use due to the unique nature of the site and amenity concerns from neighbours. The owner requested Tourist Accommodation zone to mirror the approval over the site. Council has recommended the Rural Residential zone as it reflects the amenity of the zoning of the surrounding area.                                                                                                                                                                                                                                                                                                                                 | Council is limiting the intensification of this lot through DRO 6.2.5 'Strategically located land and facilities are protected from incompatible development for future economic uses' to ensure the surrounding uses are not impacted by further growth of the use without public consultation through the development application process. | Yes |
| 124 | 336CP858287 | 336CP858287                                       | P5 10/04/2019 | No Zone                             | Community Facilities Zone | Internal Request for functionality of the Planning Scheme | Presently, wet leases within the Region have a registered title and are considered land regulated by the Planning Scheme. However, none of these lots have a zone attributed to them but take on the zoning of the adjoining land use as per Planning Scheme, Section 1.3- Interpretation. This is not always desirable and may permit uses within these wet leases that are not preferred, or prevent uses that are supported. The wet lease areas are generally community-oriented facilities incorporating many shared facilities, and Community facilities zone code provisions are the most appropriate for development within wet leases. It addresses controls on surrounding amenity and managing environmental impact. | Community facilities zoning over wet leases in the region ensures the most appropriate infrastructure and uses are developed in the wet leases/marinas . However, none of these lots have a zone attributed to them but take on the zoning of the adjoining land use as per Planning Scheme, Section 1.3- Interpretation. This is not always desirable and may permit uses within these wet leases that are not preferred, or prevent uses that are supported. The wet lease areas are generally community-oriented facilities incorporating many shared facilities, and Community facilities zone code provisions are the most appropriate for development within wet leases. It addresses controls on surrounding amenity and managing environmental impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Community facilities zoning over wet leases in the region ensures the most appropriate infrastructure and uses are developed in the wet leases/marinas . This meets DRO 6.6.10 'Encourage global best practice design when developing and maintaining tourism infrastructure'.    |     |
| 134 | 1SP184782     | 19 Railway Road, Collinsville (L1 SP184782) | P5 10/04/2019 | Low Density Residential Zone   | Mixed Use Zone                      | Identified by Council                                     | The proposed zoning is a more accurate representation of the ongoing land use that is the Collinsville Motel and Collinsville Coalface Experience/Workers club. The proposed zoning enables potential expansions in the future that may include additional tourism opportunities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | The zoning complies with DRO 6.2.8 to facilitate expansions of existing business centres and to ensure efficient urban centres and compact settlement through Strong Economies DRO 6.2.12 providing an adequate supply of commercial land.                                        |     |

| 271 | 155SP187352 | 26 Kirkpatrick Court, Queens Beach (L155 SP187352) | P6 09/09/2020 | Recreation and Open Space Zone         | Recreation and Open Space Zone/Low Density Residential Zone | Owner Request to reflect approval | There are multiple covenants over the subject land for vegetation buffers to soften adjoining rural activities, and an easement for stormwater drainage. The easements and covenants result in the only two usable areas, one near the junction of Kirkpatrick and Inverroona Streets and a rear lot down the end of Kirkpatrick Court. The original approval DA04032 depicts that there are three (3) remaining residential allotments to be sealed in accordance with the approved plan, all of which are currently zoned Recreation and Open Space. The compromise from Council was the usable land be zoned Low Density Residential to ensure their use rights from the approval, and leave the remaining area under the easements/covenants as Recreation and Open Space.                                                                                                       | Section <b>2.3 Green Space Networks</b> are protected from inappropriate development through correct open space zonings. The residential zoning complies with Section <b>7.2 Planning for Growth</b> in reflecting the existing approvals and development over the site.                                                                                                            | Yes |
| 272 | 1RP717454   | 202- 204 Bruce Highway, Proserpine (L1 RP717454)   | P6 09/09/2020 | Low-Medium Density Residential Zone    | Community Facilities Zone                                   | Administrative Error              | The site has the Christian Outreach Centre approved in 1988 and still operating today. A zone amendment was approved by the Minister on 2 June 2000, from Residential to Special Facilities. There has been an error in Whitsunday Shire Planning Scheme 2009 and current scheme as the zoning was not passed on from 2000 Scheme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | The zoning complies with <b>Section 7.2 Planning for Growth</b> in reflecting the existing approvals and development over the site.                                                                                                                                                                                                                                                 |     |
| 273 | 11B66138    | 14 Sinclair Street, Bowen (L11 B66138)             | P6 09/09/2020 | Community Facilities Zone              | Low-Medium Density Residential Zone                         | Council Request                   | The lot is an old kindergarten complex (Community Facilities) turned into Dwelling house (20181534 MCU Dwelling House) hence the need for zone amendment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | The zoning complies with <b>Section 7.2 Planning for Growth</b> in reflecting the existing approvals and development over the site.                                                                                                                                                                                                                                                 |     |
| 274 | 1RP705173   | 18 Linley Street, Bowen (L1 RP705173)              | P6 09/09/2020 | Rural Zone                             | Low Impact Industry Zone                                    | Owner Request                     | A historic MCU for a Transport depot lapsed July 2013, submitter requested Low impact industry zone in 2016 consultation and follow up inquiries. Adjoining industry includes Toll Rail Freight Yard, QR Freight Yard, Merinda Fire brigade, Merinda Hotel and the Coast / Goonyella rail line. The site is suitably and appropriately located to host Low impact industry activities due to the surrounding uses. The subject land is fragmented agricultural land that has not been utilised for agricultural purposes based on historic satellite imagery. The land is isolated by the rail line (North), Merinda (west) or Bruce highway (south) and connects to existing rural land to the east. This fragmentation makes the land unsuitable for agricultural purposes but has good opportunity for industrial uses associated with the adjoining rail line and Bruce Highway. | The proposed zoning is a logical expansion of the existing industrial zoning of the town of Merinda through DRO <b>6.2.8</b> 'Facilitate the expansion of existing business precincts and key industry sectors such as aviation, manufacturing, aquaculture, agriculture, tourism, mining, extractive industries, bulk exports and mineral processing and marine industry sectors.' | Yes |

| 297 | 105W9361     | 14 Davison Road Wilson Beach (L105 W9361)     | P7 10/03/2021 | Recreation and Open Space Zone                 | Low Density Residential Zone                                              | Owner Request<br>Administration error        | The Whitsunday Shire Planning Scheme 2009 had the park (Lot 106) zoned as Open Space Zone, while Lot 105 was Residential House Zone. There was an error in the creation of maps for current planning scheme and zones were swapped. Lot is identified in the coastal hazard adaption strategy (CHAS) as having high storm surge, flooding and erosion issues, currently identified in overlay hazard mapping. The lot is similar to the adjoining residential lots and Council cannot take away development rights from this owner due to an administrative error. | Mapping Error                                                                                                                                                                                                                                                                                        |  |
| 298 | 311W9361     | 21 Hall Drive Wilson Beach (L311 W9361)       | P7 10/03/2021 | Recreation and Open Space Zone                 | Low Density Residential Zone                                              | Administration Error                         | Error in creation of the maps for current Planning Scheme where it was zoned Recreation and Open Space Zone. In the 2009 Shire Scheme, it was zoned Residential House. The lot has an existing dwelling. Lot is identified in the coastal hazard adaption strategy (CHAS) as having high storm surge, flooding and erosion issues, currently identified in overlay hazard mapping.                                                                                                                                                                                 | Mapping Error                                                                                                                                                                                                                                                                                        |  |
| 299 | 103SP303770  | Shingley Drive, Airlie Beach (L103 SP303770)  | P7 10/03/2021 | No Zone                                        | Mixed Use Zone                                                            | Council Request                              | New lot creation at Coral Sea Marina, the lot has multiple uses onsite, including marina terminal building and carparking, with a vacant area to the south. Coral Sea Marina is mostly zoned Mixed Use to accommodate the variety of uses and is considered the most appropriate zoning.                                                                                                                                                                                                                                                                           | The zoning is supported by Section 8.1 <b>Urban Form</b> , which encourages compact and functioning urban centres, ensuring place, and opportunities for social interaction. The use of the zone will ensure a mix of suitable development within the Marina to complement the existing development. |  |

The existing uses onsite is a carpark. The Marina is mostly zoned Mixed Use to accommodate the variety of uses and is considered the most appropriate zoning for this parcel.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | The zoning is supported by Section 8.1 Urban Form, which encourages compact and functioning urban centres, ensuring place, and opportunities for social interaction. The use of the zone will ensure a mix of suitable development within the Marina to complement the existing development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 301 | 3SP265779   | 8-12 Shingley Drive, Airlie Beach (L3 SP265779)  | P7 10/03/2021  | No Zone                             | Mixed Use Zone                                                                                              | Council Request              | New lot creation at Coral Sea Marina. The lot is a lands lease for marine facility and generally used as a walkway bordering the marina. The Marina is mostly zoned Mixed Use to accommodate the variety of uses and is considered the most appropriate zoning for this parcel.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The zoning is supported by Section 8.1 Urban Form, which encourages compact and functioning urban centres, ensuring place, and opportunities for social interaction. The use of the zone will ensure a mix of suitable development within the Marina to complement the existing development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 302 | 104SP232115 | 6-12 The Beacons Rd Airlie Beach (L104 SP232115) | POA 24/03/2021 | Community Facilities Zone           | Mixed Use Zone                                                                                              | Owner Request                | The lot was given to the Sailing Club to be utilised for marine education purposes, so the lot was zoned Community Facilities. The Sailing Club no longer need the land and wish to sell, as education facilities are anticipated to be included in their Club's re-development. Therefore, an alternative zoning is necessary that will facilitate compatible uses in the area. The adjacent Port of Airlie land is Mixed Use, therefore, this was considered the most appropriate zoning to reflect the anticipated amenity and future uses activating the Marina.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | The zoning is supported by Section 8.1 Urban Form, which encourages compact and functioning urban centres, ensuring place, and opportunities for social interaction. The use of the zone will ensure a mix of suitable development within the Marina to complement the existing development, rather than the existing zone which is prohibitive of development other than for infrastructure, and is no longer needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 303 | 310SP198022 | Henry Darwen Drive Bowen                         | BLP            | Waterfront and marine industry Zone | Waterfront and Marine Industry Zone/Mixed Use Zone/Community Facilities Zone/Recreation and Open Space Zone | Part of the Bowen Local Plan | <p>The Bowen Local Plan and associated re-zonings aim to facilitate the Bowen boat harbour and Foreshore area to be a major driver of economic growth in the Whitsunday region. The purpose of the BLP is to attract private investment and development to encourage visitor accommodation, business growth and the establishment of marine industries in designated areas.</p> <p>The Local Plan is broken up into three distinct precincts. Precinct A is the Foreshore and Starboard Drive, which focuses on business, entertainment and accommodation overlooking McCanes Bay. The existing use rights will continue for the current businesses within Precinct B; however, the intent of Precinct B is to support current marine industry, with potential for new marine orientated business activities, service industry, educational establishment, port services, offices and accommodation activities above street level to enhance the development potential of the Precinct. This precinct includes amenity and design controls that aim to buffer Precinct A from the Intensive Marine Industry in Precinct C. Precinct C aims to facilitate heavy marine lifting, marine supplies/industrial uses, with no sensitive uses being in this precinct.</p> <p>The assessment benchmarks ensure that the Marina may encompass a mix of uses without conflict, through land use, landscaping, siting, orientation, and design controls. The BLP will encourage walkability and have strong connectivity to Bowen's existing Central Business District (CBD) with new and existing landscaping to compliment the natural beauty of the area.</p> | <p>The provision of walkability requirements throughout the Local Plan is endorsed through DRO 5.3.3 <b>Physical activity and healthy lifestyles are supported through appropriate location and design, including facilitating the provision of active transport infrastructure such as pedestrian and bicycle paths, and appropriate sport and recreation facilities</b>, and generally through supporting Section 5.3 of <b>Healthy and Safe Communities</b>, to ensure the Bowen Foreshore is desirable, and safe for the community.</p> <p>The Local Plan is supported by Section 6.1 <b>Economic Leadership and Coordination</b>, through the diverse zoning and the uses permitted through the Local Plan to support initiatives that enable diverse business and industry opportunities, support emerging clusters of research and development, and facilitate new industries.</p> <p>As per Section 6.2 <b>Integrated economic land use and infrastructure planning</b>, the Local Plan will ensure the sustainable development of the Marina ensure the marina is protected from inappropriate land uses. The Local Plan will enable new marine services to the region that will ensure a flow on effect in supplementary businesses in town. The Local Plan establishes links with the town centre through pedestrian walkways and facilitating infrastructure.</p> |

## **Mackay, Isaac and Whitsunday Regional Plan 2012 Response**

The Mackay, Isaac and Whitsunday Regional Plan 2012 interests have been met through the drafting of this Major Amendment, and as a result it is considered the relevant interests of the Regional Plan have also been sufficiently integrated.

### **1. Sustainability, climate change and natural hazards**

The amendment to the Planning Scheme aims to respond to the issues of sustainability and climate change from the Regional Plan. The hazards of sea level rise, permanent inundation and flooding have been updated in response to current requirements for climate change in these aspects of the coastal hazard overlay. Mitigating climate change impacts are conducted through responsive and local assessment benchmarks through the Hazard overlay codes. Climate change and sustainability have been added into the Strategic Framework, to flow down through the Zone Codes into each Development code.

### **2. Regional landscapes**

Regional Landscapes have been further protected in the amendment through the updating of our biodiversity layers, updating of water quality requirements and the introduction of the Healthy Waters Code, to ensure the protection of our natural waterways continuing out to the Great Barrier Reef.

### **3. Environment**

Our new biodiversity layers identify and protect regulated vegetation, protected fauna areas, ecological waterways, marine parks and fish habitats and all relevant Matters of State Environmental Significance, with a new code to meet the changing requirement of the environment protection. The balance of development and environment is met through the new code, to ensure protection of our diverse Regions, while allowing development of appropriate built forms. Additional protections have been included in scenic significance for tourism within the Region, limiting certain development along scenic routes.

### **4. Natural resource management**

No amendments to the protection of agricultural land are proposed. Minimal zone amendments from Rural to other use, where the use is no longer rural. Extractive resources are continuing to be protected through the current provisions and mapping.

### **5. Strong communities**

The amendment will continue to protect communities, with cultural heritage being added to the strategic framework outcomes, through extensive consultation with the local Aboriginal community representatives. The inclusion of Local Plans for both Bowen and Airlie Beach support the local commercial growth of some of the Regions focal points.

### **6. Strong economy**

The Planning Scheme continues to support and encourage our diverse economic development and population growth through appropriate zones, and the strategic framework. Amendments to support the economy through the introduction of new codes for Rural Tourism, to encourage businesses that support both tourism and agriculture in rural areas. A Renewable Energy

Facilities Code, to support the direction of renewable energies, such as solar farms, while protecting good quality agricultural land and scenic corridors for tourism. Opportunities are also available for tourism through the renewable energies. Amendments have been made to the Dwelling house code to delete confusing provisions against the QDC and ensure a more streamlined approach for our construction industry.

## **7. Managing growth**

Council's growth patterns have been determined by the Urban Growth Study in 2014 commissioned by the Whitsunday Council to assist the developing of the then draft Planning Scheme. There have been no major amendments to the future growth areas. There have been small zone amendments from Rural to Rural Residential in scattered formations throughout the Region, responding to development approvals. The proposed Emerging Communities zones are still applicable and sufficient for each area to support future urban growth.

## **8. Urban form**

Affordable housing has been added to the strategic framework of the Planning Scheme, however amendments to the Planning Scheme to further address affordable housing will be completed in the future. Amendments to the Dwelling house code recommend houses be built to better align with tropical design principles to respond to the north/central Queensland climate.

## **9. Infrastructure**

There have been no amendments to the Infrastructure codes, however the overlays have been updated in accordance with the SPP guidance material and up to date mapping. The Planning Scheme Amendment to include the Local Government Infrastructure Plan (Part 4 and Schedule 3) commenced on 29 June 2018. Our nominated settlement patterns have been reflected in the LGIP to ensure cost effective and efficient infrastructure services.

## **10. Transport**

Updates have been made to the Transport and parking code to align with SPP Guidance and local interests, including car parking rates and cross utilization, and adopting end of trip facilities in certain developments. The mapping for Transport Infrastructure has been updated to accord with State mapping, ensuring compact urban form is maintained, supporting efficient transport for the Region. There are strict requirements for building near transport corridors for protection and efficient management.

## **Conclusion**

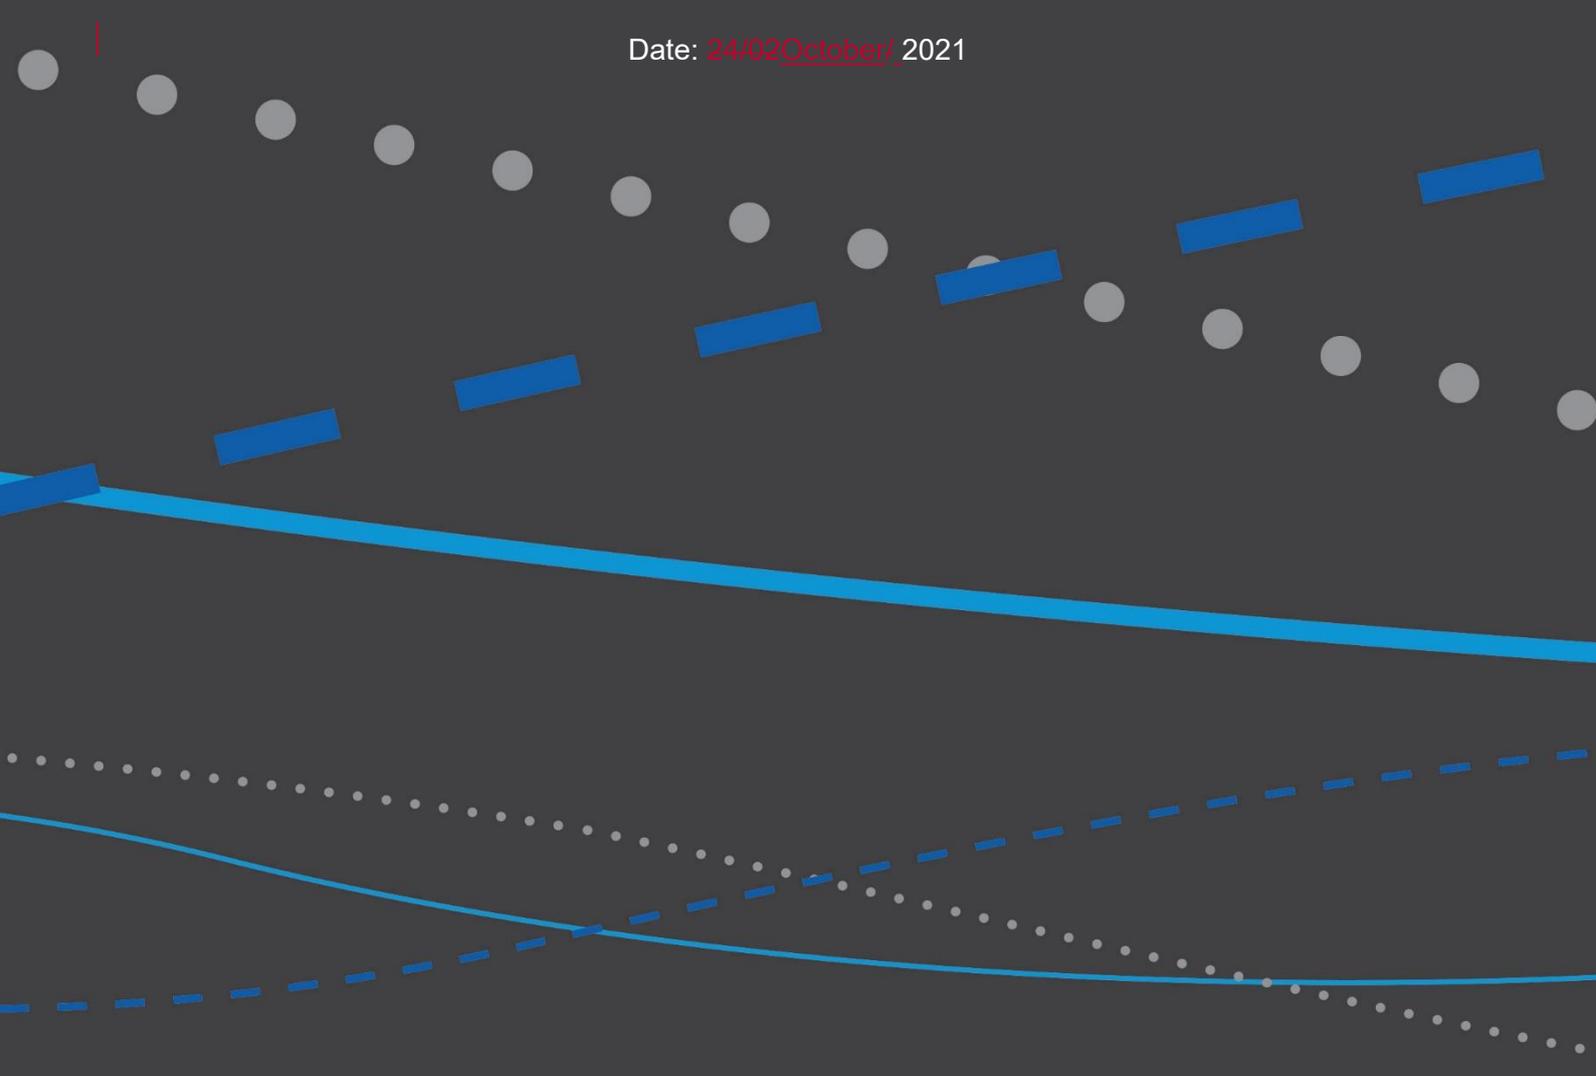

The Whitsunday Planning Scheme continues to meet the balance of a progressive Region while appreciating the natural environment. The Planning Scheme enhances the diversity in the Region through the Strategic Framework, funneling down to the Zones and new Local Plans, where local requirements are needed to keep a sense of place, due to each town being so diverse. Most hazards overlays and codes have been updated, to ensure the best information is available for appropriate and sustainable development.

## 1. Introduction

### 1.1 Background

Whitsunday Regional Council commenced the *Whitsunday Planning Scheme 2017* (Planning Scheme) on 30 June 2017 with the intention of investigating future amendments in response to:

- Submissions from the 2015 and 2016 Planning Scheme public consultation period;
- Conditions of approval from the Department of State Development, Manufacturing, Infrastructure and Planning (DSDMIP) State interest review;
- State Planning Policy 2017 amendments;
- Council strategic documents, such as the *Economic Development Strategy 2017 - 2021*;
- Comments from Development Assessment and Engineering branches; and
- Other general improvements to readability and functionality.

### 1.2 Purpose and Aim of the Community Engagement Plan

This Community Engagement Plan (Plan) is a mandatory requirement for making or amending a Planning Scheme under the *Planning Act 2016*. The Plan seeks to address the following aspects for the Planning Scheme Major Amendment and Administrative Local Government Infrastructure Plan (LGIP) Amendment:

- Legislative requirements in accordance with the *Ministers Guidelines and Rules 2020*, Chapter 2, Part 4 (Major Amendment) and Chapter 5, Part 1 (Administrative LGIP Amendment);
- Amendment preparation and risk management;
- Key messages for each consultation stage;
- Government stakeholder consultation (relevant State agencies) and Non-government stakeholder consultation;
  - Communication protocols (covering communication with both internal and external stakeholders);
  - Appropriate communication tools (including approved protocols and timing);
- Community engagement program and timelines;
- Submission evaluation and reporting requirements; and
- Examples of communication material.

This Communication strategy has been modelled upon guidance from the Minister's *Community Engagement Toolkit 2017*. Once adopted by Council and approved by the Minister, public consultation must be completed in accordance with this Plan.

### 1.3 Communication objectives

Open and transparent communication and stakeholder management plays a key role in enabling Council to engage effectively with the public. The key objectives of this Plan are to:

- Define consultation efforts, timelines and strategies for each stage of the Major Amendment and Administrative LGIP Amendment, including preparation, consultation and post-consultation;
- Create an inclusive consultation period that encourages the community and residents to engage with Council staff in a constructive manner;
- Set out key messages and consultation materials to build the communities capacity to understand proposed amendments and encourage engagement; and

- Capture knowledge for refinements to proposed amendments and all aspects of the Planning Scheme to make better decisions about planning and development.

## 1.4 Communication Principles

To develop an effective Plan a number of key communication principles have been developed. These principles, summarised in **Table 1** below, will assist in guiding the preparation and implementation of community engagement across the Region.

Table 1: Summary of Communication Principles to guide Major Amendment and Administrative LGIP Amendment public consultation.

| Principles                                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1. Integrity and transparency</b> – Engagement involves trust and transparency. Council will carefully consider and accurately portray the community’s role in decision-making and will ensure staff are aware of the scope of their influence on the decisions made.                     |
| <b>2. Respect</b> – Council will facilitate a safe and respectful consultation environment that values individual opinions and input. Council values the contributions made and time given and will facilitate consultation processes that respect all participants and their contributions. |
| <b>3. Inclusive</b> – Council will use a range of opportunities and techniques to encourage the participation and awareness of all people who may be affected by the outcome of this process.                                                                                                |
| <b>4. Informative</b> – Effective engagement will ensure all parties understand the relevant legal, statutory, strategic and local context of this project and the process being undertaken.                                                                                                 |
| <b>5. Well planned</b> – Engagement requires informed judgement and planning in its approach and implementation in order to be effective, practical and suitably resourced.                                                                                                                  |
| <b>6. Meaningful</b> – The community will have opportunities to participate in engagement processes in relation to project constraints, the scope of influence, and Council’s decision-making process.                                                                                       |
| <b>7. Closing the loop</b> – Providing feedback is important in maintaining an open and transparent process. Council needs to ensure the community understand the reasons for the final decision.                                                                                            |

## 2. Statutory Consultation Requirements

### 2.1 Consultation Timeline

The *Ministers Guidelines and Rules 2020*, Chapter 2, Part 4, defines the mandatory consultation timeline for a Major Amendment. No consultation requirement exists for an Administrative LGIP Amendment, although it will be advertised alongside the Major Amendment:

Table 2: Statutory consultation requirements.

| Step                               | Description                                                                                                                                            | Undertaken by                     | Estimated timeframe (business days) |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|-------------------------------------|
| <b>1. Planning and preparation</b> | Decide to make a major amendment and give the proposed amendment to the Minister for State Interest Review (no early confirmation of state interests). | Whitsunday Regional Council (WRC) | (October 2017 – March 2021)         |
| <b>2. State Interest Review</b>    | Undertake State Interest Review.                                                                                                                       | Minister                          | Max. 60 b.d. (excluding pauses)     |

|                                                                        |                                                                                                                                                                                                                                                                                                       |            |                                                                                                                                                                                            |
|------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                        |                                                                                                                                                                                                                                                                                                       |            | (March 2021 – <del>June-December</del> 2021)                                                                                                                                               |
| <b>3. Public consultation &amp; Submission analysis *</b>              | Undertake 20 b.d. public consultation, assess submissions, make amendments (if necessary*) and lodge proposed amendment to the Minister for adoption.                                                                                                                                                 | WRC        | Min. 20 b.d. public consultation ( <del>June – July</del> <u>February - March 2022</u> )<br>Approx. 30 b.d. for analysis and adoption ( <del>July – August</del> <u>April - May 2022</u> ) |
| <b>4. Minister's consideration</b>                                     | Consider the proposed amendment and give a notice advising if the proposed amendment may be adopted <b>OR</b> :<br><u>Minister may consider changes to the Planning Scheme is significantly different from original before Public Consultation and request a second round of Public Consultation.</u> | Minister   | Max. 40 b.d. ( <del>Aug-Oct</del> <u>June - August 2022</u> )                                                                                                                              |
| <b>5. 2<sup>nd</sup> Public consultation &amp; Submission analysis</b> | <u>Undertake 20 b.d. public consultation, assess submissions, make amendments (if necessary*) and lodge proposed amendment to the Minister for adoption.</u>                                                                                                                                          | <u>WRC</u> | <u>Min. 20 b.d. public consultation (only if required)</u><br><u>Approx. 30 b.d. for analysis and adoption (only if required)</u>                                                          |
| <b>5-6. Adoption</b>                                                   | Decide to adopt the proposed amendment and give public notice of the adoption.                                                                                                                                                                                                                        | WRC        | Estimated 30 b.d. ( <u>only if required</u> )( <del>Oct - Dec 2021</del> )                                                                                                                 |
| <b>6-7. Copy to chief executive</b>                                    | Give a copy of the amendment to the chief executive.                                                                                                                                                                                                                                                  | WRC        | Max. 10 b.d. ( <del>December 2021</del> <u>October 2022</u> )                                                                                                                              |
| <b>Total</b><br>(excluding preparation)                                |                                                                                                                                                                                                                                                                                                       |            | 190 b.d.                                                                                                                                                                                   |

\*Where non-administrative amendments are required after Public consultation at Step 3, WRC will be required to return to Step 2 – State interest review, restarting the 190 b.d. process. Given amendments are likely to be minor in nature, a second State interest review will likely be a shorter timeframe than 60b.d, focusing only on amendments consultation.

### 2.1 *Ministers Guidelines and Rules 2020 - Significantly Different Assessment*

If required to make changes to the Planning Scheme Major Amendment following public consultation. Council will include a statement in a letter to the Minister requesting to adopt the Planning Scheme, whether it considers any proposed amendment is *significantly different* from the version for which public consultation has been undertaken. The statement will include reasons why Council formed this view, in accordance with Chapter 2, Part 4, Section 21.3 of *Ministers Guidelines and Rules 2020*. What is considered *significantly different* is defined by Schedule 2 of *Ministers Guidelines and Rules 2020*.

### 3. Stakeholder Identification

#### 3.1 Level of stakeholder participation

To ensure the best results from this engagement process, a series of participation levels has been determined, based on the International Association of Public Participation (IAP2) guidelines.

Table 3: IAP2 Public Participation Spectrum.

|                           |                       | INCREASING IMPACT ON THE DECISION                                      |                                                                                                                                                                                                      |                                                                                                                                                                                           |                                                                                                                                                          |                                                            |

|                           |                       | INFORM                                                                                                                                                   | CONSULT                                                                                                                                                                                              | INVOLVE                                                                                                                                                                                   | COLLABORATE                                                                                                                                              | EMPOWER                                                    |
| PUBLIC PARTICIPATION GOAL |                       | To provide the public with balanced and objective information to assist them in understanding the problem, alternatives, opportunities and/or solutions. | To obtain public feedback on analysis, alternatives and/or decisions.                                                                                                                                | To work directly with the public throughout the process to ensure that public concerns and aspirations are consistently understood and considered.                                        | To partner with the public in each aspect of the decision including the development of alternatives and the identification of the preferred solution.    | To place final decision making in the hands of the public. |
|                           | PROMISE TO THE PUBLIC | We will keep you informed.                                                                                                                               | We will keep you informed, listen to and acknowledge concerns and aspirations, and provide feedback on how public input influenced the decision. We will seek your feedback on drafts and proposals. | We will work with you to ensure that your concerns and aspirations are directly reflected in the alternatives developed and provide feedback on how public input influenced the decision. | We will work together with you to formulate solutions and incorporate your advice and recommendations into the decisions to the maximum extent possible. | We will implement what you decide.                         |

Based on the levels of engagement, outlined in **Table 3**, within the Major Amendment and Administrative LGIP Amendment, Council will:

- **Involve** major stakeholders in key amendments;
- **Inform** the public on the nature of the changes; and
- **Consult** to obtain feedback on the proposed changes.

#### 3.2 Stakeholder analysis

A summary of potential stakeholders has been developed in **Table 4** below. This Table also demonstrates the level of consultation best suited to each stakeholder group, based upon impacts of amendments on each group, level of interest and the stakeholders likely influence.

Table 4: Project stakeholders and level of consultation.

| Stakeholder Category         | Level of consultation and timing                                                                                |

#### 4. Consultation Context

The first round of public consultation for the Planning Scheme occurred between 21 August 2015 to 16 October 2015, with 693 submissions lodged referencing topic, such as:

- Building heights in Airlie Beach;
- Zone amendment requests;
- Bowen Marina activation; and
- Rural residential lot sizes.

Various zone amendment requests were made in response to this consultation period and building heights in Airlie Beach were reduced for the second round of consultation.

The second round of public consultation for the Planning Scheme occurred between 29 August to 14 October 2016, with 128 submissions lodged referencing topics, such as:

Predominant topics included:

- Building heights in Airlie Beach;
- Population growth in Airlie Beach;
- More building design elements and urban design focus within Airlie Beach;
- Zone amendment requests;
- More Mixed-use zones in Bowen Marina;
- Low-medium residential zone minimum lot sizes objected to for being too small; and
- Improved environmental protections.

Outcomes from the consultation helped inform amendments to be consulted upon within the Major Amendment and Administrative LGIP Amendment, including:

- Zone amendment requests;
- Airlie Beach Local Plan;
- Bowen Local Plan;
- Dwelling house design outcomes to mitigate the proliferation of liveable sheds or large sheds that impact upon residential amenity;
- ~~Tighter amenity controls on Short-term accommodation in Residential zones;~~
- Outcomes to protect scenic road corridors from undesirable development;
- Renewable energy code to guide renewable energy development;
- Various amendments to the Strategic Framework regarding tourism development; and
- Improved environmental protections through the introduction of the Healthy Waters Code and the consolidation of Waterways and Wetlands code and Environmental Significance Code into a single Biodiversity, Waterways and Wetlands Code.

Region-wide and area specific consultation material outlined within **Section 6 – Action plan**, will seek to engage the community to understand amendments made in response to submissions from 2016, appreciate the purpose and intention behind amendments and focus on relevant priorities for each local area.

## 5. Communication risks

A communication risk or issue is any aspect, impact or result of a project that has potential to raise concerns or objections from stakeholders and adversely affect the progress and/or reputation of Council.

The risks identified in

**Table 5** provide a breakdown of communication and consultation process risks that must be mitigated to achieve the objectives of the Plan.

DRAFT

Table 5 – Major amendment and Administrative LGIP amendment communication risks.

| Communication / Process risks                                                                                                                                                  | Level of impact (high, medium, low) | Risk management measure                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| If following public consultation changes must be made to the Major Amendment, the lengthy process must restart at State Interest Review, adding up to 190 b.d. to the process. | High                                | Non-mandatory informal pre-consultation will be conducted with key Government stakeholders for significant components, such as the Airlie Beach Local Plan, Bowen Local Plan, hazard mapping and zone amendments that have potential to conflict with State Interests. Pre-consultation tools are set out in more detail within <b>Section 7</b> .                                                                                 |
| Concerns regarding the length of time it has taken to respond to submissions and the length of the amendment process.                                                          | High                                | Key messaging and fact sheets will outline the volume of content prepared for the Major Amendment process in response to 2016 submissions and a timeline of the necessary steps legislated by the State Government for a Major Amendment.                                                                                                                                                                                          |
| Stakeholders perceiving that their views are not being heard.                                                                                                                  | High                                | Amendments made in response to 2016 submissions on the Planning Scheme will be communicated to stakeholders. All efforts will be made to identify and notify by email interested stakeholders, who may be affected by the proposed amendments to ensure that they engage in the consultation process.                                                                                                                              |
| Objection to building heights and re-iterating Airlie Beach anti-growth statements that were common within previous consultations.                                             | High                                | Fact sheets and consultation efforts surrounding the Airlie Beach Local Plan will explain the vision of the plan and the balance it seeks to strike in maintaining the unique sense of place and sense of community whilst promoting growth in the tourism industry. The fact sheet will also highlight that building heights in Airlie Beach will not be increased as a result of the Major Amendment or Airlie Beach Local Plan. |
| Concern that particular aspects have not been included within the Airlie Beach Local Plan despite being raised by submissions.                                                 | Medium                              |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Public being unclear on what the Planning Scheme and the Planning Scheme Major Amendment or Administrative LGIP Amendment is.                                                  | Medium                              | Key messages and fact sheets will seek to explain the role of the Planning Scheme, the nature of the amendments in the context of previous Planning Scheme consultations, responses to local issues, and amendments to support economic growth, hazard resilience and improve environmental protections.                                                                                                                           |
| Query how Council has responded to issues raised by Planning Scheme consultation submissions from 2016.                                                                        | Medium                              | Key messages and fact sheets will identify major issues identified during the 2016 consultation and provide an overview of amendments made in response to submissions.                                                                                                                                                                                                                                                             |
| Objections to individual zone amendment requests from 2016 consultation being refused.                                                                                         | Medium                              | Frequently asked questions (FAQs) explaining amendments made in response to consultation will include an explanation that zone amendments refused by Council were based upon sound planning grounds. Individual land owners whose zoning was not amended will receive a tailored                                                                                                                                                   |

|                                                                                                               |        |                                                                                                                                                                                                                                        |
|---------------------------------------------------------------------------------------------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                               |        | letter with reference to the justification for why zoning was not amended.                                                                                                                                                             |
| Objections to individual zone amendment requests from 2016 consultation that have been changed.               | Medium | The owner of a lot whose zone was amended and residents neighbouring the premises will be notified by mail to alert them of the proposed zone amendment to ensure they are aware and have the opportunity for comment in consultation. |
| Concerns over Flood hazard mapping identifying medium and high-risk areas on a premise, limiting development. | Medium | Online mapping will enable the community to engage and understand hazard mapping, whilst Fact sheets outlining what the mapping means in terms of outcomes from the code will be created to improve understanding.                     |
| COVID-19 restrictions may impact on Officers ability to carry out certain actions in this Plan.               | Medium | All face-to-face interactions will observe current COVID-19 restrictions in place at the time and this Plan may be amended to respond to current conditions.                                                                           |

## 6. Communication Strategy

### 6.1 Communication Management

#### 6.1.1. Internal Communication Tools

The following engagement tools will be used to facilitate effective communication with Council's internal stakeholders and manage potential issues:

- Email/phone;
- Meetings/briefings;
- Progress reports; and
- Project meetings.

#### 6.1.2. External Communication Tools

The following engagement tools may be used to facilitate effective communication of proposed amendments and key messages with external stakeholders, as well as assisting the continued development of the consultation process. Details of each communication tool are elaborated on in the sections below:

Table 6: Mandatory and non-mandatory consultation tools to be utilised.

| Mandatory consultation tools                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Non-mandatory consultation tools                                                                                                                                                                                                                                                                            |

|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|

#### 6.1.2.1. Your Say Whitsunday website (mandatory)

Your Say Whitsunday will be utilised as a central consultation hub that provides an avenue for the community to view amendments, public notices, up-coming consultation activities, consultation timelines, key messages, fact sheets and lodge submissions on the proposed amendments.

This consultation hub will also feature links to Council's online mapping system, enabling users to view all amended Planning Scheme mapping layers in a simple to use format, encouraging understanding and engagement. Proposed amendments will be placed online within a workspace, to enable the community to identify how proposed zone or overlay amendments may affect their premises.

#### 6.1.2.2. Our Whitsunday community update - Newspaper advertisement (mandatory)

Advertisements within local newspapers will be utilised to inform residents of the launch and closure of formal public consultation periods. Paid advertisements will ensure that the full spectrum of the community is made aware of Planning Scheme consultations. A sample of the proposed newspaper advertisements created in accordance with Schedule 4 of the *Ministers Guidelines and Rules 2020* are attached in **Appendix C**.

Table 7: Major amendment and Administrative LGIP Amendment consultation.

| Newspaper                  | Date          |                    |
|----------------------------|---------------|--------------------|
| Whitsunday News            | Wednesday TBD | Consultation Start |
| Mackay and Whitsunday Life | Friday TBD    |                    |
| Whitsunday News            | Wednesday TBD | Consultation End   |
| Mackay and Whitsunday Life | Friday TBD    |                    |

#### 6.1.2.3. Council offices displays (mandatory)

At Council offices and libraries in Collinsville, Airlie Beach, Proserpine and Bowen, consultation material will be displayed in a visible area, including:

- Public notices as published within Newspapers;
- The Planning Scheme amendment in hard copy or available on laptop;
- Online mapping available on laptop;
- Explanatory material, such as fact sheets; and
- Submission templates and receival boxes.

#### 6.1.2.4. Submission Analysis Report (mandatory)

At completion of public consultation, Council will receive a Submission Analysis Report providing an overview of key themes within the consultation period and recommended responses to individual submissions. Council will mail or email submitters to notify them of the public release of the report and how to view the response to their submission.

#### 6.1.2.5. Gazettal (mandatory)

Following public consultation and Minister approval to adopt the proposed amendment, Council will notify the community of the adoption and commencement of the proposed amendment within the Queensland Gazette.

#### 6.1.2.6. Pre-consultation meetings with Government agencies and key stakeholders

For stakeholders with significant interest in proposed amendments, both Government and non-Government, Council will conduct workshops during the preparation phase of the amendment to capture knowledge and gain a common understanding from relevant stakeholders for proposed amendments.

**Table 8** outlines workshops already completed for the Major Amendment and Administrative LGIP Amendment.

Table 8: Pre-consultation activities with Government agencies and Non-government key stakeholders

| Amendment                                                            | Stakeholder                                                                                                                                                             | Method                                                            |
|----------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|
| Airlie Beach Local Plan                                              | Department Transport and Main Roads (DTMR).                                                                                                                             | Pre-consultation meeting (complete)                               |
| Acid sulfate soil mapping refinement                                 | Department Natural Resources, Mines and Energy (DNRME)                                                                                                                  | Meeting, emails and pre-consultation workshop (complete)          |
| State land zone amendment to reflect Reserve purpose                 | DNRME                                                                                                                                                                   | Email, phone discussions and pre-consultation workshop (complete) |
| Zone amendment involving areas of Environmental significance         | DNRME                                                                                                                                                                   | Email, phone discussions and pre-consultation workshop (complete) |
| Inclusion of Aboriginal Cultural Heritage within Strategic Framework | - Juru Enterprises<br>- Birriah Aboriginal Corporation;<br>- Proserpine Indigenous Reference Group;<br>- Jangga Operations; and<br>- Traditional Owner Reference Group. | Planning Scheme preparation workshops (complete)                  |
| All other significant amendments                                     | DSDMIP                                                                                                                                                                  | Emails and pre-state interest review meetings                     |

#### 6.1.2.7. Fact sheets

Fact sheets including FAQs and infographics will be utilised to communicate key messages in a manner that focuses the consultation upon the objectives of this Plan. These fact sheets may also be utilised for handouts and social media postings to build awareness of the consultation and key messages. Fact sheets, to be developed closer to the consultation period, will include:

Table 9: Fact sheets to be developed to improve community understanding of components within the Major amendment and Administrative LGIP amendment.

| Fact sheet            | Content                                                                                            |
|-----------------------|----------------------------------------------------------------------------------------------------|

|                                                                              |                                                                                                                                                                                                               |
|------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                              | <ul style="list-style-type: none"> <li>• Amendments made in response to submissions;</li> <li>• How to make a submission; and</li> <li>• Key amendments relevant to priorities of each local area.</li> </ul> |
| Frequently asked questions (FAQs)                                            | Communication of key messages and response to expected community concerns.                                                                                                                                    |
| Airlie Beach Local Plan                                                      | Overview of vision and intent within the Airlie Beach Local Plan.                                                                                                                                             |
| Bowen Local Plan                                                             | Overview of vision and intent within the Bowen Local Plan.                                                                                                                                                    |
| Flood and Storm surge                                                        | Overview of flood risk mapping, storm surge mapping and refinements to the respective overlay codes.                                                                                                          |
| Rural tourism                                                                | Communicate market opportunities for Nature-based and Agri-tourism within the Region.                                                                                                                         |
| Short-term accommodation in residential areas                                | Outline Short-term accommodation in residential areas policy position and amenity controls.                                                                                                                   |
| Environmental changes                                                        | Overview of codes for Biodiversity, waterways and wetlands and the Healthy waters code.                                                                                                                       |
| Landslide overlay map                                                        | Mapping for the Region to reduce red tape for development.                                                                                                                                                    |
| Acid sulfate soils overlay map                                               |                                                                                                                                                                                                               |
| Renewable energy                                                             | Levels of assessment and provisions guiding renewable energy development.                                                                                                                                     |
| Shed houses and residential amenity                                          | Dwelling house design provisions to mitigate impacts of liveable sheds on residential amenity.                                                                                                                |
| Zone fact sheets, Material change of use and Reconfiguring a lot fact sheets | Utilise fact sheets for zones and development types to assist community understanding of the Planning Scheme.                                                                                                 |

#### 6.1.2.8. Social media postings

Social media postings may be used at key points in the consultation process to educate, encourage participation, outline consultation activities and provide feedback to stakeholders on the outcomes of these activities. All media enquiries will be directed through Council's Communications and Marketing Manager. All other enquiries will be directed to Council's Director of Development Services.

#### 6.1.2.9. Consultation – Meet a planner

In an effort to raise awareness and engagement from the community, meet a planner opportunities will be available at each customer service centre, throughout the consultation period as outlined by the **Table 10** below.

**Note: All face-to-face interactions will observe current COVID-19 restrictions in place at the time and may affect the ability of officers to carry out some consultation methods.**

Table 10: Meet a planner opportunity at local customer service centres.

| Customer service centre | Week 1    | Week 3    |
|-------------------------|-----------|-----------|
| Bowen                   | Monday    | Wednesday |
| Proserpine              | Tuesday   | Thursday  |
| Cannonvale              | Wednesday | Monday    |
| Collinsville            | Thursday  | Tuesday   |

### 6.1.2.10. Emailing / Mailing key stakeholders

Key stakeholders identified within *Appendix A – List of interested stakeholders* will be notified by mail or email of key amendments proposed within the Planning Scheme prior to the public consultation period beginning.

For landowners adjoining or subject to a proposed zone amendment, Council will notify of the amendment by mail or email. For landowners who requested a zone amendment but were declined on planning grounds, Council will notify of the planning grounds by mail or email.

### 6.1.3. Key messages

Key messaging seeks to respond to core consultation matters identified within **Section 5 – Consultation risks**. The following key messages have been drafted to communicate about the project, and will be updated regularly with new information, as required:

Table 11: Key messages for the Planning Scheme Major Amendment and Administrative LGIP Amendment consultation.

| Theme                                                                                           | Key messages                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What is a Planning Scheme?                                                                      | <ul style="list-style-type: none"> <li>A Planning Scheme manages development within the Region to ensure that it occurs in a manner that does not adversely impact upon the amenity or expectations of a neighbourhood, enables economic development, promotes hazard resilience and preserves areas of natural or cultural significance. The Planning Scheme manages everything from impacts on waterways to the nature and design of development within various zones to ensure the Region as an ecosystem functions effectively and sustainably, in line with the expectations of the community and the State.</li> </ul> |
| What is the Planning Scheme Major Amendment package?                                            | <ul style="list-style-type: none"> <li>The Planning Scheme Major Amendment and Administrative LGIP Amendment is the first significant amendment since the adoption of the Planning Scheme in June 2017. Amendments are proposed in response to submissions identified for further investigation during 2016 consultations, community concerns, updated natural hazard studies, economic development initiatives and general fine tuning following 2 years in operation.</li> </ul>                                                                                                                                           |
| What is an LGIP Administrative Amendment                                                        | <ul style="list-style-type: none"> <li>The LGIP governs major infrastructure planning in the Region. Amendments made to the Planning Scheme in regard to water quality require minor changes to the LGIP to ensure consistency across the documents, albeit, the QLD Government legislates a different process for the Planning Scheme and LGIP. Hence, the title of the amendment specifies an '<i>Administrative LGIP Amendment</i>'.</li> </ul>                                                                                                                                                                           |
| How Council has responded to issues raised by Planning Scheme consultation submissions in 2016. | <ul style="list-style-type: none"> <li>In response to submissions from the 2016 consultation, Council has developed the following amendments: <ul style="list-style-type: none"> <li>Various zone amendments;</li> <li>Addition of the Airlie Beach Local Plan;</li> <li>Addition of the Bowen Local Plan;</li> <li>Residential design controls to mitigate the proliferation of liveable sheds or large sheds that impact upon residential amenity;</li> </ul> </li> </ul>                                                                                                                                                  |

|                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <p>Objection to building heights and re-iterating Airlie Beach anti-growth statements that were common within previous consultations.</p>  | <ul style="list-style-type: none"> <li>● <u>Council received 611 submissions against Airlie Beach building heights during the 2015 consultation and 67 against, 8 in support of the proposed heights and 3 supporting increased building heights during the 2016 consultation. Therefore, it is considered the Planning Scheme has struck correct balance in incentivising development and maintaining the town's character. No changes to building heights are proposed in the Airlie Beach Local Plan Area within the Major Amendment.</u></li> <li>● <del>Council received 611 submissions against Airlie Beach building height in 2015 consultations and 65 submissions in 2016. Therefore, it is considered the Planning Scheme has struck correct balance in incentivising development and maintaining the town's character. No changes to building heights are proposed in the Major Amendment.</del></li> <li>● Provisions within the Airlie Beach Local Plan seek to negate specific community concerns regarding building height, such as wind tunnelling and loss of pedestrian scale, through the building design elements. Building design provisions include vertical landscaping that promotes a tropical sense of place, podiums that reduce the perceived size of built form and laneways to provide view and movement corridors.</li> </ul> |
| <p>Concern that particular aspects have not been included within the Airlie Beach Local Plan despite being raised by many submissions.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p>Stakeholders perceiving that their views are not being heard.</p>                                                                       | <ul style="list-style-type: none"> <li>● Council has responded to predominant themes from the 2016 Planning Scheme consultation with policy changes that respond to submitter concerns. Council wishes to test these proposed changes with stakeholders to ascertain if their previously raised concerns have been met.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <p>Concerns over flood hazard mapping identifying medium and high-risk areas on a premise, limiting development.</p> | <ul style="list-style-type: none"><li>• The Town of Whitsunday Drainage Study has refined Flood hazard mapping between Cannon Valley and Jubilee Pocket. The highly detailed localised study, which takes into consideration projected increases in rainfall intensity at 2100 as a result of climate change, allocates risk areas based upon depth and velocity of flood waters. Risk modelling seeks to ensure the Town is developed resiliently, avoiding intensification within medium or high-risk areas in an effort to reduce the probability of damage to people and property.</li></ul> |

DRAFT

## 7. Action Plan

The public consultation program for the Major Amendment and Administrative LGIP Amendment is identified in **Table 14** below.

Table 12: Major Amendment and Administrative LGIP amendment Consultation Strategy.

| Stage                              | Actions                                                                                                                                                                                                                                                             | Target Stakeholders                                                  | Consultation tool                                                                                                                                                                                                   |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Stage 1 - Planning and Endorsement | Meet with key Government stakeholders in relation to key amendments.                                                                                                                                                                                                | DSDMIP, DNRME, DTMR                                                  | Pre-consultation workshops and meetings.                                                                                                                                                                            |
|                                    | Gain endorsement from relevant State agencies regarding the concept of proposed amendments.                                                                                                                                                                         |                                                                      |                                                                                                                                                                                                                     |
|                                    | Adopt each proposed amendment by Council resolution, for inclusion into the Major amendment package.                                                                                                                                                                | WRC Managers, Council Executive, Councillors and Communications team | Pre-consultation workshops and meetings.                                                                                                                                                                            |
|                                    | Adopt consultation plan, key messages and associated material guiding Major Amendment and Administrative LGIP Amendment consultations.                                                                                                                              |                                                                      | Council briefing/meeting.                                                                                                                                                                                           |
| Stage 2 - Preparation              | Notify DSDMIP of Council's decision to amend the Planning Scheme in accordance with the <i>Ministers Guidelines and Rules 2020</i> , Chapter 2, Part 4, including all 'required material' defined by Schedule 3 of the <i>Ministers Guidelines and Rules 2020</i> . | DSDMIP                                                               | Email.                                                                                                                                                                                                              |
|                                    | Prepare all consultation material and fact sheets based upon approved key messages.                                                                                                                                                                                 | Key WRC staff                                                        | Internal briefings.                                                                                                                                                                                                 |
|                                    | Provide WRC staff with briefings on proposed amendments, Consultation plan and key messages being used.                                                                                                                                                             |                                                                      | Briefings (Key staff) and Email.                                                                                                                                                                                    |
| Stage 3 - Initiate consultation    | Ensure the Council understands proposed amendments, consultation risks and associated key messages.                                                                                                                                                                 | WRC Councillors                                                      | Councillor Briefing.                                                                                                                                                                                                |
|                                    | Inform WRC communities and key stakeholders of upcoming consultations, purpose of the consultations, where to access relevant information and opportunities available to make a submission.                                                                         | Key stakeholder groups and WRC communities                           | Newspaper advertisements; Fact sheets; Social media posting; Email key stakeholders; Mail landowners affected by zone amendments; Online mapping; Yoursay website; and Amendments & fact sheets at Council offices. |

|                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                |                                                                                                                                                                                                           |

| <p>Optional step – Amendment changes made in response to submissions</p> | <ul style="list-style-type: none"> <li>• Notify stakeholders of proposed changes and intention to undergo further consultation; and</li> <li>• Return to State Interest Review and renew Consultation strategy.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Key stakeholder groups, Councillors, Local industry and WRC Communities</p> | <p>Council Briefing and Meeting; Social media posting; Newspaper advertisements; Yoursay engagement portal; and Consultation Plan.</p>                                                                    |
| <p>Stage 6 - Adopt Amendments</p>                                        | <ul style="list-style-type: none"> <li>• Adopt Major Amendment and Administrative LGIP Amendment;</li> <li>• Begin analysis on key issues identified by submissions for consideration in future amendments;</li> <li>• Notify DSDMIP of adoption; and</li> <li>• Notify community of adoption via Gazette, Newspaper, Facebook post and on Council's website.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>DSDMIP; WRC Communities; Councillors</p>                                    | <p>Council Briefing and Meeting; Social media update; Gazette; and Newspaper.</p>                                                                                                                         |

## 8. Roles and Responsibilities

The project team's roles and responsibilities have been outlined below in **Table 15**:

Table 13: Roles and responsibilities.

| Project Team Role                  | Responsibilities                                                                                                                                             |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Whitsunday Regional Council</b> |                                                                                                                                                              |
| Director Planning and Development  | Provide final approvals for all major external communications during consultation. The Director will act as liaison between Councillors and the Project Team |
| Manager of Strategic Planning      | Assist in the coordination of project deliverables, phases, communications material and act as a key project spokesperson.                                   |
| Communications & Marketing Manager | Manage all media enquiries and issues, which may arise during the project. Approve all media communications and external communications.                     |

## 9. Feedback and Integration

### 9.1 Next steps

Community Engagement materials will now be developed in preparation for the consultation activities ~~to commence in June – July~~, subject to State Interest Review approval.

### 9.2 Feedback

Key Stakeholders and consultation participants will be contacted after the project is completed to advise them of the outcome and confirm their feedback, by distributing a copy of the Consultation Summary by email. The Consultation Summary is a summary document, which outlines the key results of the engagement process and indicates the next steps for the project.

Closing the loop with participants is one of the most important steps of an effective community engagement process. Once the community sees an outcome from the engagement process, they become more engaged and involved in future decision-making.

## 10. Conclusion

This Plan seeks to provide an overview and strategy for public and State agency consultation of the Major Amendment and Administrative LGIP Amendment to the Planning Scheme. The Plan seeks to promote engagement and understanding of the proposed amendments in an effort to enable informed discussion, understanding and submissions on the Planning Scheme. Engagement will be built using tools that promote awareness online, newspapers, but also in person within meet a planner. Key messages, fact sheets and FAQ's respond to the consultation context and key priorities from each Township to ensure that engagement is high.

The proposed Plan is in alignment with the requirements set out within the *Minister's Guidelines and Rules 2020*. Should any changes occur to the proposed amendments following formal consultations that are considered 'significantly different' from what was advertised, a new consultation plan will be prepared to guide an amended public consultation process on proposed amendments.

## Appendix A – List of Interested Stakeholders

### List of Community Stakeholders

Note: an option to unsubscribe from Planning Scheme Amendment consultation updates will be provided within each email update.

Note: Stakeholder list is subject to updates.

## Appendix B – Communication guidelines

### Communication Protocol

The following protocols will be followed throughout each consultation process:

- All media enquiries will be directed through Council's Communications & Marketing Manager and Manager of Strategic Planning;
- All other enquiries will be directed to the Manager of Strategic Planning who will notify the Council's Director of Development Services, if necessary;
- All formal external communication materials will be reviewed and approved by both the Director of Development Services and Communications Manager; and
- All incoming communication to Council from external stakeholders and the responses to these enquiries will be recorded and tracked using Enterprise Content Management (ECM) and Customer Request Management (CRM). Key information to be recorded will include name of person, contact details, query, action required, response and any other comments required.

### Recording Informal and Formal Correspondence

When Council receives phone calls or front counter enquires, the following process is to be undertaken for CRMs:

1. Any contact with Customer Service Centres that can be recorded as a CRM will be recorded (i.e. phone calls, front counter enquiry);
2. All CRMs for the Major Amendment and Administrative LGIP Amendment consultations will be allocated to ECM;
3. CRMs will initially be tasked to Strategic Planning Administration who will then allocate enquiries to a Project Manager within the Strategic Planning Branch;
4. If there are questions about the Plan that Customer Contact can address, the task will be closed out by this team. Key talking points will be provided to Customer Contact for use;
5. As much detail as possible will be recorded to ensure quality of information; and
6. A report will be run of all CRMs to allow for registration to ECM.

When Council receives written correspondence via [submissions@whitsundayrc.qld.gov.au](mailto:submissions@whitsundayrc.qld.gov.au) or [yoursay.whitsundayrc.qld.gov.au](mailto:yoursay.whitsundayrc.qld.gov.au)

1. Submissions to [yoursay.whitsundayrc.qld.gov.au](mailto:yoursay.whitsundayrc.qld.gov.au) are automatically forwarded to [submissions@whitsundayrc.qld.gov.au](mailto:submissions@whitsundayrc.qld.gov.au);
2. All submissions for the Major Amendment and Administrative LGIP Amendment consultation will be allocated to ECM;
3. Strategic Planning ADMIN: once registered, move into "Registered – [Officer] – Draft" folder in email;
4. Strategic Planning ADMIN: enter Submitter details into the submissions database to create the new user;
5. Strategic Planning ADMIN: once email is assigned to an officer and details are entered into the submissions database, forward the email to the allocated officer for actioning;
6. Strategic Planning OFFICER: enter submission into the submissions database and assign issue;
7. Strategic Planning OFFICER: populate the details/create response; and
8. Strategic Planning ADMIN: Export file into formal Submission analysis report.

When Council receives written correspondence by post, the following process will be undertaken for ECM:

1. Any written correspondence is to be registered to the relevant Strategic Planning consultation folder by Records;

2. Tasks will be added to the Planning task list;
3. Planning Administration will allocate any consultation related tasks to the Strategic Planning team to action; and
4. All responses to any incoming enquiries or submissions will be recorded to ECM via registration.

**Consultation start ##DATE ##**

### **WHITSUNDAY PLANNING SCHEME 2017 MAJOR AMENDMENT AND ADMINISTRATIVE LOCAL GOVERNMENT INFRASTRUCTURE PLAN AMENDMENT CONSULTATION START**

**Whitsunday Regional Council is seeking public comment on the Major Amendment and Administrative Local Government Infrastructure Plan Amendment (LGIP) of the Whitsunday Planning Scheme 2017 from xx Date xx – xx Date xx.**

The Major Amendment and Administrative LGIP Amendment to the Planning Scheme has the following purpose and general effect relating to the entire local government area:

- Inclusion of the Bowen Local Plan;
- Inclusion of the Airlie Beach Local Plan;
- Inclusion of Biodiversity, Waterways and Wetlands Overlay Code and Mapping to replace the Environmental Significance Overlay Codes and Mapping, and the Waterways and Wetlands Overlay Codes and Mapping;
- Amendments to the Heritage Overlay Code and Mapping;
- Various Zoning Amendments throughout the Region;
- Regulation of urban sheds;
- Inclusion of Healthy Waters Code and subsequent Stormwater Management Planning Scheme Policy;
- Inclusion of trade waste requirements;
- Amendments to the Reconfiguring a Lot Code;
- Amendments to the Bushfire Overlay Code and Mapping;
- Amendments to the Strategic Framework including incorporation of Cultural Heritage;
- Amendments to the Dwelling House and Dual Occupancy Code;
- Inclusion of a Renewable Energy Code;
- Amendments to the Landslide Overlay Code and Mapping;
- Amendments to the Acid Sulfate Soils Code and Mapping;
- Amendments to the Coastal Overlay Codes and Mapping;
- Amendments to the Flood Overlay Codes and Mapping;
- Inclusion of a Building Heights Overlay Code and Mapping to replace the Building Works Table of Assessment;
- Inclusion of requirements for Short-Term Accommodation in the Multi Unit Use Code;
- Banning of Party Houses within the Region;

- Inclusion of a Rural Tourism Code;
- Amendments to the Home-Based Business Code;
- Inclusion of a Waste Management Planning Scheme Policy;
- Amendments to the Advertising Devices Code;
- Inclusion of administrative definitions;
- Clarity in levels of assessment in the Tables of Assessment;
- Improved workability of the Overlays in the Tables of Assessment;
- Amendments to the Planning Scheme to achieve compliance with the State Planning Policy;
- Operational works for driveways removed;
- Mapping updates in accordance with the State Planning Policies and Qspatial; and
- Minor amendments throughout the document.

To view the proposed amendments to the Planning Scheme, including supporting fact sheets, how to make a submission instructions and FAQs, please visit Council's consultation website at [Yoursay.whitsundayrc.qld.gov.au](http://Yoursay.whitsundayrc.qld.gov.au) or visit a Council office to view or purchase a copy of the Major and Administrative LGIP Amendment at:

BOWEN  
67 Herbert Street,  
Bowen QLD 4805

COLLINSVILLE  
Cnr. Stanley and Conway Streets,  
Collinsville QLD 4804

CANNONVALE  
Shop 23 Whitsunday Plaza,  
Cannonvale QLD 4802

PROSERPINE  
83 - 85 Main Street,  
Proserpine QLD 4800

To make a submission on any aspect of the amendments, please register and lodge online at [Yoursay.whitsundayrc.qld.gov.au](http://Yoursay.whitsundayrc.qld.gov.au), email Council on [submissions@whitsundayrc.qld.gov.au](mailto:submissions@whitsundayrc.qld.gov.au), deliver by mail to PO Box 104, Proserpine QLD 4800 or deliver in person to Council offices.

A properly made submission may be made by any person, which must be lodged during the public consultation period and include:

- your name;
- residential or business address;
- facts or grounds of the submission;
- postal address or email; and
- your signature.

Enquiries on this matter should be directed to the Strategic Planning Branch on ☎ 07 4945 0263.

|----------|----------------------------------------------------------|-----|-----------------------------|
| From:    | Matthew Barnes, Nicholas Heiner                          | To: | Whitsunday Regional Council |
| Date:    | 12 November 2021                                         | CC: | Scott Hardy                 |
| Subject: | Calculated Erosion Distance Reinterpretation and Mapping |     |                             |

---

## 1 Background

---

Development of the Whitsunday Regional Council (WRC) Coastal Hazard Adaptation Strategy (CHAS) included calculated erosion distance assessments for eight (8) beaches within the local government area, namely:

- Wilson Beach
- Cannonvale Beach
- Conway Beach
- Dingo Beach
- The Cove (Beacons Beach)
- Hideaway Bay
- Airlie Beach
- Queens Beach

The calculated erosion distance outputs at these locations were used to support a coastal hazard risk assessment as part of the CHAS.

WRC wishes to use the calculated erosion distance outputs to support a Planning Scheme amendment. The Department of Environment and Science (DES) advised that the assessments and associated mapping products for the amendment needed to align with the coastal segments defined in the declared Erosion Prone Area plan WHR3A<sup>1</sup> and accurately account for the extent of public seawalls deemed 'fit for purpose' at the locations of interest.

This requires a reinterpretation of the CHAS calculated erosion distance assessment results reported in BMT (2018) with respect to plan WHR3A. It was also identified that the Airlie Beach precinct needed special attention where the coastal segments defined in plan WHR3A did not account for changes to the shoreline associated with reclamation and port and harbour development.

This technical memorandum provides details of the proposed updates to plan WHR3A to reflect the CHAS calculated erosion distance assessments, the location of public seawalls, and changes within the Airlie Beach precinct.

---

<sup>1</sup> [https://www.qld.gov.au/data/assets/pdf\\_file/0027/68742/whitsunday-erosion-prone-area-plan.pdf](https://www.qld.gov.au/data/assets/pdf_file/0027/68742/whitsunday-erosion-prone-area-plan.pdf)

## 2 Calculated Erosion Distance Assessment

---

### 2.1 Summary of CHAS Assessment Results (BMT 2018)

The reassessed calculated erosion distances prepared for the CHAS were presented at beach cross-sections within the eight locations of interest mentioned above. Full details of the assessments are provided in BMT (2018) and a summary of the results are presented below in Table 2-1. Interpretation of these results with respect to plan WHR3A is presented in herein.

Through liaison with WRC and DES, other assumptions regarding appropriate calculated erosion distances throughout the Airlie Beach precinct have been agreed and adopted, including:

- An erosion distance of 0 m for shorelines within sheltered port, harbour and marina areas;
- An erosion distance of 10 m for shoreline with rock revetment (exposed and not within a port, harbour, or marina area);
- An erosion distance of 20 m for small beach sections that were not assessed as part of the CHAS; and
- An erosion distance of 40 m for shorelines with dense mangrove habitat.

### 2.2 Seawall Review

The erosion prone area definition allows for consideration of approved public seawalls assessed as 'fit for purpose', certified and maintained to the approved design by WRC or the State in perpetuity. Seawalls deemed to meet these criteria have been identified in collaboration with WRC and DES. In these locations the calculated erosion distance reduces to either:

- The 'present-day calculated distance' which incorporates the 'short-term' and 'dune slumping' erosion components. This applies to the locations assessed as part of the CHAS.
- 10 m measured landward from the seawall crest. This applies to sections of shoreline with rock revetment throughout the Airlie Beach precinct that were not assessed as part of the CHAS.

In recognising the role of these structures in limiting the landward extent of the erosion hazard the following has been assumed:

- The structure is approved and therefore the design is generally considered to be fit for purpose;
- Arrangements are in place to enable the structure to be maintained in perpetuity by WRC or the State; and
- The structure is maintained to the approved design and the condition is routinely assessed by a suitably qualified person.

WRC supplied a condition assessment for coastal assets to support the seawall review (see Attachment 1). Based on this information, the seawalls assessed by WRC as being in 'good' or 'excellent' condition within the locations reassessed as part of the CHAS are summarised in Table 2-2.

It is noted that other public seawalls in locations not reassessed as part of the CHAS are not considered in this review and update to plan WHR3A.

Table 2-1 Summary of Calculated Erosion Distance Assessment Results (BMT 2018)

| Beach Compartment | Long term recession component | Short term storm erosion component |        | Dune slumping component | Shoreline response to sea level rise<br>S x F (m) |                 | Calculated erosion distance <sup>1</sup><br>E (m) |      |      | Declared EPA Width WHR3A (m) | Notes                                             |
|-------------------|-------------------------------|------------------------------------|--------|-------------------------|---------------------------------------------------|-----------------|---------------------------------------------------|------|------|------------------------------|---------------------------------------------------|
|                   | (N x R) x F (m)               | C1 x F (m)                         | C2 (m) | D (m)                   | 2050 (0.4m SLR)                                   | 2100 (0.8m SLR) | Present-day <sup>2</sup>                          | 2050 | 2100 |                              |                                                   |

| Hideaway Bay      | 14                            | 13                                 | 9      | 2                       | 30                                                | 59              | 23                                                | 67   | 96   | 75                           | possible bedrock                                  |
| Queens Beach      | 28                            | 12                                 | 3      | 2                       | 37                                                | 75              | 17                                                | 82   | 120  | 123 <sup>3</sup>             | public seawall control                            |

<sup>1</sup> The above calculated erosion distances do not consider local erosion controls where present (i.e. bedrock or engineered coastal protection structures). They also do not apply to coastal waterway entrances.

<sup>2</sup> Short term erosion and dune slumping components only

<sup>3</sup> Average for beach compartment

**Table 2-2 Summary of Public Seawalls Considered in the Review of Plan WHR3A**

| Location Name    | Council Reference Name                      | Comment                                                                                             |
|------------------|---------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Wilson Beach     | Wilson Beach Breakwater                     | Rock revetment seawall, 97 m length, good condition. Assessed by WRC on 3/9/2019.                   |
| Conway Beach     | Conway Beach Breakwater                     | Rock revetment seawall, 364 m length, excellent condition. Assessed by WRC on 2/9/2019.             |
| Airlie Beach     | Airlie Creek Seawall Southern Side          | Rock revetment seawall, 195 m length, good condition. Assessed by WRC on 16/10/2019.                |
| Airlie Beach     | Airlie Creek Seawall Northern Side          | Rock revetment seawall, 410 m length, good condition. Assessed by WRC on 16/10/2019.                |
| Airlie Beach     | Broadwater Ave Carpark to Coral Seas Resort | Rock revetment seawall, 203 m length, good condition. Assessed by WRC on 16/10/2019.                |
| Cannonvale Beach | Cannonvale Beach South                      | Stone pitched concrete retaining wall, 242 m length, good condition. Assessed by WRC on 26/09/2019. |
| Queens Beach     | Bowen Golf Club                             | Seebee seawall, 86 m length, excellent condition. Assess by WRC on 27/11/2019.                      |

## 2.3 Updated Coastal Segments

Coastal segments throughout the Airlie Beach precinct defined by plan WHR3A do not account for recent reclamation and port and harbour developments, including the Port of Airlie and Coral Sea Marina (the former Abell Point Marina). New coastal segments have been developed to better characterise the shoreline types throughout Airlie Beach, generally classified as either:

- Port, harbour, or marina
- Rock revetment (exposed and not within a port, harbour, or marina area)
- Sandy beach
- Mangrove habitat
- Bedrock

The coastal segments and shoreline classification for the Airlie Beach precinct and adjacent areas are illustrated in Figure 2-1.

New coastal segments at other locations were also created to account for the seawall structures noted in Table 2-2, namely:

- Wilson Beach
- Conway Beach
- Queens Beach

The coordinates for the new coastal segments have been incorporated with plan WHR3A and are provided in Table 4-1.

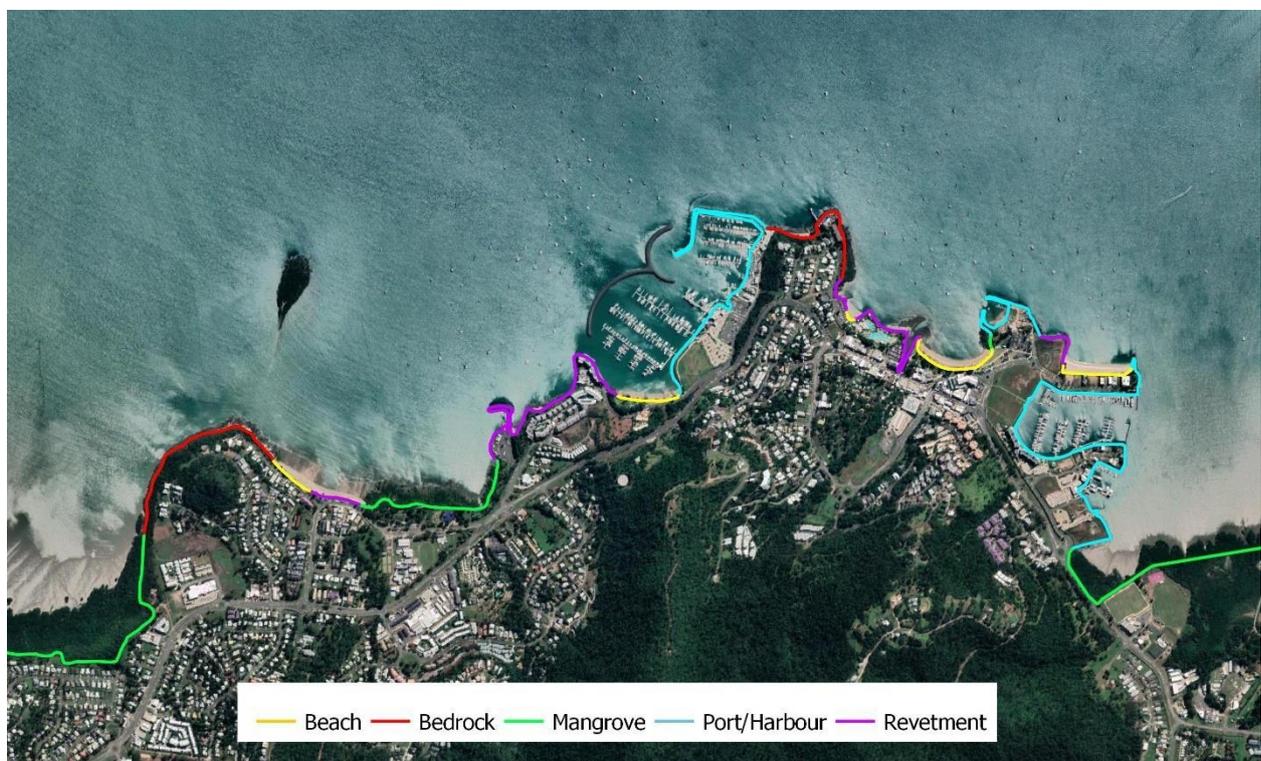

Figure 2-1 Airlie Beach Coastal Segments & Shoreline Classification

### **3 Updates to Plan WHR3A**

---

The proposed updates to plan WHR3A are summarised in Table 4-1, for other coastal segments within the local government area the existing calculated erosion distances are to be retained.

Remapping of the calculated erosion distance has been also completed and provided to WRC in digital format. The calculated erosion distances have been mapped (buffered) from the 'toe of dune' reference developed by DES.

# Whitsunday Planning Scheme 2017 Proposed Major Amendment

## Natural Hazard Risk Assessment

Author: Jonathan Cutting – Strategic Planner  
Version 1: 15/07/2021  
Version 2: 12/11/2021

# 1. Natural Hazard Risk assessment

A 'fit for purpose' risk assessment is required to inform amendments to a planning scheme relating to natural hazards, in alignment with *Guidance for local governments: Integrating state interests in a planning scheme (May 2021)*. To support the *Whitsunday Planning Scheme 2017 Proposed Major amendment*, this risk assessment helps Council and the community understand whether proposed planning amendments are appropriate, given the level of risk posed by the natural hazard. The focus of the risk assessment is to define:

- how Council has considered the outcomes of the risk assessments/hazard studies; and
- how the outcomes have been incorporated into the *Whitsunday Planning Scheme 2017 Proposed Major Amendment* to achieve an acceptable or tolerable level of risk in development.

Natural hazard overlay mapping within the Proposed Major Amendment that is subject to this risk assessment includes:

- Bushfire prone areas;
- Flood hazard areas;
- Landslide hazard areas;
- Storm tide inundation areas; and
- Erosion prone areas.

The aforementioned natural hazard mapping is either informed by State Government hazard assessment or has been locally refined by suitably qualified professionals on behalf of Council, to determine hazard extents and intensity. No land use zone amendments are proposed as a direct result of refined mapping however, associated Overlay Code amendments ensure resilient development by:

- avoiding the risk;
- mitigating the risk with appropriate controls;
- ensuring no worsening of the hazard;
- wherever possible, reducing the existing risk over time; and/or
- removing the hazard.

## 1.1 Bushfire prone areas

Mapping Source:

| Location | Bushfire mapping source                                                      |
|----------|------------------------------------------------------------------------------|
| Region   | <a href="#">QSpatial – Bushfire prone area – Mackay Isaac and Whitsunday</a> |

### Overview of hazard risk mapping amendments

The Planning Scheme's Bushfire Hazard Overlay mapping was sourced from the State Government on QSpatial. Within the Proposed Major Amendment, the mapping has not varied from the current Planning Scheme, with the exception of:

- the removal of small bushfire medium hazard area within Hinschen Street and Anzac Road, Proserpine, following a submission to the Planning Scheme in 2017 from affected lot owners. Council liaised with QFES in 2018 prior to making the amendment (shown Figure 1); and
- the introduction of 'Bushfire Hazard Buffer Area'.

Figure 1: Bushfire Hazard Overlay amendment, current (left) and Proposed Major Amendment (right).

### Planning Scheme integration

State Bushfire prone area mapping was integrated into the Planning Scheme Bushfire Hazard Overlay map as the *best available information*.

The introduction of Bushfire Hazard Buffer Area, a 100m buffer from Bushfire Hazard extents, represented as the *Potential Impact Buffer* within State Planning Policy interactive mapping, was required for information purposes to support building assessment within the Region. The Tables of Assessment do not trigger planning assessment for development within Bushfire Hazard Buffer Area.

Bushfire Hazard Overlay Code amendments were made to align with the Natural Hazards State Planning Policy 2017 and Guidance material, to ensure development:

- avoids the risk;
- mitigates the risk with appropriate controls;
- ensures no worsening of the hazard;
- where possible, reduces the existing risk over time; and/or
- removes the hazard.

## 1.2 Flood hazard areas

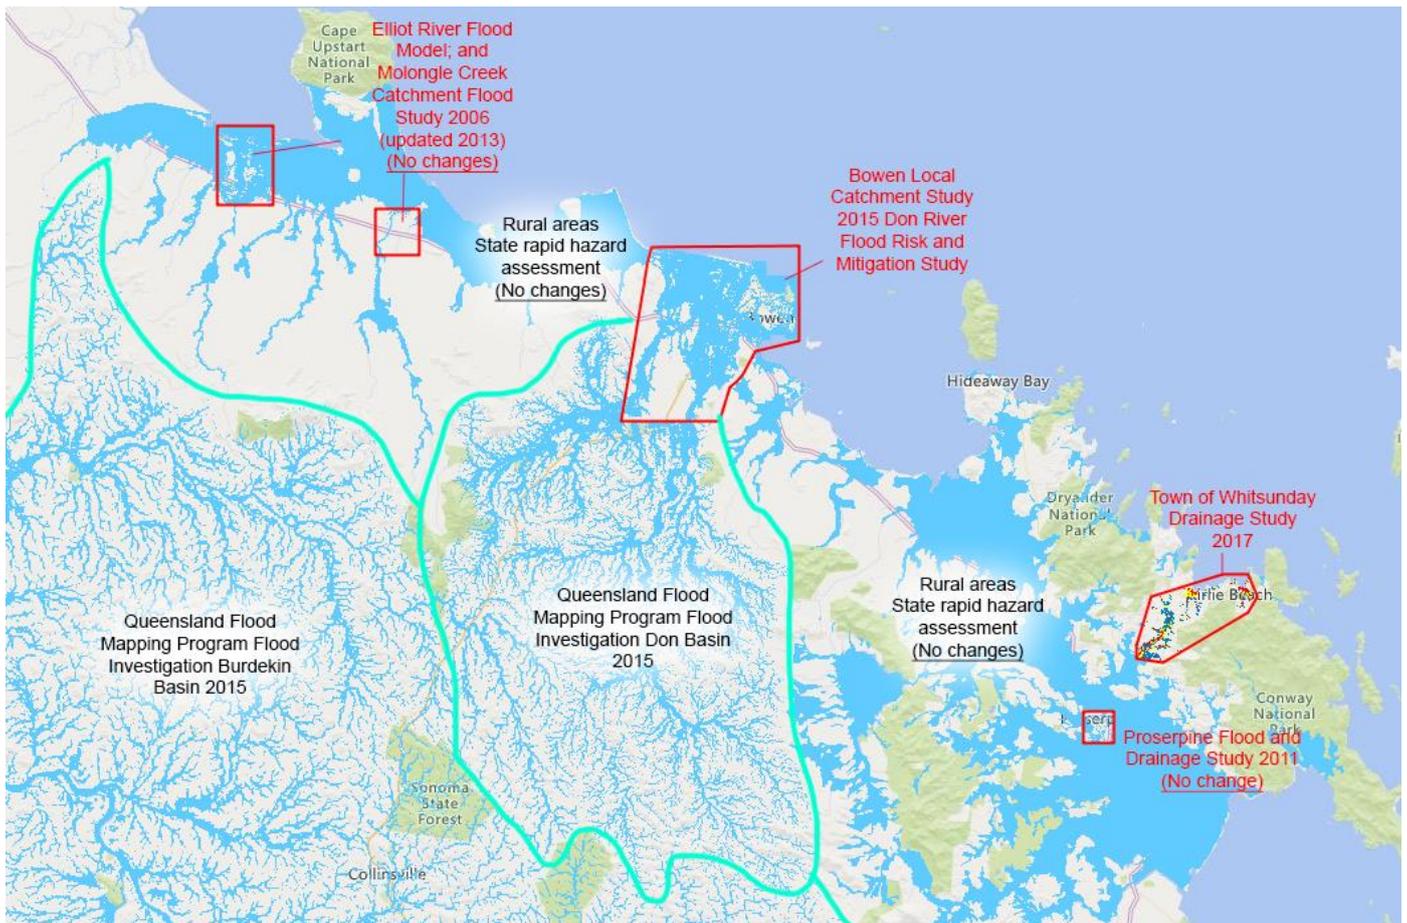

Figure 2: Flood mapping sources within Region.

### Overview of hazard risk mapping amendments

Updated flood mapping (Figure 2) has been informed by refined State Government data sets and suitably qualified consultants experienced in flood modelling. Amendments to flood mapping detailed above identify 1% AEP flood extents and depths, which inform freeboard heights and development layout in accordance with corresponding assessment benchmarks in the Flood Hazard Overlay Code.

The most recently completed Town of Whitsunday Drainage Study 2017 also identified flood velocities. This component enabled the generation of risk mapping in the study area to provide more transparency to the community of flood risk and forms of acceptable development within each risk area. Risk mapping was defined using flood depth and velocity, in accordance with recommendations within the Study by BMT WBM and *Australian Emergency Management Institute – (AEMI 2014)*. The Town of Whitsunday Drainage model is refined as a Level 2 flood study as per Section 13.1.13.1 of *Integrating State Interests in a Planning Scheme (Guidance for Local Governments)*.

### Planning Scheme integration

Localised Flood Studies were undertaken by RPEQ, identifying 1% AEP flood events in accordance with best practice and the SPP. Council considered the outcomes of the Flood Studies and integrated into the Planning Scheme Flood Hazard Overlay map as the *best available information*. Flood studies and integration into the Planning Scheme are consistent with the *Australian Disaster Resilience Handbook 'Managing the floodplain'* best practice approach to assessing flood and follows the flood risk assessment principles in Section 13.1.3.3 of the *Integrating State Interests in a Planning Scheme (Guidance for Local Governments)*.

Land use zones have not been amended in response to updated hazard risk mapping. Development controls, within the Flood Hazard Overlay Code of the Proposed Major Amendment, facilitate an acceptable

or tolerable level of risk in development in accordance with the Natural Hazards State Planning Policy 2017 and Guidance material, by:

- avoiding the risk;
- mitigating the risk with appropriate controls;
- ensuring no worsening of the hazard;
- where possible, reducing the existing risk over time; and/or
- removing the hazard.

Within the Town of Whitsunday risk mapping study area, overlay code benchmarks are more specific, limiting development potential within moderate and high-risk areas of the Town of Whitsunday study area, commensurate with recommendations from *Australian Emergency Management Institute – (AEMI 2014)*, *Town of Whitsunday Drainage Study 2017 (BMT WBM)* and the Natural hazards State Planning Policy 2017. Risk mapping replaces the Level 1 Baseline State-wide flood mapping that triggers individual properties to undertake a localised flood study to define risk, there is no detailed mapping in the Town of Whitsunday area. Therefore, Council cannot confirm if there are any new properties by introducing high and medium flood hazard areas. Flood risk principles guiding development are set out below:

| Hazard category | Type of control                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                         |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | Subdivision                                                                                                                                                                                                                                                                                                                                                                                                        | Material Change of Use                                                                                                                                                                                                                                                                                  |
| Low Risk        | <ul style="list-style-type: none"> <li>• Permitted subject to assessment with building envelopes 300mm above DFL;</li> <li>• Reconfiguration of a lot and Operational works consider storage capacity and any potential impacts on lots within the catchment (no worsening effects on adjoining lots);</li> <li>• Evacuation to safe grounds is considered; and</li> <li>• Riparian buffers maintained.</li> </ul> | <ul style="list-style-type: none"> <li>• Permitted subject to assessment;</li> <li>• Riparian buffers are maintained; and</li> <li>• Development will be required to build 300 mm above the Defined flood level (Q100) for habitable buildings and at Q100 for non-habitable buildings.</li> </ul>      |
| Medium Risk     | <ul style="list-style-type: none"> <li>• Building envelopes occur outside the mapped Medium Risk area and will not result in additional risk for people and property.</li> </ul>                                                                                                                                                                                                                                   | <ul style="list-style-type: none"> <li>• No increase in number of people living in the Medium Risk area, development on lot located outside of Medium Risk area; and</li> <li>• Following uses allowed - Extractive Industry, Agricultural and Infrastructure, such as Bridges and Landings.</li> </ul> |
| High Risk       | <ul style="list-style-type: none"> <li>• All building envelopes outside of High Risk area.</li> </ul>                                                                                                                                                                                                                                                                                                              | <ul style="list-style-type: none"> <li>• Following uses allowed - Extractive Industry, Agricultural and Infrastructure such as Bridges, Landings.</li> </ul>                                                                                                                                            |

Council will aim to implement similar risk mapping within Proserpine and Bowen through revised and updated flood mapping within future major amendments.

### 1.3 Landslide hazard areas

#### Mapping Source:

| Location                         | Landslide Mapping Source                                                           |
|----------------------------------|------------------------------------------------------------------------------------|
| Former Whitsunday Shire Boundary | <a href="#">Whitsunday Landslide Study 2019</a>                                    |
| Rest of Region                   | National Aeronautics and Space Administration (NASA) XYZ data sets (no amendments) |

#### Overview of hazard risk mapping amendments

Landslide mapping refinements within the Proposed Major Amendment were made to the former Whitsunday Shire Boundary area, in the south-east of the Region where landslide risk affecting future development is considered more prominent. Refined landslide risk mapping was informed by the *Whitsunday Landslide Study 2019*, undertaken by Cardno's suitably qualified geotechnical professionals, utilising a multi-criteria analysis of landslide risk factors to define risk and extents. All areas mapped as medium and high risk are 15% slope or greater. Low and very low risk areas are not mapped as they don't warrant landslide hazard assessment, as per Australian Geomechanics Society *Practice note guidelines for landslide risk management 2007* (AGS 2007). Landslide hazard risk assessment was consistent with AS/NZS ISO 31000:2009 Risk Management and AGS 2007. The risk mapping was further refined by Cardno considering historic events, and extents modified to ensure potential run-out areas are captured as risk areas for planning assessment.

No amendments were made to the Landslide Hazard Overlay mapping elsewhere in the Region, which was informed by data from NASA to identify slopes over 15% and mountain tops.

#### Planning Scheme integration

The localised Landslide Study was undertaken by suitably qualified geotechnical professionals, identifying landslide risk in accordance with national standards. Council considered the outcomes of the Landslide Study and integrated into the Planning Scheme Landslide Hazard Overlay map as the *best available information*.

Land use zones have not been modified in response to updated hazard risk mapping. Within the Proposed Major Amendment Landslide Hazard Overlay Code, specific outcomes for each landslide risk corresponding to the Study's refined mapping were not created, as landslide risk needs to be assessed on a site-by-site basis. The refined overlay map acts as a trigger for more detailed geotechnical assessment and assessment against benchmarks within the code. Amendments to the Landslide Hazard Overlay Code and Planning Scheme Policy in the Proposed Major Amendment ensure an acceptable or tolerable level of risk in accordance with the Natural Hazards State Planning Policy 2017 and Guidance material, by:

- avoiding the risk;
- mitigating the risk with appropriate controls;
- ensuring no worsening of the hazard;
- where possible, reducing the existing risk over time; and/or
- removing the hazard.

Regarding landslide mapping elsewhere in the Region, Council offset risk by also identifying slope 15% or greater within the Landslide Hazard Overlay Table of assessment, to trigger assessment against the Landslide Hazard Overlay Code benchmarks, even where not identified appropriately by the overlay mapping. The current Planning Scheme also employs the data from NASA, which is considered the best available information outside of the localised study.

### 1.4 Storm tide inundation areas

Mapping Source:

| Location        | Storm tide Mapping Source                                                                                                       |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------|
| Region Mainland | <a href="#">Whitsunday Coastal Hazard Mapping Refinement 2018</a><br>- 1% AEP at 2100 (incorporates climate change projections) |
| Islands         | <a href="#">QSpatial - Storm tide high/medium hazard Queensland</a>                                                             |

Overview of hazard risk mapping amendments

Storm tide inundation area refinements within the Proposed Major Amendment were developed for the Whitsunday mainland by BMT WBM in the Whitsunday Coastal Hazard Mapping Refinement 2018 study, as part of the QCoast - Coastal Hazard Adaptation Strategy (CHAS). The study provided several different storm tide scenarios, with Council adopting the 1% AEP event at 2100 for the Proposed Major Amendment Coastal Hazard Overlay.

Existing storm tide mapping sourced from the State Government was utilised around the Whitsunday Islands, which was out of scope of the Study. No amendments to the extents of this mapping were undertaken.

Planning Scheme integration

The localised Coastal Hazard Study was undertaken by RPEQ, identifying storm tide extents and depths in accordance with best practice and the SPP. Council considered the outcomes of the Coastal Hazard Study and integrated into the Planning Scheme Coastal Hazard – Storm Tide Overlay map as the *best available information*.

Land use zones have not been modified in response to updated storm tide mapping, as definitive outcomes for coastal adaptation were not developed within the Whitsunday Regional Council CHAS. The Study recommended Council vary existing storm tide categories, medium and high hazard, to be replaced with inundation and wave run-up areas. These categories are defined within Schedule 1 of the Planning Scheme, under 'Coastal hazard area':

- (i) wave run-up area is considered to affect premises 200m landward from the highest astronomical tide (HAT). It represents the peak elevation of the intermittent process of advancement and retreat of the shoreline associated with wave processes during the coastal inundation event (defined in [Coastal Hazard Mapping Refinement Report - Section 2.4.1.1](#)); and
- (ii) inundation area is located landward of the wave run-up area and is assumed to persist for a sufficient duration to cause inundation of land below this design water level.

Storm tide mapping reflects this definition, with all mapped storm tide extents within 200m of HAT being wave run-up areas and extents beyond this (where applicable) identified as inundation areas.

The Study also recommended that the freeboard associated with each of these categories is set at 1m above DSTE, if within the wave run-up area, or 0.5m, if within the inundation area. These components were included within the Proposed Major Amendment Coastal Hazard Overlay Code.

All other amendments to the Coastal Hazard Overlay Code in the Proposed Major Amendment facilitate an acceptable or tolerable level of risk in development in accordance with key principles of the Natural Hazards State Planning Policy 2017 and Guidance material, by:

- avoiding the risk;
- mitigating the risk with appropriate controls;
- ensuring no worsening of the hazard;
- where possible, reducing the existing risk over time; and/or
- removing the hazard.

## 1.5 Erosion and Permanent inundation areas

### Mapping Source:

| Location                    | Erosion and Permanent Inundation Mapping Source                                                                                   |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Permanent inundation Region | <a href="#">Whitsunday Coastal Hazard Mapping Refinement 2018</a>                                                                 |
| Erosion Mainland            | <a href="#">QSpatial - Erosion prone areas (refined by Department Environment and Science (DES) during State Interest Review)</a> |
| Erosion Islands             | <a href="#">QSpatial - Erosion prone areas</a><br>(No amendments)                                                                 |

### Overview of hazard risk mapping amendments

Permanent inundation at 2100 mapping refinements within the Proposed Major Amendment were developed for the Whitsunday mainland by BMT WBM in the Whitsunday Coastal Hazard Mapping Refinement 2018. The Study identifies all areas affected by HAT + 0.8m sea level rise.

Council has worked with DES to review the recommendations of the CHAS and the QSpatial erosion prone areas, which has resulted in a refinement of the QSpatial mapping provided to Council by DES.

### Planning Scheme integration

The localised Coastal Hazard Study and DES review of State erosion mapping was undertaken by RPEQ, identifying permanent inundation and erosion prone areas in accordance with best practice and the SPP. Council considered the outcomes of the Coastal Hazard Study for permanent inundation and DES refinements to erosion prone areas, and integrated into the Planning Scheme Coastal Hazard – Erosion Prone Areas and Permanent Inundation Overlay map as the *best available information*.

Land use zoning has not been modified in response to updated permanent inundation mapping as definitive outcomes for coastal adaptation were not developed within the Whitsunday Regional Council CHAS. Amendments to the Coastal Hazard Overlay Code in the Proposed Major Amendment facilitate an acceptable or tolerable level of risk in development in accordance with key principles of the Natural Hazards State Planning Policy 2017 and Guidance material, by:

- avoiding the risk;
- mitigating the risk with appropriate controls;
- ensuring no worsening of the hazard;
- where possible, reducing the existing risk over time; and/or
- removing the hazard.

---

**DATE:** 2021

---

**SUBJECT:** **State Interest Review – Ministerial Advice Letter 19 June 2017:  
Whitsunday Coast Airport zoning**

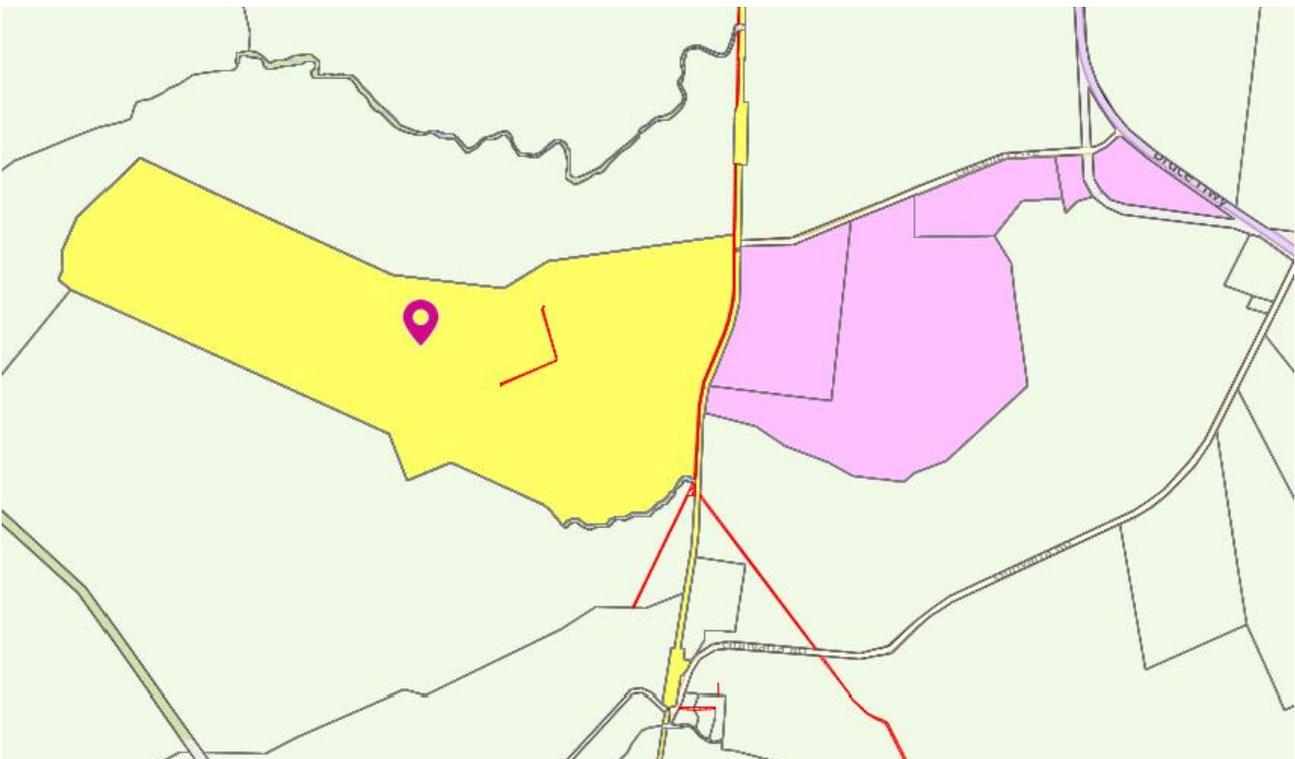

---

The letter from the Premier dated 19 June 2017 stated in point three:

- Reconsider the levels of assessment in the Community Facilities zone to facilitate development surrounding a strategic airport (Whitsunday Coast Airport)

The intent of the Department State Development, Infrastructure, Local Government and Planning is to support opportunity for diversification of the strategic airport for the Whitsundays Region by allowing flexibility for transport logistics and industry uses adjoining the airport.

To facilitate this, these future uses need to be supported by land use policy within the *Whitsunday Planning Scheme 2017* on or adjoining the airport land. Currently, the airport land (50 HR808298) is zoned community facilities and land to the east is zoned industry investigation. Council is the owner of the land that the airport is located on. It is one parcel approximately 430ha in size, landlocked by adjoining Rural land with only one access from Lascelles Avenue, off the Bruce Highway.

The current definition of an airport is as follows:

*Air services –*

*Premises used for—*

- *the arrival or departure of aircraft;*
- *housing, servicing, refuelling, maintaining or repairing aircraft;*
- *the assembly and dispersal of passengers or goods on or from an aircraft;*

- *training and education facilities relating to aviation;*
- *aviation facilities; or*
- *an activity that is ancillary to an activity or facility that directly services the needs of aircraft passengers.*

The airport and all current or future industrial or transport logistics uses associated with the aerodrome do not require planning approval, as they fall under the Air services use definition as ancillary. Examples of ancillary uses may include, but not limited to:

- Shops or food and drink outlets;
- Warehousing;
- Offices;
- Service industry; or
- Transport depot.

Air services is *Accepted development if undertaken by or on behalf of the Council* and Council is the owner of the land that the airport is located on.

To enable further expansion beyond the airport parcel, land located to the east is zoned industry investigation. This zoning aims to protect this land for future industry uses that are anticipated beyond the lifetime of the Planning Scheme, albeit may be developed earlier if sufficient need is demonstrated. This zoning was a result of Condition 1 (b) within Ministerial Advice Letter 19 June 2017. Tenure of this land includes the State (Council as trustee 54HR1010) and other private owners.

Zone amendments of surrounding Rural land will be explored further when the Industry Investigation land begins being used to support the airport.

---

**DATE:** 2021

---

**SUBJECT:** **State Interest Review – Ministerial Advice Letter 19 June 2017:**  
**Clarity of Accepted subject to requirements benchmarks**

---

The letter from the Minister dated 19 June 2017 stated in point four:

- Reconsider the self-assessable development assessment criteria to be clearer and offer more certainty.

The intent of the Department State Development, Infrastructure, Local Government and Planning is to ensure development that is *accepted subject to requirements* within the Tables of assessment, can clearly ascertain if benchmarks are met to determine a level of assessment. Several development and overlay codes include *accepted subject to requirements* benchmarks that, if not met, would trigger an increase in the level of assessment.

Council undertook a review of these codes and considers that most benchmarks are quantifiable enough to determine compliance and level of assessment. It is considered that Ministerial Advice is relevant to the *Home-Based Business* code, which does include some benchmarks that are not quantified, albeit this is justified below.

#### *Home Based Business Code*

Outcomes that are not quantified are highlighted in red by Appendix 1, including:

- Amenity provisions about dust and odour;
- Limits to the storage of hazardous chemicals or gases; and
- Avoiding overloading utilities beyond normal residential use.

Benchmarks within the Home-based business code seek to strike a balance between defining quantifiable outcomes and ensuring that it can be easily understood by the community without the assistance of a consultant. The above outcomes could only be better quantified by including reference to other Acts or technical benchmark that would dilute the effectiveness of the 'tick and flick' approach for low-risk development.

Council considered improving these outcomes, however, given the low-risk nature of development associated with the code, it was determined that it is more important that the benchmarks can be easily interpreted by a reasonable person. Where Council may receive a complaint associated with a Home-based business failing to comply with these benchmarks, Council may utilise more specific controls driven by Environmental Health, governed by the *Environmental Protection Act* to facilitate compliance or guide planning approval as necessary.

**Appendix 1 – Home Based Business Code Table 9.3.7.3.1 – Outcomes subject to this memo in red:**

| Performance Outcomes                           |                                                                                                                                                                                                                                  | Acceptable Outcomes |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|-----------------------------|---------------------------------------------------------------------------------------|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PO9</b>                  | An acceptable standard of facilities is provided for guests of the bed and breakfast. | <b>AO9.1</b>               | Guests are provided with a bedroom capable of being enclosed to prevent visual or other intrusion by members of the host family or other guests. |
|                             |                                                                                       | <b>AO9.2</b>               | A separate bathroom and toilet facility is provided within the dwelling house for the exclusive use of guests.                                   |

**SUBJECT:** State Interest Review – Local Area Plan Memo

This Memo provides a detailed overview of proposed amendments recommended in response to State Interest Review comments on the *Whitsunday Planning Scheme 2017 Major amendment – Local Plans*. Comments were received in relation to:

- Avoiding overlapping with building assessment provisions; and
- Comments from DTMR.

## 1. Airlie Beach Local Plan

[DSDILGP request that Council avoids overlap with building assessment provisions.](#)

### Whitsunday Regional Council action/response

(original amendments in red (2020), additional amendments in green (2021))

Airlie Beach local plan Overall outcomes

7.2.1.2 (2)(c) amend as follows:

~~development is climate responsive and promotes a 'tropical sense of place', incorporating high quality, adaptable, energy efficient building design that maximises the utility of prevailing breezes, that is sensitive to the surrounding natural landscape, open spaces and pedestrian routes;~~

Airlie Beach local plan Benchmarks for assessable development

Reword PO6 to relate only to matters addressed in AO6.2, rather than energy efficiency addressed in AO6.1, which will be deleted.

Table 7.2.1.3.1 delete PO6 and replace as follows:

~~Development considers the position and orientation of windows, balconies and outdoor areas to capture prevailing breezes and views of the natural landscapes and open spaces.~~

Development is sited and orientated to promote views of natural landscapes from balconies and common outdoor areas.

Table 7.2.1.3.1 delete AO6.1:

~~Development is designed and sited to maximise passive cooling to increase the building's efficiency.~~

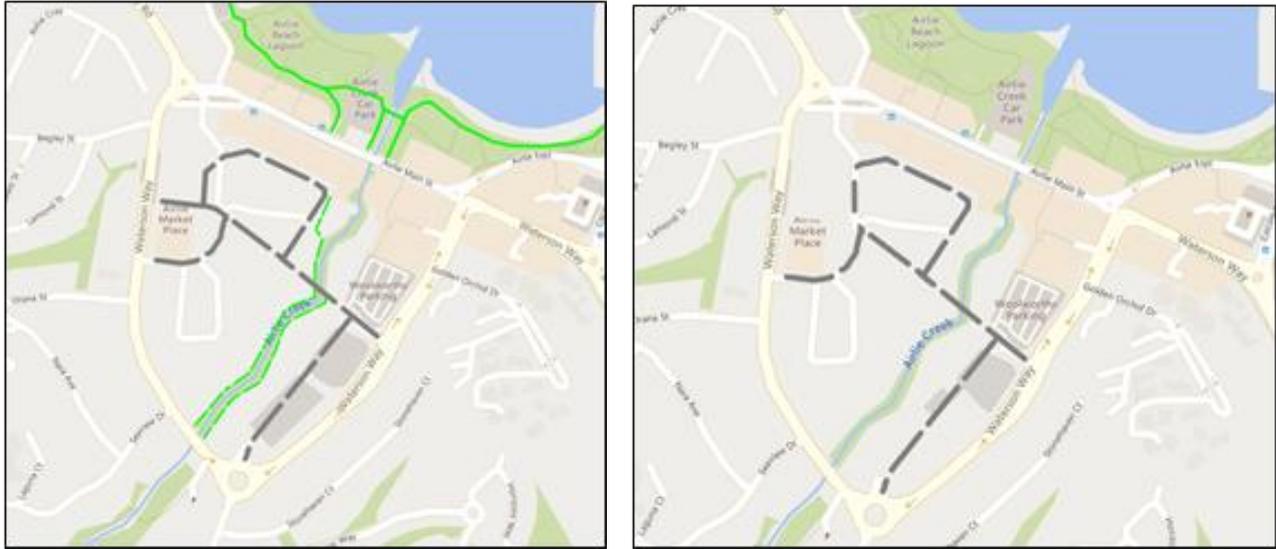

Table 7.2.1.3.1 AO6.2 (no amendment, for reference only):

Development overlooks natural landscapes and open spaces to increase the connection between built form and the environment.

DTMR request that Council amends the internal road layout to only include 1 intersection with Waterson Way on the western boundary.

### Whitsunday Regional Council action/response

Delete indicative map on left and replace with map on right:

DTMR request that Council amends the Local Plan that states active frontages are along Waterson Way, citing that this will be a major double lane road in the future, and instead focus active frontages on the indicative road layout above, internal to Precinct C.

### Whitsunday Regional Council action/response

(original amendments in red (2020), additional amendments in green (2021))

Airlie Beach local plan Purpose and overall outcomes

7.2.1.2 (2)(c) amend as follows:

- (g) pedestrian focused environments are established along Canal Street, Coconut Grove, Main Street and internal road networks of Precinct C and ~~Waterson Way~~ with:
  - (i) buildings built to the street alignment at ground level;
  - (ii) predominantly active uses at ground level;
  - (iii) façades articulated to ensure large, blank walls are not created;
  - (iv) awnings covering adjoining pedestrian footpaths along the full length of buildings;
  - (v) driveways avoided where alternate access points are available; and
  - (vi) undercroft car parking or car parking located to the rear or side of buildings; and

Insert additional Overall outcome:

- (h) development fronting Waterson Way ensures a safe and comfortable pedestrian experience, considering future expansion of Waterson Way as a double lane major collector route bypassing Airlie Beach.

## Airlie Beach local plan Benchmarks for assessable development

## Table 7.2.1.3.1 PO2 amend as follows:

|            |                                                                                                                                                                                                                                         |              |                                                                                                                                                                                  |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PO2</b> | Except where adjoining a laneway, buildings in Precinct A, Precinct B, on Waterson Way, internal road network of Precinct C, Canal Street or Coconut Grove in Precinct D create a continuous active street environment at ground level. | <b>AO2.1</b> | To promote a continuous active street environment, unless adjoining a laneway, development within Precinct A and Precinct B have front and side setbacks of 0m, at ground level. |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Table 7.2.1.3.1 PO7 &amp; AO7.1 amend as follows:

|            |                                                                                                                                                                             |              |                                                                                                                                                                                                                                                                              |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PO7</b> | Active uses are predominant at ground level, where fronting:<br>(a) Canal Street;<br>(b) Coconut Grove; and<br>(c) internal roads of Precinct C<br><del>Waterson Way.</del> | <b>AO7.1</b> | Development is sited and designed such that Canal Street, Coconut Grove and internal roads of Precinct C and <del>Waterson Way</del> comprise active uses or spaces at ground level, which promote casual surveillance and visual interest to adjoining pedestrian pathways. |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Table 7.2.1.3.1 PO9 amend as follows:

|            |                                                                                                                                                                                                  |              |                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PO9</b> | Development provides awnings, where fronting:<br>(a) Canal Street;<br>(b) Coconut Grove;<br>(c) Main Street;<br>(d) internal roads of Precinct C;<br>(e) Waterson Way; and<br>(f) the Foreshore. | <b>AO9.1</b> | Buildings provide adequate and appropriate shelter along adjoining streets and pedestrian routes in the form of an awning with a width:<br>(a) that is 3m wide or to within 1m of any kerb, whichever is less; or<br>(b) if awnings on adjoining premises are greater than 3m in width, awnings provided are consistent with the width and height of the adjoining awning, to within 1m of any kerb. |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Insert additional Performance outcome:

|            |                                                                                                                                                                                                                                                                                                                                                          |              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PO8</b> | Development fronting Waterson Way provides a safe and comfortable pedestrian experience, offering casual surveillance, shade trees, accessways and pathways adequately setback from the road edge.<br><br>Editor's note – Waterson Way is anticipated to be a double lane major collector route functioning as a bypass for traffic around Airlie Beach. | <b>AO8.1</b> | Development fronting Waterson Way is designed to address the street and create a safe and attractive pedestrian environment, by:<br>(a) utilising landscaping or space to adequately buffer pedestrian pathways from the road edge;<br>(b) locating clearly delineated accesses to buildings and internal pathways along the street frontage;<br>(c) providing balconies, windows and other openings along the street frontage to maximise casual surveillance; and<br>(d) establishing high quality landscaping, including shade trees. |

## 2. Bowen Local Plan

[DTMR request](#) to correct typographical error in PO12 from (d) and (e) to (a) and (b); and [DSDILGP request](#) that Council avoids overlap with building assessment provisions.

### Whitsunday Regional Council action/response

(original amendments in red (2020), additional amendments in green (2021))

Bowen local plan Benchmarks for assessable development

Table 7.2.1.3.1 PO12(a) amend as follows:

**Development adjoining Herbert Street and Santa Barbara Parade:**

- (a) promotes 'sub-tropical sense of place' through the use of natural building materials, colours and vertical landscaping that create a cooler microclimate in the street; and
- (b) includes architectural features reflective of the built form character of Herbert Street.

[DTMR request](#) to remove references to accommodation activities within the Local Plan Precinct B and make all accommodation activities impact assessable throughout Precinct B in the Tables of Assessment for the Bowen Local Plan; and

[DTMR request](#) to amend table 5.9.2.5 to make Marine industry code assessable within the Precinct B mixed use zone.

### Whitsunday Regional Council action/response

Part 5 - 5.5 Categories of development and assessment – Material change of use

Replace Table 5.9.2.5 Bowen local plan - Precinct B – Mixed use zone with Table 5.9.2.5 Bowen local plan - Precinct B – Waterfront and marine industry zone to more appropriately reflect the existing uses in the precinct and removal of Accommodation activities and Warehouse use.

**Note: some accepted and code assessable uses from the removed Mixed use zone have been retained and some Precinct C - Waterfront and marine industry zone have been duplicated in the Precinct B - Waterfront and marine industry zone, identified in blue below.**

Summary of Accepted and Code assessable uses:

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## Whitsunday Regional Council action/response

(original amendments in red (2020), additional amendments in green (2021))

Bowen local plan Purpose and overall outcomes

7.2.2.2 (2) Precinct B – Henry Darwen Drive amend as follows:

- (g) development activates Henry Darwen Drive with a mix of low intensity, marine oriented:
  - i. ~~Business activities;~~
  - ii. ~~Service industry-Industry activities;~~
  - iii. ~~Educational establishment;~~
  - iv. ~~Port services;~~
  - v. ~~Recreation activities; and~~
  - vi. ~~Bar, Club, Shop, Food and Drink or Offices and Accommodation activities that support uses within the other Precincts;~~
- (h) ~~Accommodation activities provide for higher density living opportunities above the street level to facilitate active frontages at the street level, contribute to the vibrancy of the local plan area and enhance the development potential of the land;~~
- (i) ~~Accommodation activities are sited, designed and landscaped to maximise views of McCanes Bay and mitigate amenity impacts from nearby Marine industry uses, Landings and Port services;~~
- (h) signage, pathways and landscaped connections facilitate efficient pedestrian and cycle movement throughout the local plan area and into Bowen CBD;
- (i) development incorporates semi-public or, where appropriate, public spaces adjoining water frontages;
- (j) development on the Recreation and open space zone land and Community facilities zone land is appropriately designed to be self-contained, responding to the disconnect from the Bowen CBD, and capitalising on the proximity to the water; and
- (k) development facilitates the public activation of Henry Darwen Drive;

It is recommended that all deletions, amendments and inclusions outlined in this memo be integrated into the Whitsunday Planning Scheme 2017 Major Amendment V4.1 in response to comments from DSDILGP and DTMR during the State Interest Review.

**13.3.2 - 20210647 – Development Permit for Material Change of Use - Tourist Park (4 X Glamping Tents) - 317 Sugarloaf Road, Sugarloaf, L: 33 RP: 895918 - Stokes C/- Wynne Planning and Development Pty Ltd**

**DATE:** Wednesday 8 December 2021

**TO:** Ordinary Council Meeting

**AUTHOR:** James McEvoy-Bowe - Planner

**AUTHORISING OFFICER:** Neil McGaffin - Director Development Services

**PRESENTED FOR:** Decision

**ATTACHMENTS**

1. Conditions of Approval [13.3.2.1 - 6 pages]
  2. Planning Assessment Report [13.3.2.2 - 7 pages]
  3. Locality Plan [13.3.2.3 - 1 page]
  4. Zoning Plan [13.3.2.4 - 1 page]
  5. Proposal Plans [13.3.2.5 - 4 pages]
- 

**PURPOSE**

Development Applications requiring decisions which are outside the Council officer delegated authority require Council consideration.

**OFFICER'S RECOMMENDATION**

That Council approve the application for Development Application for Material Change of Use for a Tourist Park (Whitsunday Eco Stay - 4 x Glamping Tents), made by K J Stokes, on L: 33 RP: 895918 T: 50141455 and located at 317 Sugarloaf Road Sugarloaf, subject to the conditions outlined in **Attachment 1**.

---

**BACKGROUND**

There is no previous Council decision relating to this matter.

**APPLICATION SUMMARY**

Council is in receipt of a development application to establish a staged Tourist Park containing four (4) Eco-Glamping Tents at 317 Sugarloaf Road, Sugarloaf. The development hinges on it's low-scale character and does not intend to grow larger than what is proposed, thus the applicant acknowledges that there will be a condition of approval capping the development at a maximum of four (4) tents. The development application received seven (7) submissions during the Public Notification period and one (1) outside of the submission period. A complete planning assessment can be found in **Attachment 2**.

**STATUTORY/COMPLIANCE MATTERS**

Planning Act 2016

**STRATEGIC IMPACTS**

Process all statutory applications within statutory timeframes.

## **FINANCIAL IMPLICATIONS**

Infrastructure Charges of \$18,567.76 to be levied.

## **CONSULTATION**

Manager Development Assessment  
Environment & Climate Officer  
Civil Engineer (Network Planning)  
Assets Technical Officer – Roads & Drainage

## **RISK ASSESSMENT**

Council's decision may be appealed in the Planning & Environment Court of Queensland.

## **TIMINGS/DEADLINES**

Council's decision is due by **21 December 2021**.

## **CONFLICT OF INTEREST DECLARATION**

Council officers contributing to the preparation and approval of this report have no conflicts of interest to declare.

## **HUMAN RIGHTS IMPACT**

Section 58 of the Human Rights Act 2019 specifies required conduct for public entities when acting or making a decision. Sections 15 – 37 of the Human Rights Act 2019 identifies the human rights a public entity must consider in making a decision. The human rights relevant to this decision are as follows:

Section 19 – Freedom of movement.

Section 21 – Freedom of expression.

Section 24 – Right to own property and not be arbitrarily deprived of property.

Section 27 – Cultural rights – generally – all persons with a particular cultural, religious, racial or linguistic background have the right to enjoy their culture, to declare and practice their religion and use their language.

Section 28 – Cultural rights – Aboriginal peoples and Torres Strait Islander peoples.

This decision does not limit the above identified human rights.

## Attachment 13.3.2.1 Conditions of Approval

### **1.0 ADMINISTRATION**

1.1 The approved development must be completed and maintained generally in accordance with the approved drawings and documents:

| Plan/Document Name                                    | Prepared By                             | Plan Number  | Dated      |
|-------------------------------------------------------|-----------------------------------------|--------------|------------|

1.2 The following further development permits are required prior to commencement of work on site or commencement of the use:

- Operational Works:
  - Access & Parking; and
  - Erosion & Sediment Control.
- Plumbing and Drainage Works; and
- Building Works.

All Operational Works, Plumbing and Drainage Works Development Permits must be obtained prior to the issue of a Building Works Development Permit.

1.3 Where a discrepancy or conflict exists between the written conditions of this approval and the approved plans, the requirements of the written condition(s) will prevail.

1.4 All conditions of this approval must be complied with in full to Council's satisfaction prior to the commencement of the use.

1.5 The applicant shall demonstrate and provide evidence that compliance with all conditions of this development approval and any other subsequent development approvals as a result of this development approval have been complied with at the time of the commencement of the use.

1.6 The development can be undertaken in up to four (4) stages to facilitate the creation of one (1) or more tents at a time.

### **2.0 CLEARING, LANDSCAPING AND FENCING**

2.1 Prior to the commencement of the use, the applicant must provide a 3m densely planted, landscaping buffer at the following locations:

- Along the Sugarloaf Road frontage, from the north-eastern boundary corner, to 5.0 meters south of the car parking area. This will require the parking area to be set back at least 3.0m from the boundary;

## Attachment 13.3.2.1 Conditions of Approval

- Along the full length of the southern edge of the car parking area;
  - Along the northern property boundary from the north-eastern boundary corner to 5m west of the camping area: approximately 70.0m.
- 2.2 Landscaping beds must be mulched and watered to ensure that vegetation is fully established and at least 2.0m high within 12 months. Hedging or screening plants are to be chosen from Council's approved Planting Species List SC6.4.5.
- 2.3 All vegetative waste cleared as part of the development of the site is to be shredded within sixty (60) days of clearing and retained on site for mulching.
- 2.4 Any pruning works must be in accordance with AS 4373-2007 – Pruning of Amenity Tree.
- 2.5 No invasive plants (Biosecurity Act, 2014) or declared local pests (Local Law no.3) shall be planted on the site or allowed to invade the site and the site must be managed and maintained to exclude weeds.
- 2.6 To reduce the spread of weeds, all earthmoving equipment shall be free of soil and seed before being taken to the work site and again on completion of the project.

### **3.0 BUILDING**

- 3.1 Building, paving and landscaping materials are not to be highly reflective, or likely to create glare or hazardous conditions when wet.
- 3.2 Only the 'Eco Structures' tents and amenities shown on the approved plans are to be installed and are to be clad in non-reflective materials in muted colours to blend with the landscape.

### **4.0 WATER INFRASTRUCTURE**

- 4.1 Design and construct a potable water supply to the proposal in accordance with Council's Planning Scheme or Planning Policy applicable at the time. Such work must be in accordance with an approved detail design at future building application stage.

### **5.0 ON-SITE EFFLUENT DISPOSAL**

- 5.1 At building application stage the applicant is to design and construct an on-site sewerage treatment system to in accordance with Council's Planning Scheme applicable at the time and Queensland Plumbing and Wastewater code. The applicant will be required to supply a detailed site-specific Wastewater Report at building stage that complies with AS 1547:2012 and the Queensland Plumbing and Wastewater Code Version 1:2019.

### **6.0 ACCESS AND PARKING**

- 6.1 Prior to commencement of any work on site, an Operational Works development permit must be obtained in relation to Access and Parking. Any application for Operational Works (Access and Parking) must be accompanied by detailed engineering drawings demonstrating compliance with Council's Development Manual (current at the time of development), Australian Standard AS2890, AS1428 and this Decision Notice.
- 6.2 The applicant must maintain the existing external access from the pavement of Sugarloaf Road to the property boundary of Lot 33 to a gravel standard so as to comply as a minimum with the levels, dimensions and specifications as shown on Council's Standard Drawings RS-056 prior to the commencement of the use.
- 6.3 A minimum of five (5) car parking spaces and one (1) MRV space is to be provided and maintained within the boundaries of the property for the development prior to commencement of

## Attachment 13.3.2.1 Conditions of Approval

the use. All accesses, parking bays and manoeuvring areas must be designed and constructed so as to comply with the criteria described in AS2890 and AS1428.

### **7.0 STORMWATER AND FLOODING**

- 7.1 All stormwater drainage works must be designed and constructed in accordance with the Queensland Urban Drainage Manual current at the time of development and Council's Development Manual (current at the time of development).
- 7.2 All site works must be undertaken to ensure that there is no increase in flood levels and/or flood frequency at any locations where existing landowners and/or users are adversely affected by waterway flooding for all events up to and including Q100.

### **8.0 BUSHFIRE PROTECTION PLAN**

- 8.1 Prior to commencement of the use, the applicant must lodge with Council, certification that the recommendations contained with Bushfire Hazard Assessment & Bushfire Management Plan as well as the Vegetation Management Plan have been complied with.
- 8.2 Prior to commencement of the use, an evacuation plan must be submitted to and approved by Council.
- 8.3 Prior to commencement of the use, on-site water storage of minimum 76,000 litres to be installed for bushfire fighting purposes. Total volume can include a swimming pool. The applicant shall submit a plan clarifying the location and quantities of water supply available for firefighting for the camping area.

### **9.0 ENVIRONMENTAL MANAGEMENT PLAN (EMP)**

- 9.1 A Development Permit for Operational Works (Erosion Prevention and Sediment Control) must be obtained prior to commencement of work on site. Erosion prevention and sediment control measures must be established so as to comply with the requirements of the Whitsunday Regional Council Development Manual and the Best Practice Erosion & Sediment Control – November 2008 (IECA White Book) and the requirements of the Environmental Protection Act. The strategy of the plan must be implemented and maintained for the duration of the operational and building works, and until exposed soil areas are permanently stabilised (e.g., turfed, concreted).
- 9.2 Discharges of water pollutants, wastewater or stormwater from the site must not cause measurable levels of water pollutants in the receiving waters to fall outside the acceptable ranges specified in the 'Australian Water Quality Guidelines for Fresh and Marine Waters', ANZECC 2000.
- 9.3 No visible emissions of dust must occur beyond the boundaries of the site during earthworks and construction activities on the site. If, at any time during the earthworks and construction activities the dust emissions exceed the levels specified above, all dust generating activities must cease until the corrective actions have been implemented to reduce dust emissions to acceptable levels or wind conditions are such that acceptable levels are achieved.
- 9.4 The applicant must ensure that when undertaking any on-site or external works, including any filling and extraction, appropriate dust control measures are implemented in accordance with the Environmental Protection Act 1994 and complies with the relevant air quality objectives defined in the Environmental Protection (Air) Policy 2008.

**10.0 ENVIRONMENTAL HEALTH**

10.1 A Food Licence from Council's Environmental Health Department will be required if the applicant undertakes any food preparation and cooking for guests.

10.1 Waste and recycling storage facilities must be provided in accordance with the following provisions:

- a) Adequate waste containers must be provided to contain the volume and type of waste and recyclable matter generated by the development;
- b) Waste storage area for waste containers must be constructed of a solid concrete base or acceptable equivalent; and
- c) Waste storage area must be designed and constructed so it can be easily cleaned whilst ensuring that no waste or recyclable matter is released to the stormwater system or any waterway.

10.2 All reasonable and practicable measures are to be taken to ensure that the waste storage area is kept to a standard of cleanliness where there is no accumulation of:

- a) Waste, except in waste containers.
- b) Recycled matter, except in containers.
- c) Grease.
- d) Other visible matter.

**11.0 CATCHMENT AND LAND MANAGEMENT**

11.1 The applicant shall submit, prior to start of works, a Vegetation Management Plan that complies with SC6.2.6 – Vegetation Management Plan - planning scheme policy is to be submitted and endorsed by Council. The plan must show the following:

1. Indicate which trees will be retained and which tree will be removed for the developed area.
2. Include the recommendations of the Bushfire Management Plan.
3. Clearly indicate an asset protection zone for the camping area. The asset protection zone is to be developed as follows:
  - a. Be at least 10 m around the tents or otherwise approved by Council.
  - b. Avoid long grass understory.
  - c. Tree branches below 3 m are to be trimmed.
  - d. Avoid continuous or overlapping canopies of trees.
  - e. No overhanging branches over the tents.
  - f. No woodpiles, combustible material storage areas, large quantities of garden mulch or any other form of stacked flammable materials.
4. Include weed management.
5. Any disturbed areas must be revegetated with rainforest species.

## **12.0 OPERATING PROCEDURES**

- 12.1 The approval of the development is for a maximum density of four (4) tents.
- 12.2 The approval of the development is for short term accommodation only and does not permit permanent occupancy of the tent structures.
- 12.3 The use is to be conducted by a permanent resident of the site.
- 12.4 The accommodation activity will not exceed the noise standards set out within Schedule 1 of Environmental Protection (Noise) Policy 2019.
- 12.5 The applicant must prevent excessive noise after 10pm when conducting the use.
- 12.6 Waste storage areas are to be screened from guests.
- 12.7 Laundry and clothes drying facilities are provided for guests.
- 12.8 The applicant is to install a sign at the front of the property to signify the location of the accommodation activity. The sign is to be no larger than 0.3 square meters in sign face area, professionally made and weather-proof. The sign can be erected at the front of the premises or hung on a fence but must be seen from Sugarloaf Road.

## **13.0 MISCELLANEOUS**

- 13.1 If any item of cultural heritage is identified during site works, all work must cease and the relevant State Agency must be notified. Work can resume only after State Agency clearance is obtained.

The Applicant is reminded of their obligations under the Aboriginal Cultural Heritage Act, 2003 and the Torres Strait Islander Cultural Heritage Act 2003. Further information and databases are available from the Department of Aboriginal and Torres Strait Islander Partnerships at: [www.datsip.qld.gov.au](http://www.datsip.qld.gov.au)

- 13.2 Any alteration necessary to electricity, telephone, water mains, sewerage mains, and/or public utility installations resulting from the development or in connection with the development, must be at full cost to the developer.
- 13.3 Any building materials, equipment and the like must be appropriately tied down, placed indoors and secured on site at the time of preparation for cyclone events. The on site supervisor is to ensure that all contractors/employees take the necessary steps to secure the construction site in the event of a cyclone.
- 13.4 All construction materials, waste, waste skips, machinery and contractors' vehicles must be located and stored or parked within the site. No storage of materials, parking of construction machinery or contractors' vehicles will be permitted in Sugarloaf Road or adjoining land unless written permission from the owner of that land and Council is provided.
- 13.5 It is the developer's responsibility for the full rectification of any damage caused to neighbouring public infrastructure (such as footpaths, driveways, fences, gardens, trees and the like) caused by contractors, including clean-up of any litter or waste that is a result of the subject development.

## **14.0 ADVISORY NOTES**

- 14.1 Hours of work

It is the developer's responsibility to ensure compliance with the Environmental Protection Act 1994, which prohibits any construction, building and earthworks activities likely to cause nuisance noise (including the entry and departure of heavy vehicles) between the hours of 6.30 pm and 6.30 am from Monday to Saturday and at all times on Sundays or Public Holidays.

## Attachment 13.3.2.1 Conditions of Approval

### 14.2 Dust Control

It is the developer's responsibility to ensure compliance with the Environmental Nuisance of the Environmental Protection Act 1994 which prohibits unlawful environmental nuisance caused by dust, ash, fumes, light, odour or smoke beyond the boundaries of the property during all stages of the development including earthworks and construction.

### 14.3 Sedimentation Control

It is the developer's responsibility to ensure compliance with the Environmental Protection Act 1994 and Schedule 9 of the Environmental Protection Regulation 2008 to prevent soil erosion and contamination of the stormwater drainage system and waterways.

### 14.4 Noise During Construction and Noise in General

It is the developer's responsibility to ensure compliance with the Environmental Protection Act 1994.

### 14.5 General Safety of Public During Construction

It is the project manager's responsibility to ensure compliance with the Work Health and Safety Act 2011. It states that the project manager is obliged to ensure construction work is planned and managed in a way that prevents or minimises risks to the health and safety of members of the public at or near the workplace during construction work.

It is the principal contractor's responsibility to ensure compliance with the Work Health and Safety Act 2011. It states that the principal contractor is obliged on a construction workplace to ensure that work activities at the workplace prevent or minimise risks to the health and safety of the public at or near the workplace during the work.

It is the responsibility of the person in control of the workplace to ensure compliance with the Work Health and Safety Act 2011. It states that the person in control of the workplace is obliged to ensure there is appropriate, safe access to and from the workplace for persons other than the person's workers.

### 14.6 Enquiries relating to the aforementioned conditions should be directed to the Planning and Development Directorate who will direct the enquiry to the relevant officer.

## ANALYSIS

Council has received the following Development Application, which has been assessed against the provisions of the relevant legislation as reported below.

### 1. Application Summary

|                         |                                                                                         |
|-------------------------|-----------------------------------------------------------------------------------------|
| Proposal:               | Material Change of Use - Tourist Park (4 x Glamping Tents)                              |
| Landowner               | K J Stokes & A L Stokes                                                                 |
| Property Address:       | 317 Sugarloaf Road Sugarloaf                                                            |
| Property Description:   | L: 33 RP: 895918 T: 50141455                                                            |
| Area of Site:           | 2.044                                                                                   |
| Planning Scheme Zone:   | Rural Residential                                                                       |
| Level of assessment     | Impact Assessable                                                                       |
| Overlays:               | Bushfire Hazard Overlay<br>Environmental Significance Overlay<br>Infrastructure Overlay |
| Existing Use:           | Dwelling House                                                                          |
| Existing Approvals:     | Nil                                                                                     |
| Public Notification:    | 20 October 2021 / 15 November 2021                                                      |
| Submissions received:   | Seven (7) Properly Made, One (1) Not Properly Made                                      |
| State referrals:        | Nil                                                                                     |
| Infrastructure charges: | Nil                                                                                     |

### 2. Site Details

#### 2.1. Location

The subject site is located at 317 Sugarloaf Road, Sugarloaf.

#### 2.2. Zoning

The land is zoned Rural Residential under the Planning Scheme 2017.

#### 2.3. Site description

The site is a rectangular shaped allotment that has a gentle incline from Sugarloaf Road to the existing dwelling. The land is densely vegetated, with the very front of the block being the development area. The site currently has a dwelling house and one garage outbuilding. The location of the glamping tents is in a low 'hollowed out' area at the front of the site.

#### 2.4. Access

Access is gained from Sugarloaf Road via a single car width concrete driveway.

#### 2.5. Surrounding uses

The land adjoins existing rural residential development and one (1) large Rural allotment that backs onto the Dryander National Park.

### **3. Proposal Details**

Council is in receipt of a development application to establish a staged Tourist Park consisting of a maximum of four (4) glamping tent structures. The application is not considered to be a Nature-based Tourism venture and the applicant has stated that the most appropriate land use description is a Tourist Park as it is solely a short-term accommodation style development.

The camping tent area is situated at the front of the lot, well away from the nearest adjoining dwelling. The applicant wishes to stage the construction of the tents to one at a time to allow for the appropriate growth of the business. The glamping tents are a luxury option for camping and contain an ensuite bathroom, kitchenette and external deck. The tents will surround a shared firepit and communal area. The site will be managed by the owners who will live in the main residence on-site.

An effluent suitability report has determined the development site can receive an effluent system suitable for the proposed size of the Tourist Park. The supplementary engineering assessment by the applicant's Registered Professional Engineer (RPEQ) has demonstrated the site's existing access is safe for the proposed development, which is accepted. The bushfire threat will be mitigated by implementing the recommendations of the Bushfire Management Plan and recommended conditions of approval.

Seven submissions were received during the Public Notification period and one submission outside of the submission period. The primary concerns raised in the submissions were amenity loss due to the additional density the development brings to the site and that the development does not fit the Rural Residential character of the Sugarloaf area.

### **4. Planning Assessment**

The application has been assessed against the relevant provisions of the Planning Act, 2016 and the Whitsunday Regional Council Planning Scheme, 2017. The proposal is generally in accordance with the Planning Scheme and is recommended for approval in accordance with the drawings and documents submitted, subject to reasonable and relevant conditions (Attachment 1).

#### **4.1. State Assessment and Referral Agency (SARA)**

In accordance with the Planning Regulation 2017, the application was not required to be referred to SARA.

#### **4.2. State Planning Policy – July 2017**

The State Planning Policy (SPP) includes interim development assessment requirements to ensure that State interests are appropriately considered by local government when assessing development applications where the local government Planning Scheme has not yet appropriately integrated all of the State's interests in the SPP. As the most recent

SPP (July 2017) has not been reflected in the Whitsunday Regional Council Planning Scheme, Part B of the SPP confirms that it applies to the assessment of the development application.

State Interest – Liveable Communities

Not Applicable.

State Interest – Mining and Extractive Resources

Not Applicable.

State Interest – Water Quality

Not Applicable.

State Interest – Natural Resources, Risk and Resilience

A Bushfire Hazard Assessment and Management Plan has been provided to support the development application. The recommendations in combination with conditions imposed by Council have mitigated the impact of bushfire to the proposal.

State Interest – Strategic Airports and Aviation Facilities

Not Applicable.

4.3. Mackay Isaac and Whitsunday Regional Plan – February 2012

The Mackay, Isaac and Whitsunday Regional Plan was established to provide the vision and direction for the region to 2031. The plan provides certainty about where the region is heading in the future and provides the framework to respond to the challenges and opportunities which may arise. The proposal is generally consistent with the provisions of the plan.

4.4. Whitsunday Regional Council Planning Scheme, 2017

4.4.1. Strategic Framework

Liveable communities and housing

The proposal is considered consistent with the liveable communities and housing element of the strategic intent. A small Tourist Park that has a maximum of four tent sites can be considered appropriate within the Rural Residential Zone setting, provided that it can operate without compromising the character of the area or cause a detrimental amenity effect for the surrounding locale. Considering the characteristics of the site and location of the proposed camping area, the amenity concerns have been addressed by the applicant appropriately or can be addressed via development conditions.

Economic growth

The economic resilience, wealth creating and employment generating capacities are supported by the development. The proposal will provide accommodation for tourists and a diversified accommodation experience and is therefore considered to be appropriately located.

Environment and heritage

The design and operation of the proposal does not compromise this strategic intent item.

#### Safety and resilience to hazards

The strategic framework seeks to avoid or mitigate potential adverse environmental impacts of development. The Bushfire Management Plan prepared by the applicant mitigates the potential bushfire risk on the property and where it falls short, conditions of approval ensure the threat is mitigated.

#### Infrastructure

The proposed development is suitably located to maximise the efficient use of the region's infrastructure networks.

#### 4.4.2. Overlay Codes

##### Bushfire Hazard Overlay

A Bushfire Report and Management Plan was provided as part of the information request response. The on-site management strategies proposed by the applicant can be seen as:

- Regular inspection and maintenance of the bushfire breaks on all property boundaries, particularly the Northern boundary where the threat is highest.
- Readily available water supplies including bore pump (located on the western end of the property), 80,000L on-site water tank storage, large swimming pool (as a backup water supply approx. 35000 litres) and external sources of water including local company KVS Cartage for water supply.
- Clearly identifiable evacuation route to Sugarloaf Road.
- Plantings consisting of rainforest species that reduce the spreading load.

Council officers have imposed specific conditions to ensure the threat is managed. These conditions particularly pertain to an Asset Protection Zone around the tents. The added conditions and the management plan together sufficiently deal with the bushfire hazard.

##### Environmental Significance Overlay

No ecological report was required as the proposed tents are located at the front of the site within a cleared area which is outside the overlay. Should trees need to be removed, they would likely be covered by exemptions in the Vegetation Management Act.

##### Infrastructure Overlay (Major Electricity Buffer)

The glamping tents are located outside the fire buffer area and therefore maintain a suitable separation distance from the dwelling.

#### 4.4.3. Rural Residential Zone Code

The proposal is consistent with the overall outcomes sought for the Rural Residential zone, primarily due to the low-scale size of the development. The tents will be located a low-lying, well vegetated part of the site, 50m back from Sugarloaf Road. Conditions include the provision of dense landscaping to screen the tents and associated car parking from the street and neighbours.

The tent sites are located on the northern side of the property, which adjoins and access handle to the adjoining rural lot. This access handle is too narrow for commercial agricultural development which may affect the camping area.

Supplementary reporting undertaken by the applicant's consultants has demonstrated the development can be provided with a suitable level of infrastructure, including effluent disposal, water provisioning, access, and parking.

#### 4.4.4. Development Codes

##### Relocatable home park and tourist park code

The proposed Tourist Park will have a maximum of four (4) tent sites, and large portion of the Relocatable home park and Tourist Park code is not applicable to the development.

The development has no access to public passenger transport facilities which does not meet Acceptable Outcome AO1.1 of the code, but the type and scale of development coupled with the location, does not warrant the need for access to public transport.

The site is 2.04 hectares and provides enough space for on-site recreational activities and communal open space. The applicant intends to provide communal barbecues, fire pit and seating areas to compliment the communal space areas. A laundry service will be provided. The position of the tent sites exceeds the minimum setback distances required in the code.

Access is gained via a single-lane access driveway to Sugarloaf Road. The parking area is located directly off the access driveway within the front portion of the site, not facing towards the adjoining landowner. The supplementary engineering report demonstrates that the on-site circulation, driveway and parking area complies with the Development Manual. The proposed 5-bay carpark is within 15m of Sugarloaf Road and is within acceptable sight distance criteria to allow the entering/exiting vehicles to see and give-way to each other. A condition of approval is included to make provision for one medium rigid vehicle space.

The wastewater report demonstrates that the development can be suitably serviced for effluent disposal in compliance with the Queensland Plumbing and Wastewater Code. The development site is already connected to power and internet services and a suitable supply of water has been proposed. In addition to the proposed amount of on-site water (80,000L). Waste storage areas will be conditioned to be screened from guests.

##### Excavation and Filling Code

Limited excavation or filling is proposed on the site as part of this application in the form of minor earthworks required for the creation of the parking area.

##### Landscaping Code

A small amount of clearing is proposed for the parking area, otherwise all vegetation is to be kept on-site and maintained to an attractive standard for guests and to ensure appropriate residential privacy and amenity is achieved. Additional landscaping in the form of rainforest species is proposed in close proximity to the eco-tents in accordance with the Bushfire Management Plan and Council's approved tree species list. The parking area will be conditioned to be screened with landscaping from the road and adjoining properties.

##### Transport and Parking Code

The development provides the required number of parking spaces and the internal parking and circulation complies with the Development Manual.

## 5. Public Submissions

The development application was placed on public notification between 20/10/2021 and 15/11/2021 in accordance with the relevant provisions of the Planning Act 2016. The Notice of Compliance was received on 17/11/2021. Seven (7) Properly Made submissions were received during this period of Public Notification. One (1) Submission Not Properly Made as it was received outside of the notification period.

Submissions have been received and summarised in the below table:

| Issue                                                                                    | Comment/Condition Number                                                                                                                                                                                                                       |
|------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Proposal is greater than expected Rural Residential Density                           | The development is low intensity and is screened from neighbours' view. The owner/operators live on site and will manage visitor behaviour to ensure that neighbour amenity is not affected.                                                   |
| 2. Water Supply – Bore Supply                                                            | Bore usage is regulated by the Department of Natural Resources and Mines. The proposal is conditioned provide for water supply in the form of tanks near the existing shed. The bore is intended to 'top up' the supply when in use.           |
| 3. Visual Amenity – Proposed location of car park                                        | The car park is located approximately 100m from the neighbouring dwelling. Conditions require landscaped screening of the car parking area and tents from view from the road and adjoining properties to ensure a reduction on light spillage. |
| 4. Future Sale of Properties.                                                            | Not a planning issue.                                                                                                                                                                                                                          |
| 5. Vegetation Buffering – Thins out in dry periods                                       | The development is condition to provide dense landscaping which must be maintained until established.                                                                                                                                          |
| 6. Location to Public Passenger Transport                                                | The provision of public transport is not relevant for an activity of this scale and nature.                                                                                                                                                    |
| 7. Proposed Fire Pit could cause health issues                                           | The Bushfire Management Plan and Council's development conditions will prevent any bushfire threat. In addition, a fire pit can be used at any time by the applicant whether the development is occurring or not.                              |
| 8. Disturbance of Dogs in the Area                                                       | The control of dogs is the responsibility of the owner.                                                                                                                                                                                        |
| 9. Sugarloaf Road flooding issues – may cause tourist to be trapped in large rain events | The development application does not trigger assessment against the Flood Hazard Code and is therefore not a benchmark for consideration.                                                                                                      |
| 10. Previous Unlawful usage of Site                                                      | Not applicable to this application.                                                                                                                                                                                                            |

|                             |                                                                                                                                                                                                                                                                              |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11. Increased Traffic       | The scale of the proposal is very low and Sugarloaf Road has adequate width and capacity to accommodate the expected increase in traffic.                                                                                                                                    |
| 12. Location and Appearance | Conditions require the tents and car parking area to be screened from view from the road and adjoining properties.                                                                                                                                                           |
| 13. Effluent Disposal       | Officer comment:<br>The supplementary effluent disposal report complies with the Queensland Plumbing and Wastewater Code 2019. The existing dwelling house disposal system is located to the rear of the dwelling approximately 120m away from the proposed disposal trench. |

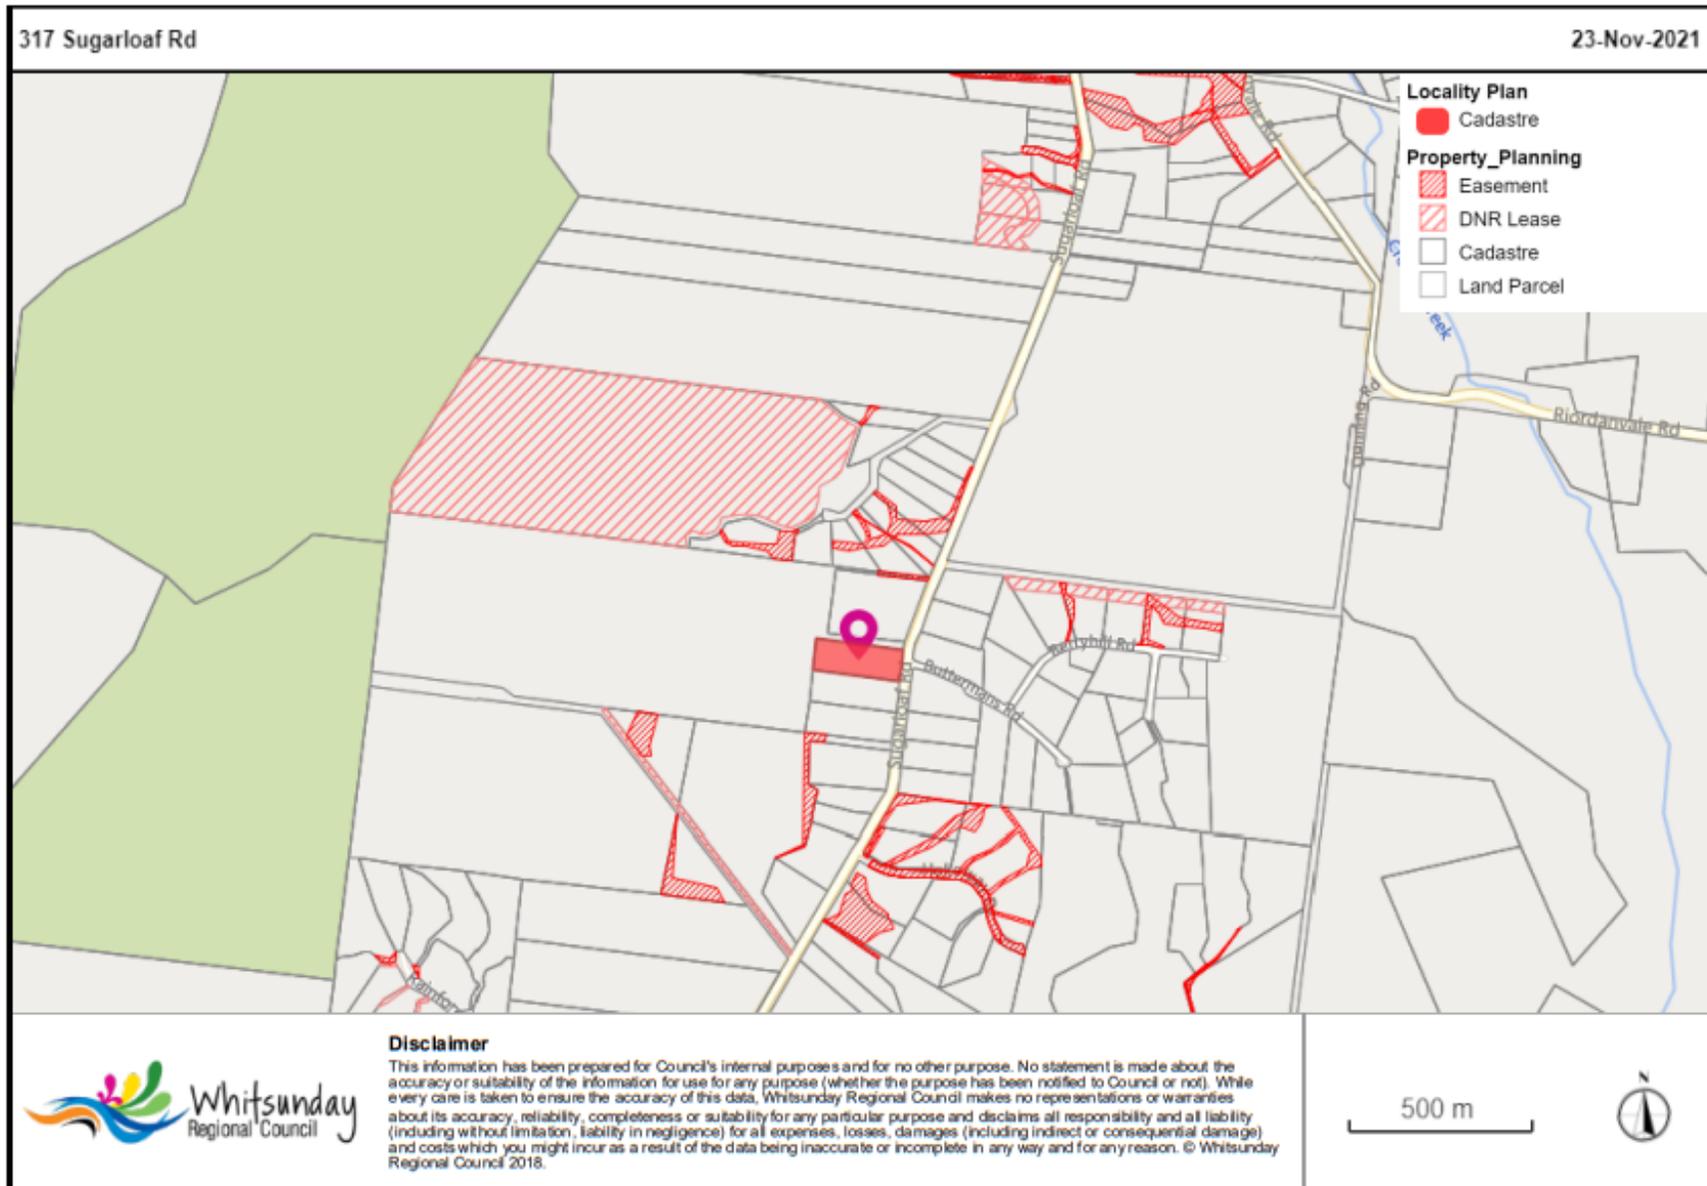

## 6. Infrastructure Charges

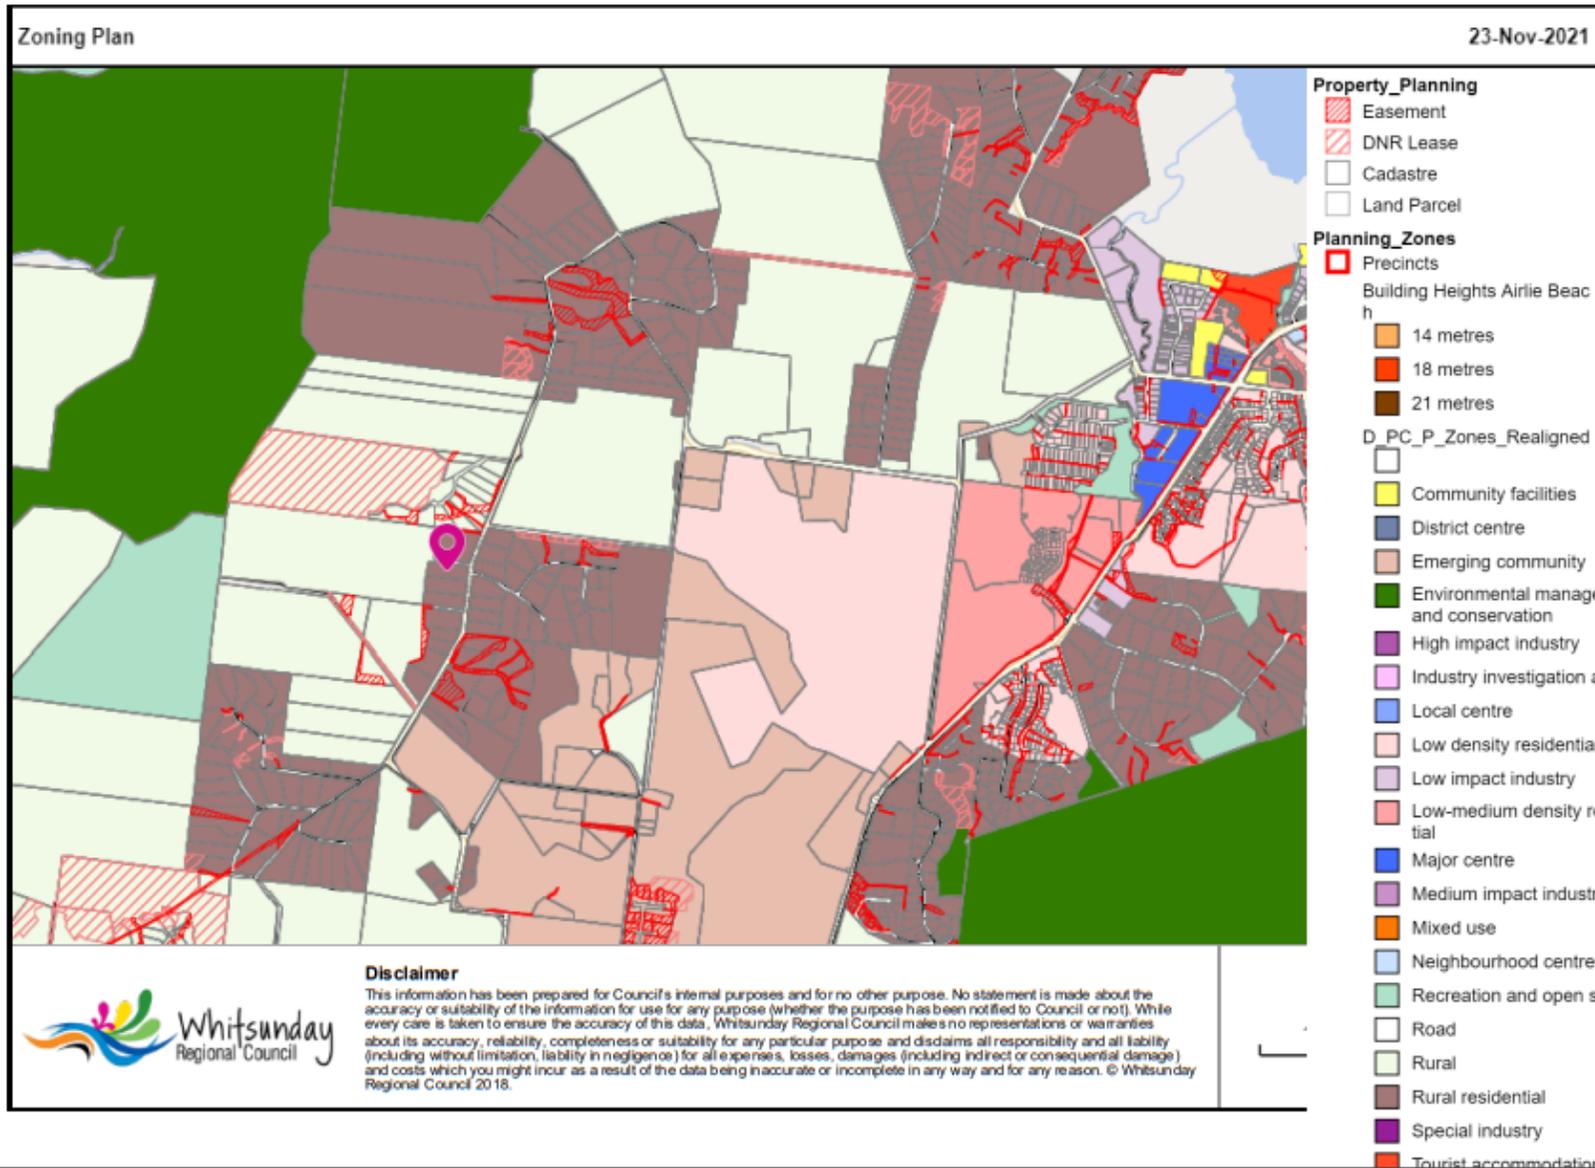

### 6.1. Adopted Infrastructure Charges Resolution

The following is a breakdown on the Infrastructure Charges for the development:

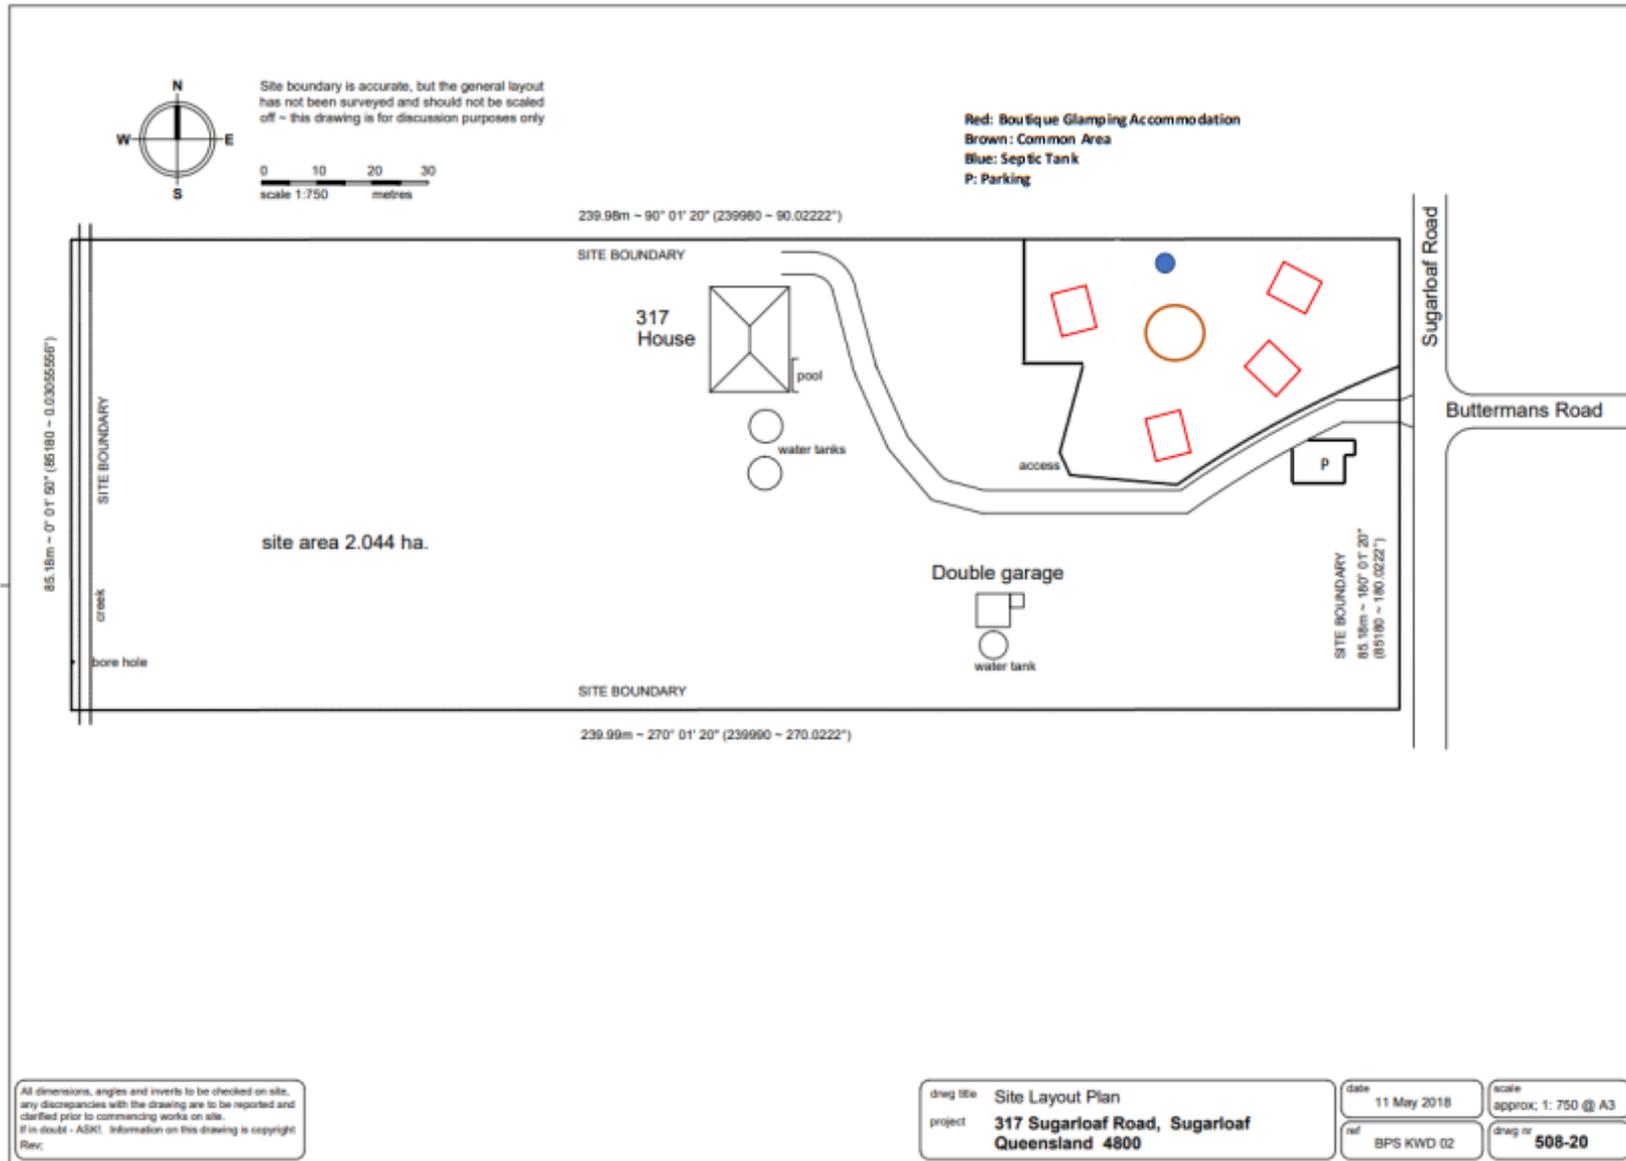

| Adopted Charge              |                                                |                   |                                                    |          |                    |
|-----------------------------|------------------------------------------------|-------------------|----------------------------------------------------|----------|--------------------|
| Type of Development         | Development Category                           | Demand Unit & Qty | Charge Rate                                        |          | Adopted Charge     |
| MCU                         | Accommodation (short-term)                     | 4                 | \$10,795.20 for each suite with 2 or less bedrooms |          | \$43,180.80        |
| MCU                         | Residential – 3 or more bedroom dwelling house | 1                 | \$30,226.70                                        |          | \$30,226.70        |
| <i>Total Adopted Charge</i> |                                                |                   |                                                    |          | <b>\$73,407.50</b> |
| Credit                      |                                                |                   |                                                    |          |                    |
| Type of Development         | Development Category                           | Demand Unit & Qty | Charge Rate                                        | Discount | Total Credit       |
| Existing                    | Residential                                    | 1                 | \$30,226.70                                        | 100%     | \$30,226.70        |
| MCU                         | Water                                          | 4                 | \$10,795.20                                        | 30%      | \$12,954.24        |
| MCU                         | Sewer                                          | 4                 | \$10,795.20                                        | 27%      | \$11,658.8         |
| <i>Total Credit</i>         |                                                |                   |                                                    |          | <b>\$54,839.74</b> |
| <b>Total Levied Charge</b>  |                                                |                   |                                                    |          | <b>\$18,567.76</b> |

Payment of Infrastructure Charges may be staged at a rate of 25% of the total levied charge per tent, to be paid prior to commencement of the use.

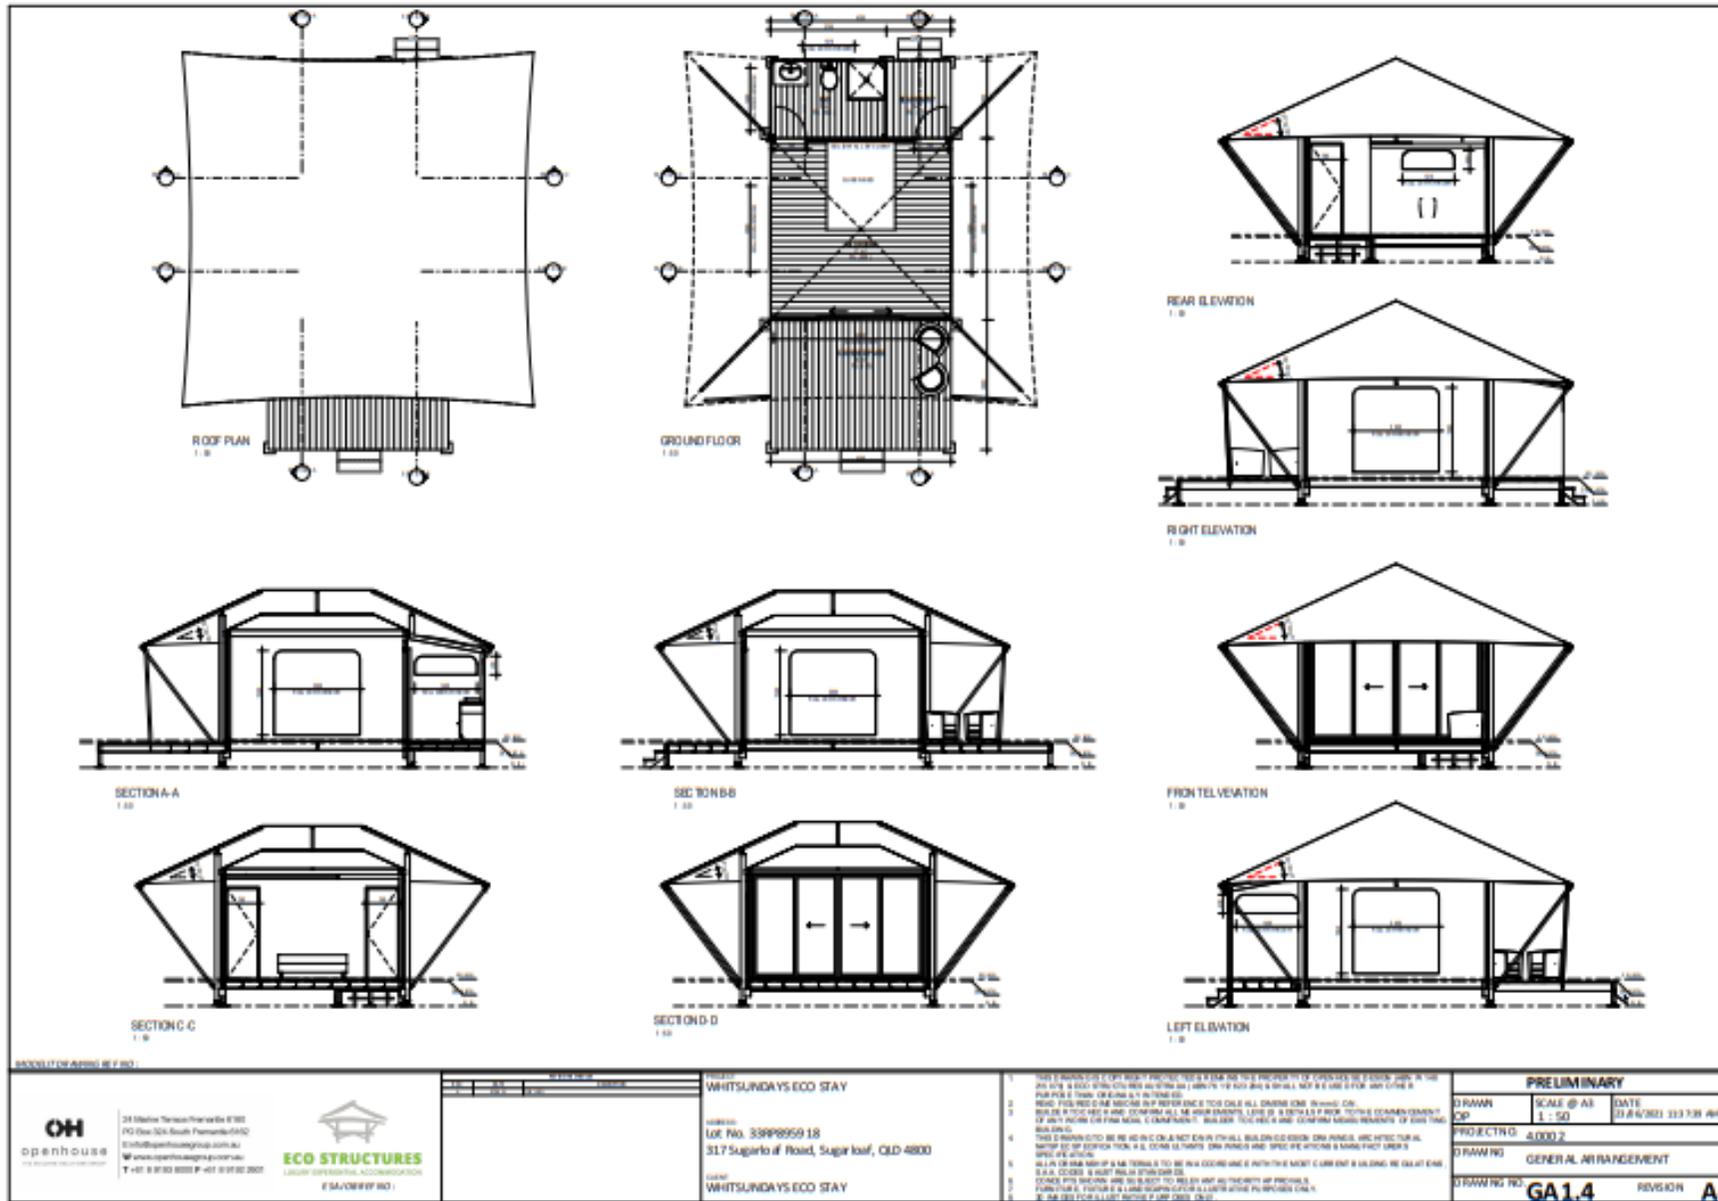

Attachment 13.3.2.5 Proposal Plans

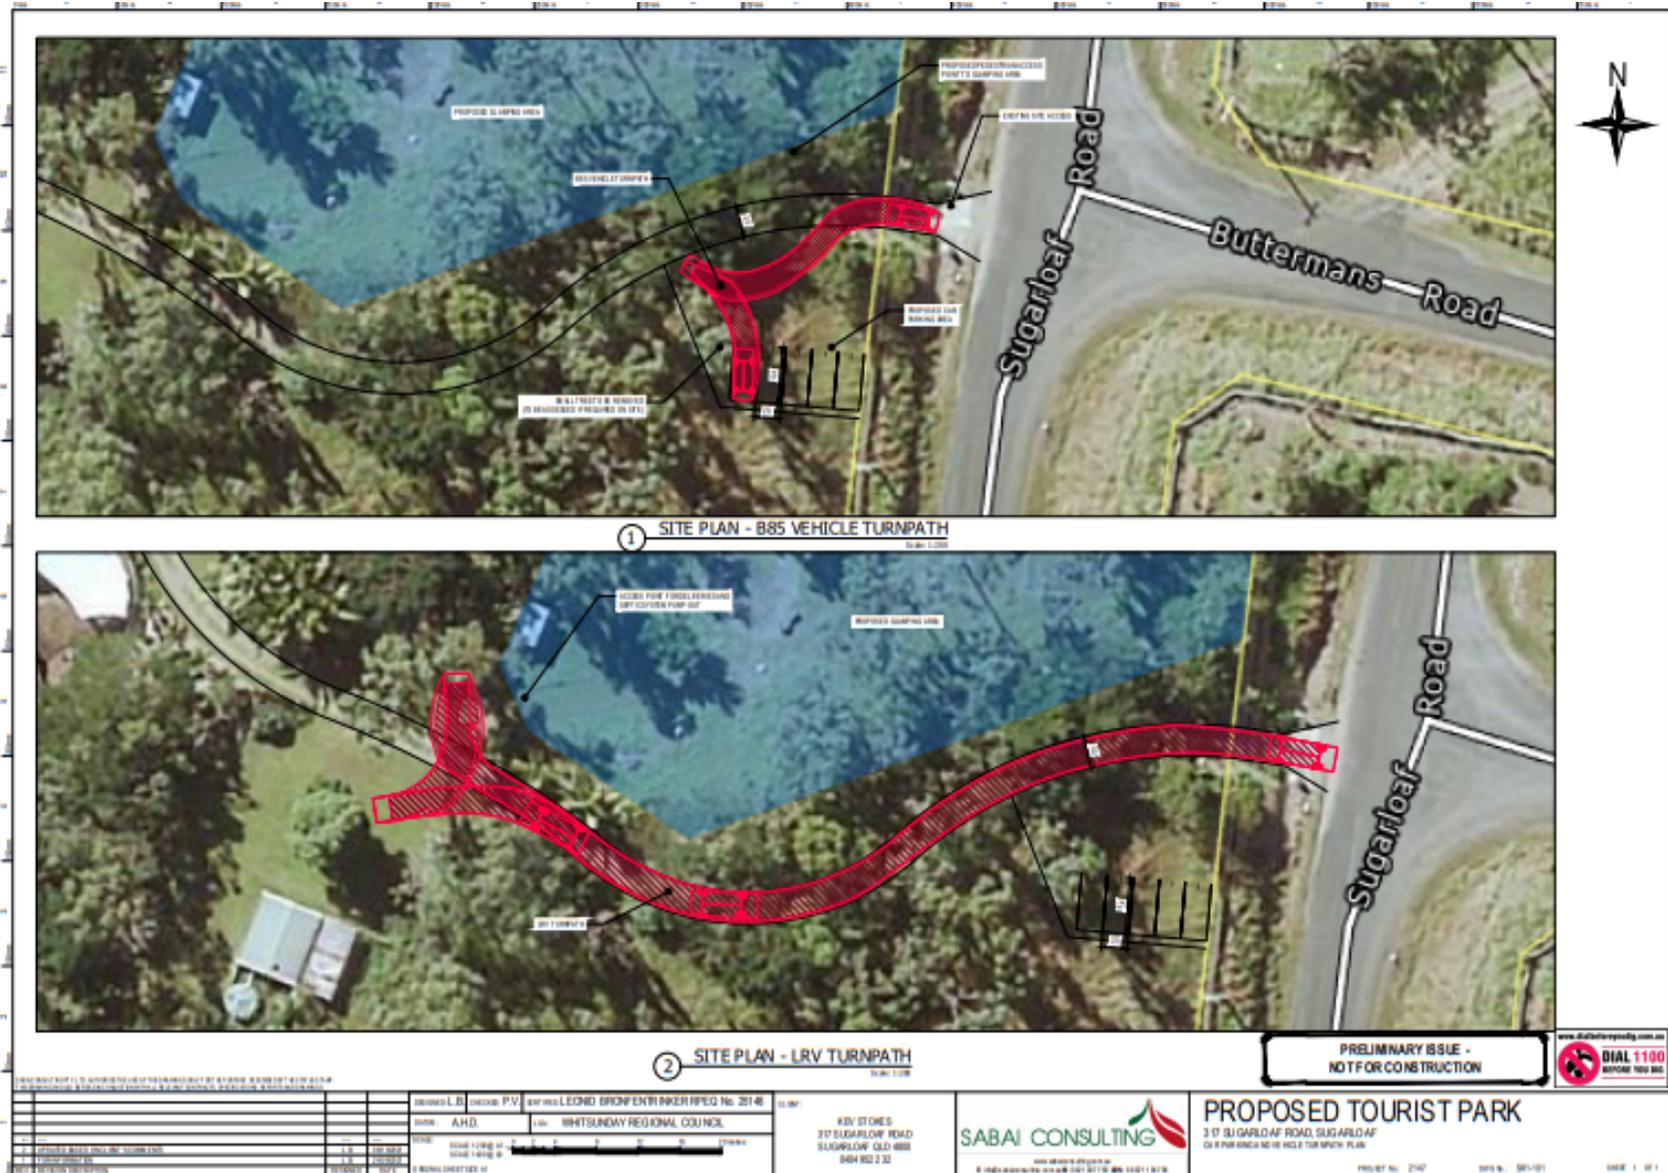

Attachment 13.3.2.5 Proposal Plans

|                                                                                                                                                                                                                                 |                                                                                              |                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                              |

  2. Proposal Plans [13.3.3.2 - 2 pages]
- 

#### **PURPOSE**

To inform Council of a project of state significance and to seek approval to issue a referral entity response.

#### **OFFICER'S RECOMMENDATION**

That Council provide a referral entity response for State Development Area Application for Material Change of Use of Premises for Undefined Use ("Launch Facility") in the Abbot Point State Development Area, made by Gilmour Space Technologies on Lots 8 and 10 on SP295408 and Lot 12 on SP275843 to the Office of the Coordinator General seeking the inclusion of the following standard type conditions:

- a) The Environmental Management Plans ("EMPs") for the construction and operational phases are to be provided to Whitsunday Regional Council prior to commencement of construction and operation. The EMPs for both the construction and operational phases are to account for any impacts outside the Abbot Point State Development Area.
  - b) A construction and operational water supply strategy is to be provided to Council demonstrating sufficient supply is available and outlining any expectations of Council to provide sufficient water supply.
  - c) A copy of the proposal and building plans for all structures are to be provided to Council prior to the construction.
  - d) A copy of the approval for the on-site sewerage treatment facility is to be provided to Council prior to operation.
  - e) Council is to be advised in writing no less than ten (10) business days prior to a launch occurring.
- 

#### **BACKGROUND**

There is no previous background to this matter.

## **APPLICATION SUMMARY**

### Project Description

Council is in receipt of a request for a referral entity response from the Office of the Coordinator General for a State Development Area Application for a Material Change of use for a Launch Facility in the Abbot Point State Development Area (“APSDA”). In accordance with the Development Scheme the application is required to be referred to the Whitsunday Regional Council as the applicable local government.

The site is wholly contained onshore within the APSDA and is located approximately 15 km west of Bowen and 2 km south of the Port of Abbot Point. The site is accessed via Abbot Point Road which connects directly to the Bruce Highway. The proposed development site has been selected as a prime location in consultation with the Queensland State Government. Abbot Point is deemed suitable for the proposed launch facility given its location in close proximity to the coast and distance from sensitive receptors.

The construction of the launch facility will occur over a number of stages and take approximately six (6) months. The launch facility will be established over the southern portion part of the site in order to limit the disturbance area in terms of the existing environmental characteristics associated with the site and its surrounds.

Launch operations will include campaigns, and a complete launch campaign is expected to take somewhere between 60 to 90 days. From June 2022, Gilmour Space plans to launch two (2) rockets per year until 2025, after which Gilmour Space aims to increase launch frequencies towards a monthly campaign.

The project will provide local employment opportunities during the construction and operational phases for approximately 40 full time equivalent staff (FTE) and greater during a launch campaign. The employment opportunities will have a trickle down effect in terms of local spend and purchases of materials and products, but also accommodation, hospitality and retail use during the construction and operational phase.

### Assessment

The application is considered to impact on the Bowen region outside of the declared State Development Area. Accordingly, the Whitsunday Regional Council Planning Scheme 2017 has been used to assess these impacts.

The Strategic framework sets the policy direction for the Planning Scheme and forms the basis for ensuring appropriate development occurs in the area. The purpose of the Planning Scheme is upheld with the proposed development supporting the five key themes. The economic resilience, wealth creating and employment generating capacities of the region are enhanced by the development and suitably co-located with existing major industry. An assessment of the key ecological features has been provided by the proponent. It is expected that stringent environmental conditions will be imposed on the development. The proposal is considered to place a minimal impact on the region’s infrastructure managed by Council.

The Coordinator General is requested to take into consideration the potential impact of the project on the wider Whitsunday region. In order to protect Council's interests. The Coordinator General will be requested to include the following standard conditions of approval, or the like, if the application is to be approved:

- a) The EMPs for the construction and operational phases are to be provided to Whitsunday Regional Council prior to commencement of construction and operation. The EMPs for both the construction and operational phases are to account for any impacts outside the Abbot Point State Development Area.
- b) A construction and operational water supply strategy is to be provided to Council demonstrating sufficient supply is available and outlining any expectations of Council to provide sufficient water supply.
- c) A copy of the proposal and building plans for all structures are to be provided to Council prior to the construction.
- d) A copy of the approval for the on-site sewerage treatment facility is to be provided to Council prior to operation.
- e) Council is to be advised in writing no less than ten (10) business days prior to a launch occurring.

#### **STATUTORY/COMPLIANCE MATTERS**

Council provides comment on this development application, under the APSDA Development Scheme and the State Development and Public Works Organisation Act 1971 ("SDPWO").

#### **STRATEGIC IMPACTS**

Process all statutory applications within statutory timeframes.

#### **FINANCIAL IMPLICATIONS**

N/A

#### **CONSULTATION**

Manager Development Assessment  
Principal Engineer – Civil & Environmental Whitsunday Water  
Civil Engineer (Network Planning)

#### **RISK ASSESSMENT**

The Coordinator General holds the discretion to include the suggested conditions of Council.

#### **TIMINGS/DEADLINES**

A referral entity response is due by **17 December 2021**.

#### **CONFLICT OF INTEREST DECLARATION**

Council officers contributing to the preparation and approval of this report have no conflicts of interest to declare.

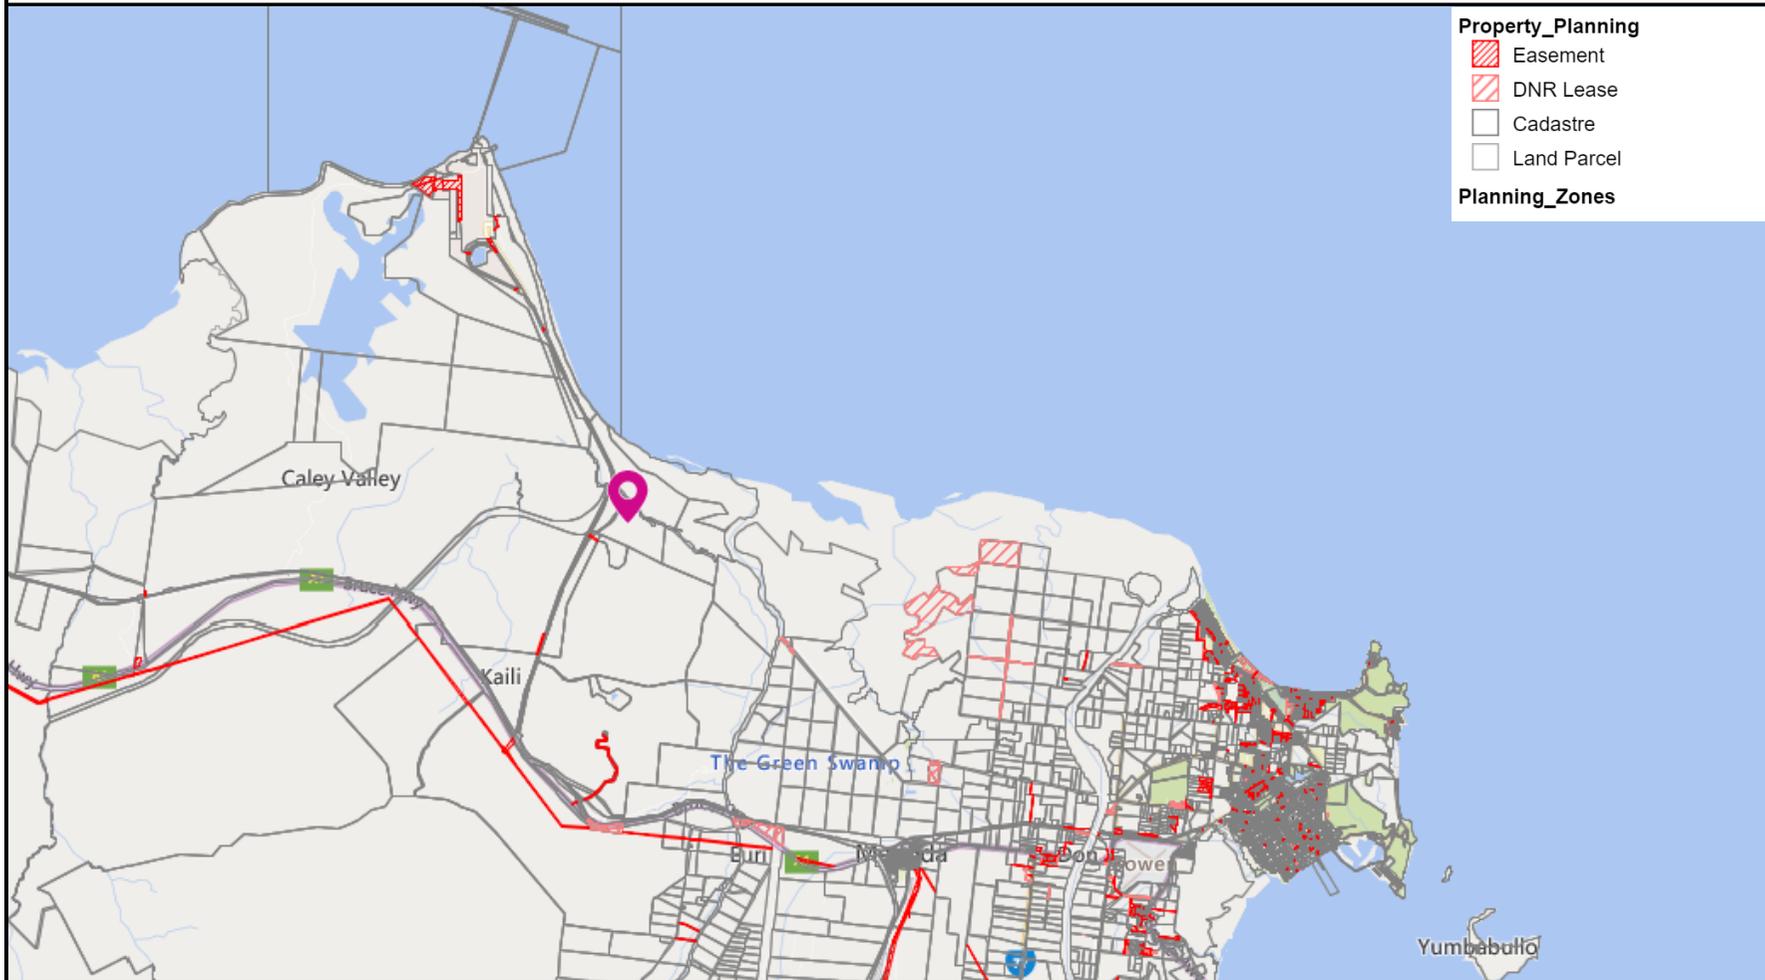

## **HUMAN RIGHTS IMPACT**

Section 58 of the Human Rights Act 2019 specifies required conduct for public entities when acting or making a decision. Sections 15 – 37 of the Human Rights Act 2019 identifies the human rights a public entity must consider in making a decision. The human rights relevant to this decision are as follows:

- Section 19 – Freedom of movement.
- Section 21 – Freedom of expression.
- Section 24 – Right to own property and not be arbitrarily deprived of property.
- Section 27 – Cultural rights – generally – all persons with a particular cultural, religious, racial or linguistic background have the right to enjoy their culture, to declare and practice their religion and use their language.
- Section 28 – Cultural rights – Aboriginal peoples and Torres Strait Islander peoples.

This decision does not limit the above identified human rights.

### 13.3.4 - Short Term Accommodation

**DATE:** Wednesday 8 December 2021

**TO:** Ordinary Council Meeting

**AUTHOR:** Doug Mackay - Manager Development Assessment

**AUTHORISING OFFICER:** Neil McGaffin - Director Development Services

**PRESENTED FOR:** Decision

#### ATTACHMENTS

1. Recommended Actions [**13.3.4.1** - 2 pages]
- 

#### PURPOSE

To recommend changes to Council's current strategy for managing short-term accommodation applications.

#### OFFICER'S RECOMMENDATION

That Council endorse the recommended actions contained in **Attachment 1** after the recent review of the Short-Term Accommodation Strategy.

---

#### BACKGROUND

In June 2021, Council commenced a process of reviewing its strategy for managing short-term accommodation applications. Meetings were held with members of the community and the real estate industry and various issues and options debated. At the most recent discussion on 20 October 2021, specific actions were identified for formal resolution. This report recommends actions required to implement the necessary changes.

#### DISCUSSION/CURRENT ISSUE

The issues identified for further actions are as follows:

1. Pool Safety Certificates

Council is not legally liable for pool safety issues associated with tenancy agreements, whether for short or long-term accommodation.

##### **Recommended Action:**

Development permits for short-term accommodation to include a new Advisory Note about the owners' requirement to ensure that Pool Safety Certificates are current, in compliance with legislation.

2. Smoke Alarms

Since 2017, Class 1a dwellings require improved smoke alarms. A building application is required to upgrade smoke alarms to current standards.

**Recommended Action:**

Development permits for short-term accommodation in a Class 1a dwelling house and a Class 2 unit, to be conditioned to upgrade fire safety measures to the equivalent requirement for a long-term rental property.

For previously approved short-term accommodation premises, permit holders will be required to upgrade fire safety measures within 6 months.

**3. Car Parking**

Requiring three (3) on-site car parking spaces is not consistent with the Planning Scheme parking requirements for a dwelling house or unit, or for short-term accommodation – but can be added as a ‘reasonable and relevant’ condition where on-street parking is a concern.

**Recommended Action:**

Development permits for short-term accommodation for premises with three (3) or more bedrooms to be conditioned to provide practical parking space on-site, for three (3) vehicles.

**4. Amenity**

A small number of approved premises cause neighbour amenity issues. Greater obligations on managing agents to vet guests and provide immediate response to complaints is required.

**Recommended Action:**

Development permits for short-term accommodation include the following conditions:

“Prior to commencement of the use the applicant must advise Council of the name and contact details of the appointed local property manager who will manage the operations of the development.

- The nominated property manager must sign and provide to Council, a Statutory Declaration affirming that at all times during the operation of the Short-term accommodation, the property manager will undertake the following actions
  - Display a sign including the name of the property manager and their all-hours contact phone number. The sign is to be no larger than 0.3 square metre in sign face area, professionally made and weather-proof. For a unit, this sign can be displayed on the door of the unit. For a dwelling house, the sign must be displayed where it can be clearly read by the public
  - Prior to the commencement of the use, inform in writing, the occupants of every neighbouring dwelling that the property has been approved for short-term accommodation and provide contact details including a 24-hour contact number.
  - Establish and maintain an accommodation register, recording names and contact details of all guests and duration of stay. The register must also include details of any complaints received and a copy of the signed

acceptance of the Code of Conduct document. This register is to be provided to Council on request.

- Prepare a Code of Conduct which must be provided to and agreed-to in writing by all adult guests prior to occupation. The Code of Conduct must include as a minimum:
  - The maximum permitted number of overnight guests on any one day;
  - A set of 'good neighbour' rules, to prevent anti-social behaviour and excessive noise after 9 pm, in accordance with Schedule 1 of Environmental Protection (Noise) Policy 2019;
  - Information for guests, including the 24-hour contact details of the nominated property manager, on-site carparking and waste bin arrangements;
  - Rules requiring eviction or forfeiture of money in the event of a significant breach of the Code of Conduct;
  - To meet and greet every guest prior to occupation (in person or electronically) to explain the Code of Conduct and other applicable rules.
  - To have a 24-hour contact number that must be answered, not with a recorded message;
  - To attend to any complaint about anti-social guest behaviour reported to the contact number, within 30 minutes. Agent response may include attendance by a private security firm;
  - To immediately evict any guests whose behaviour significantly breaches the Code of Conduct".

## 5. Local Law

The conditions that Council currently attaches to development permits be more appropriate as Local law conditions. There are additional advantages that a Local Law can achieve over a development permit.

### **Recommended Action:**

The Director of Community Services prepare a report on the costs and benefits of amending the Local Law to regulate short-term accommodation, similar to the approach currently being used by Noosa Regional Council.

## 6. Zones

There was discussion about preparing a policy or mapping layer to provide greater certainty to potential applicants in the Airlie Beach area, about Council's likely position in relation to future applications for short-term accommodation. The planning scheme zones (more specifically the residential low density and residential low-medium density) are the appropriate, statutory vehicle to determine future applications. Council retains the right to approve or refuse applications on a case-by-case basis.

### **Recommended Action:**

That the planning scheme zones be retained as the basis for determining applications for short-term accommodation.

## **STATUTORY/COMPLIANCE MATTERS**

Planning Act 2016  
Local Government Act 2009

## **STRATEGIC IMPACTS**

Monitor development and land use to ensure compliance with statutory requirements and development conditions.  
Provide consistent and transparent strategic framework and direction for the development industry and community.

## **FINANCIAL IMPLICATIONS**

Nil. Council has an adopted charge for short-term accommodation applications.

## **CONSULTATION/ENGAGEMENT**

Local real estate agents and Short-Term Accommodation managers  
Previous submitters to development applications  
Previous briefing meetings

## **RISK ASSESSMENT**

N/A

## **TIMINGS/DEADLINES**

N/A

## **CONFLICT OF INTEREST DECLARATION**

Council officers contributing to the preparation and approval of this report have no conflicts of interest to declare.

## **HUMAN RIGHTS IMPACT**

No.

## **ALTERNATIVES CONSIDERED**

Council has debated a number of options over the past 6 months in relation to the matters discussed within this report. The recommendations above reflect the outcome of these discussions.

## Recommended Actions

1. Development permits for short-term accommodation to include a new Advisory Note about the owners' requirement to ensure that Pool Safety Certificates are current, in compliance with legislation.
2. Development permits for short-term accommodation in a Class 1a dwelling house and a Class 2 unit, to be conditioned to upgrade fire safety measures to the equivalent requirement for a long-term rental property.

For previously approved short-term accommodation premises, permit holders will be required to upgrade fire safety measures within 6 months.

3. Development permits for short-term accommodation for premises with three (3) or more bedrooms to be conditioned to provide practical parking space on-site, for three (3) vehicles.
4. Development permits for short-term accommodation include the following conditions:

"Prior to commencement of the use the applicant must advise Council of the name and contact details of the appointed local property manager who will manage the operations of the development.

  - The nominated property manager must sign and provide to Council, a Statutory Declaration affirming that at all times during the operation of the Short-term accommodation, the property manager will undertake the following actions:
    - Display a sign including the name of the property manager and their all-hours contact phone number. The sign is to be no larger than 0.3 square meter in sign face area, professionally made and weather-proof. For a unit, this sign can be displayed on the door of the unit. For a dwelling house, the sign must be displayed where it can be clearly read by the public.
    - Prior to the commencement of the use, inform in writing, the occupants of every neighbouring dwelling that the property has been approved for short-term accommodation and provide contact details including a 24-hour contact number.
    - Establish and maintain an accommodation register, recording names and contact details of all guests and duration of stay. The register must also include details of any complaints received and a copy of the signed acceptance of the Code of Conduct document. This register is to be provided to Council on request.
    - Prepare a Code of Conduct which must be provided to and agreed-to in writing by all adult guests prior to occupation. The Code of Conduct must include as a minimum:
      - The maximum permitted number of overnight guests on any one day;
      - A set of 'good neighbour' rules, to prevent anti-social behaviour and excessive noise after 9pm, in accordance with Schedule 1 of Environmental Protection (Noise) Policy 2019;
      - Information for guests, including the 24-hour contact details of the nominated property manager, on-site carparking and waste bin arrangements;

#### Attachment 13.3.4.1 Recommended Actions

- Rules requiring eviction or forfeiture of money in the event of a significant breach of the Code of Conduct;
  - To meet and greet every guest prior to occupation (in person or electronically) to explain the Code of Conduct and other applicable rules.
  - To have a 24-hour contact number that must be answered, not with a recorded message;
  - To attend to any complaint about anti-social guest behaviour reported to the contact number, within 20 minutes. Agent response may include attendance by a private security firm;
  - To immediately evict any guests whose behaviour significantly breaches the Code of Conduct”.
5. The Director of Community Services prepare a report on the costs and benefits of amending the Local Law to regulate short-term accommodation, similar to the approach currently being used by Noosa Regional Council.
6. That the Planning Scheme zones be retained as the basis for determining applications for short-term accommodation.

## 13.3.5 - 20211136 - Request by Whitsunday Sailing Club Limited to Waive Development Application Fees

**DATE:** Wednesday 8 December 2021

**TO:** Ordinary Council Meeting

**AUTHOR:** Tamara Dansie - Administration Coordinator Development Services

**AUTHORISING OFFICER:** Neil McGaffin - Director Development Services

**PRESENTED FOR:** Decision

### ATTACHMENTS

1. Locality Map [**13.3.5.1** - 1 page]
  2. Site Plan [**13.3.5.2** - 2 pages]
- 

### PURPOSE

For Council to consider the request made by Whitsunday Sailing Club Limited to waive their Development Application fees applicable to Development Permit 20211136.

### OFFICER'S RECOMMENDATION

That Council decline the request made by Whitsunday Sailing Club Limited to waive Development Application fees applicable to Development Permit 20211136 as the majority of the land is not to be used for Whitsunday Sailing Club purposes and the application does not meet the guidelines of the Development Application Fee Refund Policy.

---

### BACKGROUND

On 12 November 2021, Whitsunday Sailing Club Limited ("WSC") lodged a Preliminary Approval to Vary the Whitsunday Planning Scheme 2017, a Development Application for Material Change of Use (Car Park) and a Development Application for a Reconfiguration of a Lot – One (1) Lot into Two (2) Lots for their land located at 6-12 The Beacons Road, Airlie Beach which is also referred to as Lot 104 SP232115. See **Attachment 1** for Locality Plan.

Development Application fees are calculated in accordance with the approved Register of Fees & Charges 2021/2022 and for the above-mentioned applications total \$9,287.00.

### DISCUSSION/CURRENT ISSUE

WSC has made representation seeking a waiver for the fees of these Development Applications on the basis that it is a not-for-profit organisation. WSC has advised that the land these applications refer to have been sold with the purpose of supplementing their building fund to construct the Northern Australian Maritime College along with a Federal Government grant they were successful in obtaining at the last Federal election.

In accordance with the Development Application Fee Refund Policy (the "Policy"), Council may choose to aid eligible community organisations based within the Region by fully or partially refunding development fees and charges where the development is a bona fide organisation activity that is for the benefit of their members and/or the community. As these

Development Applications are for the larger lot to be sold by WSC to a third party, with the smaller lot created to accommodate 5 carparking spaces, it is therefore not being used for WSC purposes.

The Policy further states that an eligible community organisation must also satisfy eligibility criteria including not holding a liquor licence and not operate gaming machines. It is noted that WSC do not comply with this requirement as they hold a liquor licence and have gaming machines within their Club House located at 10 Ocean Road, Airlie Beach.

Therefore, WSC do not qualify for consideration under the Policy and their request to waive the associated Development Application fees should be declined.

## **STATUTORY/COMPLIANCE MATTERS**

Planning Act 2016

Local Government Act 2009

Development Application Fee Refund Policy

## **STRATEGIC IMPACTS**

Process all statutory applications within statutory timeframes.

## **FINANCIAL IMPLICATIONS**

Providing discounts or any waiver of fees and charges not associated with an approved Policy framework will have a detrimental effect to Council's projected budget.

## **CONSULTATION/ENGAGEMENT**

Manager Development Assessment

Manager Community Development & Libraries

## **RISK ASSESSMENT**

As outlined within the financial implications section of this report, the core risk to Council is primarily financial, but the consequences in terms of establishing precedent should also be considered.

## **TIMINGS/DEADLINES**

There are no statutory timeframes for Council to consider the waiver request.

## **CONFLICT OF INTEREST DECLARATION**

Council officers contributing to the preparation and approval of this report have no conflicts of interest to declare.

## **HUMAN RIGHTS IMPACT**

No.

## **ALTERNATIVES CONSIDERED**

# Directors Report

## STRATEGIC PLANNING

This month has seen the Strategic Planning Team commence community consultation on the Airlie Beach Foreshore Land Management Plan and the Greater Airlie Beach Masterplan. Consultation will continue through into December with a report to come to Council in early 2022 identifying all the issues raised.

Council received all State Interest Review comments on the Planning Scheme Major Amendment and a report prepared to discuss the requested policy changes and other minor amendments. It is expected that public consultation will commence in the first quarter of 2022. Consultation is planned to be in conjunction with the Proserpine to Airlie Beach Growth Study and Structure Plan which Council resolved to place on public consultation. The Proserpine to Airlie Beach School Needs Analysis has also been endorsed by Council to advocate the recommendations to the Queensland Department of Education.

With the increase of development in the region, so to have the requests for flood and storm tide data. The Team continues to assist other departments with various projects and developing policies.

## DEVELOPMENT ASSESSMENT

The lodgement of new development applications declined slightly in November which is common prior to a late surge just before the Christmas rush. Reports on two large development applications for the Port of Airlie has absorbed significant resources, and with the ongoing matters with the Whitsunday Paradise development all staff have been busy.

Operational Works applications, lodged and determined, increased from October showing strong construction activity.

## BUILDING, PLUMBING & COMPLIANCE

### Building

Building within the region remains strong with a large focus on dwellings, domestic sheds and swimming pools. The number of Building Applications lodged by Private Certifiers remained consistent. Interestingly, between 1 January 2021 and 26 November 2021, 756 applications were lodged by Private Certifiers. During the same period last year, only 611 applications were received which sees the Building team already surpassing the annual amount by 145 applications.

### Plumbing

The local tradies are maintaining the usual rush towards the Christmas closure and the impending wet season. This has created a busy time for inspections with 93 undertaken this month. Interestingly between 1 January 2021 and 26 November 2021 990 inspections were completed. During the same period last year, only 923 inspections were completed, which sees the Plumbing team surpassing the annual amount by 67 inspections. This reflects the regions very active building market.

### Compliance

The building team continue to review historical building applications and issue Form 57 Lapsing Notices for any lapsed building applications identified. All lapsed applications continue to be added to the compliance register for further investigation and compliance where required.

## Strategic Planning

The Strategic Planning Branch is responsible for developing and maintaining land use and infrastructure plans and policies, such as the Planning Scheme, as well as reviewing various planning related State planning instruments and legislation, including the Mackay, Isaac, Whitsunday Region Plan.

### Operational Activities

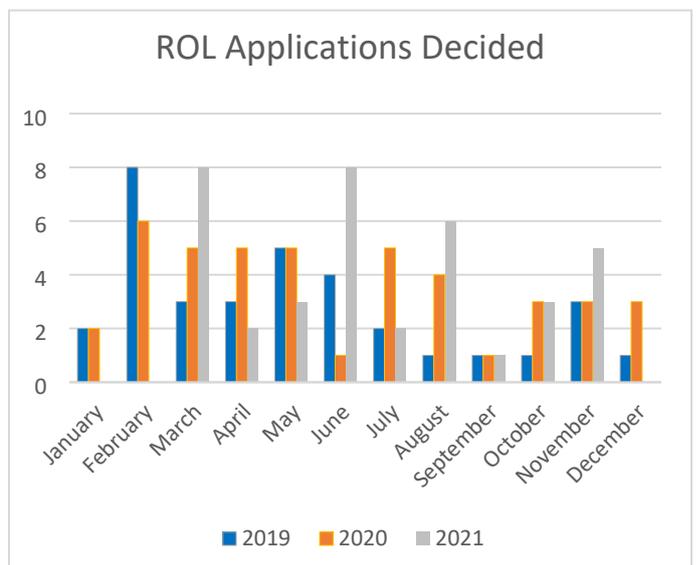

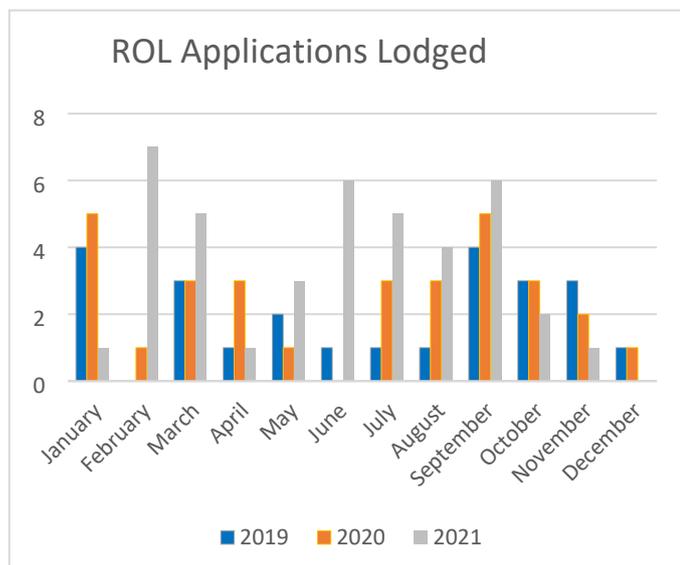

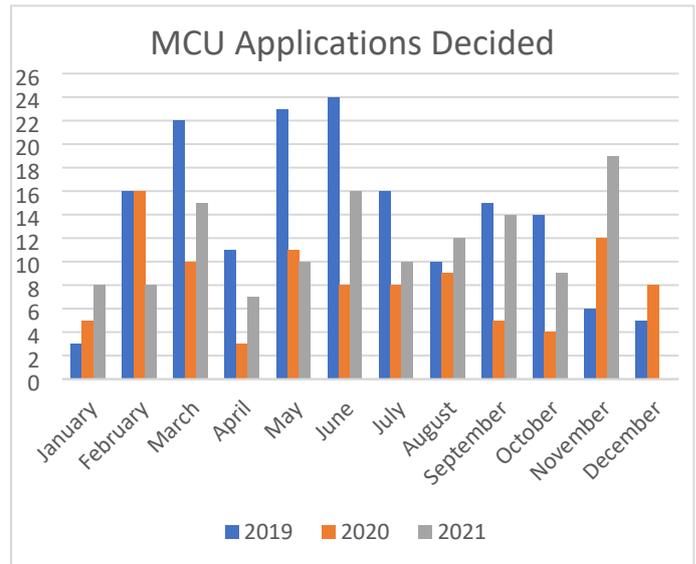

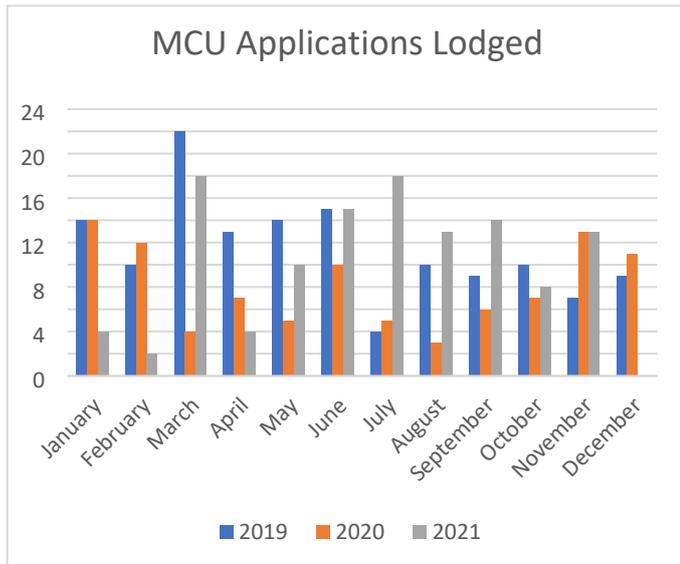

The Strategic Planning Branch is undertaking several projects, including;

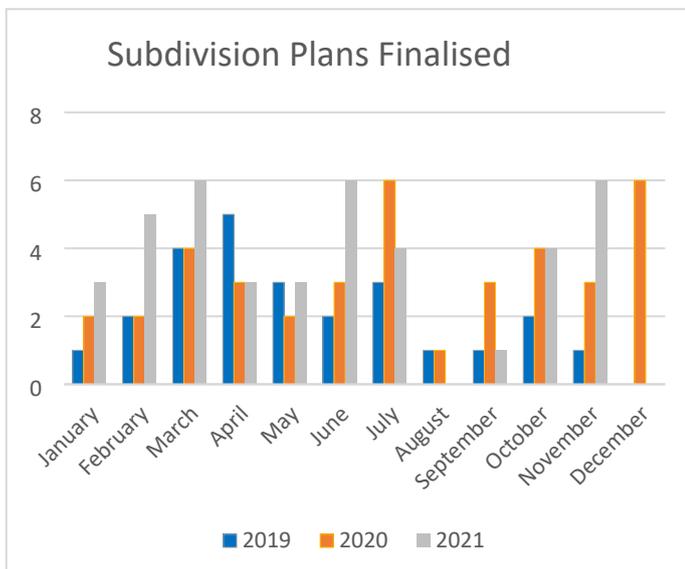

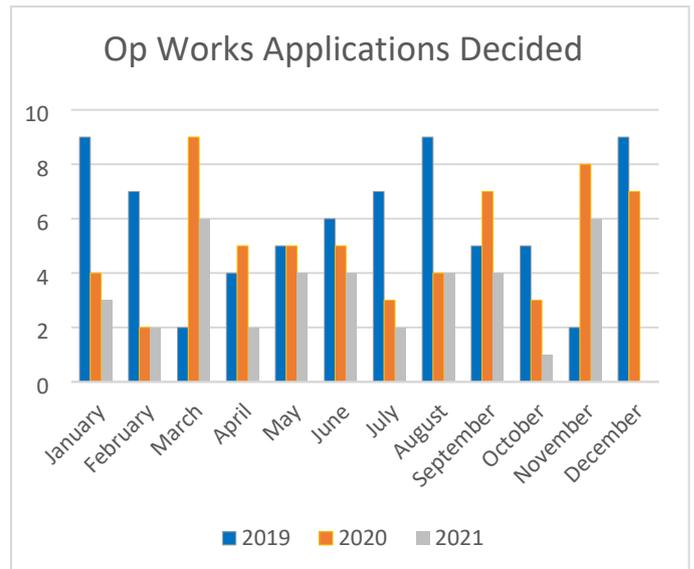

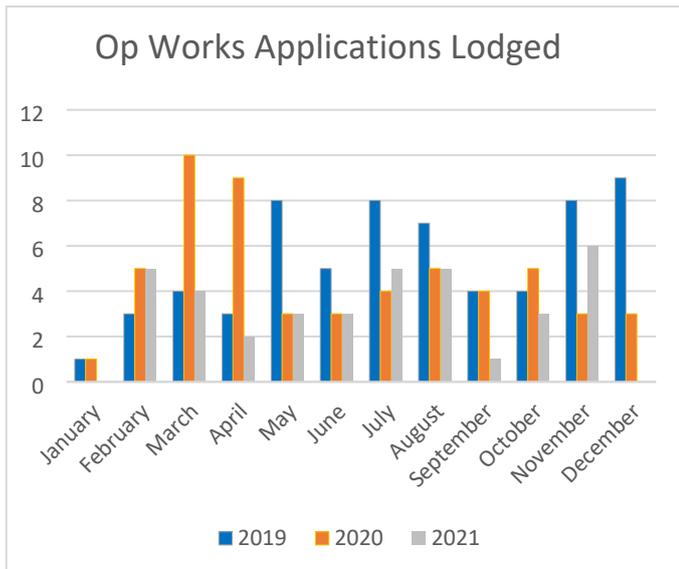

- Completion of State Interest Review of the Proposed Major Amendment of the Planning Scheme and reporting back to Council to discuss policy amendments;
- Public Consultation of the Airlie Beach Land Management Plan;
- Public Consultation of the Greater Airlie Beach Masterplan;
- Review of the Local Heritage Register;
- Ongoing development of the LGIP Amendment;
- Near completion of the Open Space Strategy;
- Preparation of the Open Space Standards (Development Manual);
- Research Affordable Housing Strategy;
- Strategic Referrals for Development Assessment; and
- Assessment of Façade Improvement Policy Applications.

# Development Assessment

The Development Assessment Unit is responsible for assessing development applications, reviewing referrals for state land, environmental impact statements and other material for coordinated projects, activities, preparing planning and development certificates and inspecting developments for compliance with development approvals and other planning requirements.

## Development Statistics

In the past 12 months...

**185**

**new lots were approved**

throughout the Region via approved Development Permits for Reconfiguration of a Lot

**102**

**new lots were created**

throughout the Region via sealed survey plans for Development Permits for Reconfiguration of a Lot

**Summary of Applications Approved by Council**

# Building, Plumbing & Compliance

The Building, Plumbing & Compliance branch is responsible for assessing/reviewing building and plumbing applications, developing and maintaining various building and plumbing related policies and registers; carrying out Building regulatory functions; and manage and regulate enforcement and compliance procedures.

## Building, Plumbing & Compliance Statistics

**13.4.1 - Donation and In-Kind Requests up to \$2,000.00 - November & December 2021**

**DATE:** Wednesday 8 December 2021

**TO:** Ordinary Council Meeting

**AUTHOR:** Emily Hart - Community Development Officer

**AUTHORISING OFFICER:** Julie Wright - Director Community Services

**PRESENTED FOR:** Decision

**ATTACHMENTS**

Nil

---

**PURPOSE**

To advise Council of the Donations and In-Kind support up to \$2,000.00 provided for the months of November and December 2021.

**OFFICER'S RECOMMENDATION**

That Council endorse the Donations and In-Kind support provided for the months of November and December 2021 to the following recipients:

- a) Bowen Girl Guides – Run a Sun Safety Stall at the Bowen Family Fun Day- \$350.00
- b) Murri Kids – 2022 NAIDOC Week School Initiatives - \$500.00
- c) St Mary's Catholic School P&F Association – 2022 Family Fun Day - \$1,000.00

---

**BACKGROUND**

As per resolution 2020/05/13.13, Council resolved to:

- a) Authorise the Chief Executive Officer to approve:
  - Request for Donation on Council Fee applications, and
  - Request for Donations, Sponsorships and In-Kind Support applications up to the value of \$2,000.00, and
- b) Approve the submission of a monthly report listing the applications processed.

**DISCUSSION/CURRENT ISSUE**

Council receives requests for assistance from community and sporting groups with most requests for amounts not exceeding \$2,000.00. In the months November and December 2021, the following donations were provided:

| Organisation Name                         | Description                                        | Donation Amount | In-Kind Support |
|-------------------------------------------|----------------------------------------------------|-----------------|-----------------|
| Bowen Girl Guides                         | Run a Sun Safety Stall at the Bowen Family Fun Day | \$350.00        | N/A             |
| Murri Kids                                | 2022 NAIDOC Week School Initiatives                | \$500.00        | N/A             |
| St Mary's Catholic School P&F Association | 2022 Family Fun Day                                | \$1,000.00      | N/A             |

|                                             |                   |            |
|---------------------------------------------|-------------------|------------|
| <b>Total for November and December 2021</b> | <b>\$1,850.00</b> | <b>N/A</b> |

## 13.4.2 - RADF 2021/22 Funding Round 2 - August - November 2021

**DATE:** Wednesday 8 December 2021

**TO:** Ordinary Council Meeting

**AUTHOR:** Jacqueline Neave - Arts & Community Programs Officer

**AUTHORISING OFFICER:** Julie Wright - Director Community Services

**PRESENTED FOR:** Decision

### **ATTACHMENTS**

Nil

---

### **PURPOSE**

To consider the RADF grant funding as recommended by the RADF Advisory Committee.

### **OFFICER'S RECOMMENDATION**

That Council approve the following RADF grants (subject to conditions) for Round 2, as recommended to Council by the RADF Advisory Committee:

- a) Music Evolution Project Inc. – Fast Track Minds Guitar Basics Workshops - \$6,630.00.
  - b) Noosa Film Academy Inc. – Remote Youth Film Festival – 3xday Screen Production Workshops and Red-Carpet Community Screening - \$3,935.00.
- 

### **BACKGROUND**

RADF invests in quality arts and cultural experiences across Queensland based on locally determined priorities.

Local Arts and Cultural workers submit applications to Council for funding grants. Applications are assessed by an elected committee against criteria based on program guidelines and priorities identified in Council's Arts and Cultural Policy.

All projects and activities receiving RADF funding are required to report on their contribution towards RADF 2021/22 Key Performance Outcomes (KPOs) included in the RADF guidelines.

The 2021/22 funding Round 2 closed on Friday, 5 November 2021 for projects commencing after Monday, 13 December 2021.

### **DISCUSSION/CURRENT ISSUE**

The following applications were submitted:

#### **Music Evolution Project Inc. – Fast Track Minds Guitar Basics Workshops**

Requested \$6,630.00 – Recommendation \$6,630.00

The objective of the project is to provide programs that support individuals learning, personal development and engage the community in participating in the art of music and performance

activities. Further, these outcomes may provide opportunities that support new and emerging artists.

The RADF Committee's recommendation is to fund the application. Commentary from the committee notes that the supporting documentation was excessive, but the information included was supportive of the proposed program. Other comments were that the workshops are a fantastic opportunity for the attendees to enhance their skills in guitar basics with the opportunity for youth in more rural areas given the chance to experience music within a group. Therefore, it is proposed this project is deserving of support.

### **Noosa Film Academy - Remote Youth Film Festival – 3xday Screen Production Workshops and Red-Carpet Community Screening**

Requested \$3,935.00 – Recommendation \$3,935.00

The objective of the project is to develop filmmaking skills for students and teachers to increase cultural capacity, produce short films for students' digital resumes and organise a community screening event that builds inter-school collaboration and networking opportunities.

The RADF Committee's recommendation is to fund the application, with the following conditions:

- a) RADF does not support recurring funding for the same or similar projects.
- b) further confirmation letters are required from the participating schools, and
- c) proof to be submitted to Council, of the approved major funding from Arts Queensland in support of the proposed workshops has been approved.

### **STATUTORY/COMPLIANCE MATTERS**

*Local Government Act 2009*  
Local Government Regulation 2012  
LSP\_COMM\_02 - Arts & Culture Policy

### **STRATEGIC IMPACTS**

Facilitate, foster and encourage region wide activities and programs that engage our community.

### **FINANCIAL IMPLICATIONS**

The funding for the support will be taken from budget code GL: 3640.6405 – Arts & Culture Development (3640) / Donations (6405).

| <b>Description</b>          | <b>Amount</b>      |
|-----------------------------|--------------------|
| 2021/22 Budget              | \$60,000.00        |
| Actual + Commitment         | \$6,420.00         |
| <b>YTD Remaining Budget</b> | <b>\$53,580.00</b> |

### **CONSULTATION/ENGAGEMENT**

### **13.4.3 - Endorsement of Donation Provided - 2021 Mt Coolon Community Christmas Tree Event - Isolated Children's Parents' Association of Belyando/Mt Coolon**

**DATE:** Wednesday 8 December 2021

**TO:** Ordinary Council Meeting

**AUTHOR:** Emily Hart - Community Development Officer

**AUTHORISING OFFICER:** Julie Wright - Director Community Services

**PRESENTED FOR:** Information

#### **ATTACHMENTS**

Nil

---

#### **PURPOSE**

To advise Council of the donation provided to the Isolated Children's Parents' Association (ICPA) of Belyando/Mt Coolon for their 2021 Mt Coolon Community Christmas Tree event held on 4 December 2021.

#### **OFFICER'S RECOMMENDATION**

That Council endorse the donation of \$3,920.00 provided to the Isolated Children's Parents' Association (ICPA) of Belyando/Mt Coolon for their 2021 Mt Coolon Community Christmas Tree event.

---

#### **BACKGROUND**

The Mt Coolon Community Christmas Tree is an annual end of year celebration and has been essential in aiding social interaction, mental health awareness and building community spirit. It brings the local Mt Coolon community together at the end of the year to enjoy a fun-filled night to relax and celebrate the year.

Council has supported this event previously by awarding funding through a Community Drought Support Grant of \$8,585.00 in 2017, a Special Projects Grant of \$8,916.00 in 2018 and a donation of \$4,370.00 in 2019.

#### **DISCUSSION/CURRENT ISSUE**

The ICPA of Belyando/Mt Coolon committee have advised that they have been unsuccessful in an application to secure funding from an alternative source and therefore approached Council for a donation to provide entertainment and amusement rides for the event.

Due to the timing of the request received by Council, and the actual date of the event, Officers were unable to submit a report to Council for consideration. The request was approved under the delegation of the CEO.

#### **STATUTORY/COMPLIANCE MATTERS**

*Local Government Act 2009*

## 13.4.4 - Sport & Recreation Clubs Grant - November 2021

**DATE:** Wednesday 8 December 2021

**TO:** Ordinary Council Meeting

**AUTHOR:** Jacqueline Neave - Arts & Community Programs Officer

**AUTHORISING OFFICER:** Julie Wright - Director Community Services

**PRESENTED FOR:** Decision

### ATTACHMENTS

Nil

---

### PURPOSE

For Council to consider the payment of the Sport & Recreation Clubs Grant for November 2021 in accordance with Council's Sport & Recreation Grant Guidelines.

### OFFICER'S RECOMMENDATION

That Council approve the payment of a Sport & Recreation Club Grant to the following recipients:

- a) Proserpine Whitsunday Junior Rugby League Football Club Inc. – Band 1 - \$5,500.00
- b) Bowen Cricket Inc. – Band 2 - \$3,000.00
- c) Proserpine Scout Group Inc. – Band 3 - \$1,500.00
- d) Proserpine Citizen's Band Inc. – Band 4 - \$1,000.00
- e) Port Denison Gun Club Inc. – Band 4 - \$1,000.00

---

### BACKGROUND

To be eligible for the sport & recreation grant a club must meet the following criteria:

- Is incorporated and meets its obligations with the Office of Fair Trading
- Is covered with the appropriate level of public liability insurance (\$20 million); and
- Provides membership data (as defined by Council) to the Council on an annual basis

The level of funding available to clubs is based on a progressive scale, the larger the participation rate, the larger the support to the club. Participation is defined as being the total number of active members within the club.

The Sport & Recreation Club Grants are allocated based on the following:

| Band Level | No. of Active Participants | Grant Allocation (\$) |
|------------|----------------------------|-----------------------|
| Band 1     | > 250                      | \$5,500.00            |
| Band 2     | 101 - 250                  | \$3,000.00            |
| Band 3     | 51 - 100                   | \$1,500.00            |
| Band 4     | 4 - 50                     | \$1,000.00            |

### DISCUSSION/CURRENT ISSUE

The following applications were submitted:

| Organisation Name                                            | Junior Members | Senior Members | Total Members | Grant Type/<br>Band | Amount Requested   |
|--------------------------------------------------------------|----------------|----------------|---------------|---------------------|--------------------|
| Proserpine Whitsunday Junior Rugby League Football Club Inc. | 247            | 92             | 339           | Club / 1            | \$5,500.00         |
| Bowen Cricket Inc.                                           | 60             | 82             | 142           | Club / 2            | \$3,000.00         |
| Proserpine Scout Group Inc.                                  | 40             | 16             | 56            | Club / 3            | \$1,500.00         |
| Proserpine Citizen's Band Inc.                               | 2              | 26             | 28            | Club / 4            | \$1,000.00         |
| Port Denison Gun Club Inc.                                   | 4              | 43             | 47            | Club / 4            | \$1,000.00         |
| <b>Total</b>                                                 |                |                |               |                     | <b>\$12,000.00</b> |

## 13.4.5 - Community Services Monthly Report - November 2021

**DATE:** Wednesday 8 December 2021

**TO:** Ordinary Council Meeting

**AUTHOR:** Monique Stevens - Administration Coordinator Community Services

**AUTHORISING OFFICER:** Julie Wright - Director Community Services

**PRESENTED FOR:** Information

### ATTACHMENTS

1. Community Services Monthly Report - November 2021 [13.4.5.1 - 21 pages]
- 

### PURPOSE

The purpose of the report is to set out an account of statistics pertaining to the functions of each branch within the Community Services Directorate for the month of November 2021.

### OFFICER'S RECOMMENDATION

That Council receive the Community Services Monthly Report for November 2021.

---

### BACKGROUND

The Community Services Directorate has a departmental vision of a prosperous, liveable, and sustainable Whitsundays. The directorate's purpose is to lead the delivery of economic, social, environmental, and recreational outcomes for the Whitsundays through services in partnership with stakeholders.

The directorate's vision is delivered by bringing together the functions of Community Development & Libraries, Aquatic Facilities & Caravan Parks, Environmental Health & Local Laws, Natural Resource Management & Climate, Customer Service, Cultural Heritage and Proserpine Entertainment Centre & Associated Venues.

### DISCUSSION/CURRENT ISSUE

This report provides an overview of Whitsunday Regional Council's Community Services Directorate for the 2021/2022 financial year with particular focus on the month of November 2021.

### STATUTORY/COMPLIANCE MATTERS

N/A

### STRATEGIC IMPACTS

Through strong and open leadership, develop an organisation with a culture of respect, accountability and community service.

### Monthly Report | November 2021

## Director's Report

November 2021 saw the Community Services Team undertake several events, activities and projects.

The Airlie Beach Movie Screen featured the movie *Moon Bound* for November with approximately 150 adults and children in attendance.

**Photo 1:** Airlie Beach Movie 'Moon Bound'

The Bowen Events team coordinated the Bowen Family Fun Day held at Hansen Park on Saturday, 4 November. The event saw over 500 people in attendance with attractions including a petting zoo, face painting, jumping castle, bungee run, live music and a fire truck demo. A big hit was the under 5's play area with painting, play-doh and sensory play for the little ones.

The Community Services team assisted with the media opportunity for official delegates to conduct the ribbon cutting and unveiling of a plaque for the opening of the Flagstaff Hill Conference and Cultural Centre.

The Community Development team hosted the launch of the Community Directory on 8 November with approximately 22 attendees.

**Photo 2:** Whitsunday Community Directory Launch

Environmental Health Food Business Inspections totalled 10 with 2 re-inspections required for the month.

The following are the average monthly occupancy rates at each of Council's Caravan Parks:

- Proserpine Tourist Park – 52.4% a 33.9% increase from November 2020.
- Wangaratta Caravan Park – 44.9% a 17.5% increase from November 2020.

The Bowen Work Camp is currently operating with nine ladies plus an officer in charge. The group have contributed a total of 708 hours during this month with mowing, landscaping and general Community and Council assistance including assisting with a W4Q project by laying turf in preparation for the Bowen Swim Club meet which attracted approximately 400 visitors and competitors to the region on 20 & 21 November 2021.

The Community Services Team received 242 CRMs for November (188 completed) with the Environmental Health and Local Law units receiving 209 complaints/requests for the month.

Council's Off-Street Carparks generated \$76,989 for the month with 10,666 transactions, a decrease of 21.9% from the previous month.

The Climate Hub Facebook Page reach increased by 34.4% to 3,690 for November from the previous month with 129 Website Visitors (36.5% decrease).

The Hub recently co-hosted The Zero Emissions Marine Tourism Event with the Coral Sea Academy on Tuesday, 16 November. The event was the first in a series of workshops planned as part of the Whitsunday Healthy Heart Project. This project is currently engaged with the marine tourism sector to decarbonise and achieve a sustainable destination accreditation for the Whitsunday Region. The workshop included presentations on the latest in hydrogen and electric technologies for the boating sector by guest speakers from as far away as Perth and Norway.

Natural Resource Management's Pest Management Projects for November 2021 include:

- Aerial shooting and ground baiting both continued this month throughout the region.
- Yellow Crazy Ant baiting, population transect work and eradication continued throughout the month.
- Continue to work on the Chinee Apple Biocontrol Project and the Pest Surveillance Programs.
- Staff attended the Bowen Landcare Groups AGM.

The Community Services Administration Officers' statistics for November 2021 include the following:

- Correspondence Generated – 698 items
- Civica & ECM Registrations – 2,820 tasks
- 1,433 Telephone Calls (internal and external)

Customer Service saw 1,564 visitors through the service centres, a decrease of 34.1% attendance to the previous month. The main enquiries were Rate Receiving & Rates Search.

Telephone calls received decreased by 7.3% from the previous month to 4,243 calls, with 78.04% resolved at the first point of contact.

Customer Requests submitted across the organisation for November 2021 was 1,031, an increase of 14.3% from October 2021 with 96.2% completed.

BPay, Austpost, Direct Deposits & EServices payments equalled 55.74% of total payments for the month a decrease of 16.2% from the previous month.

On-going W4Q projects continue at Proserpine & Bowen with the Collinsville Pool Disabled Amenity Block Project now completed.

A pre-start meeting has been held with the contractors engaged for the Airlie Lagoon Lighting Upgrade Project.

Aquatic Facility user statistics for November 2021 in comparison to November 2020 are listed below:

- Airlie Beach Lagoon decreased by 8.9% to 18,705
- Bowen Pool increased by 19.7% to 11,246
- Proserpine Pool increased by 15.09% to 8,302
- Collinsville Pool increased by 12.6% to 705

November was another busy month at Cannonvale Library with over 7,000 items loaned out to members, and over 600 usages of public access computers. Also, approximately 500 items were catalogued during the month ready for borrowing in the lead up to the Christmas/New Year closure period.

The Region's Libraries monthly attendance and e-Library decreased slightly however borrowings increased from October 2021.

- Attendance 7,406 – 2.8% decrease
- Borrowings 12,948 – 6.53% increase
- e-Library 4,917 – 5.62% decrease

Proserpine Library's click and collect had 110 visitors in November with an additional 40 home deliveries of 203 items this month.

Cannonvale and Bowen Libraries hosted book events for local author, illustrator and publisher, Sofia Fortunato, to help launch her new picture book "A New Coral Home for Augustine".

**Photo 3: Sofia Fortunato Book Launch**

Both libraries also hosted Better Together Housing information sessions - a shared housing initiative to facilitate housing options for women over 55.

The First 5 Forever team with the commencement of our Splash & Rhyme program at the Proserpine Pool. 15 families participated in 3 sessions learning about water awareness with a qualified swim instructor and then enjoying rhyme time by the pool. This year Whitsunday Regional Libraries collaborated with *Kids Alive Do The Five* to share important water safety messages to children aged four months to two years and their parents.

**Event Postponed due to COVID-19:**

- Proserpine Rotary Christmas Street Fair cancelled their annual event which was scheduled for 17 December due to the new restrictions coming into play and lack of resources the club have facilitating the check-in of attendees (double vaccinated)

**Special Project Grants Successful Recipients:**

Round 1 opened 12 July 2021 – Closed 15 October 2021

- 14 Applications received + 2 Re-submissions
- 10 Applications successful

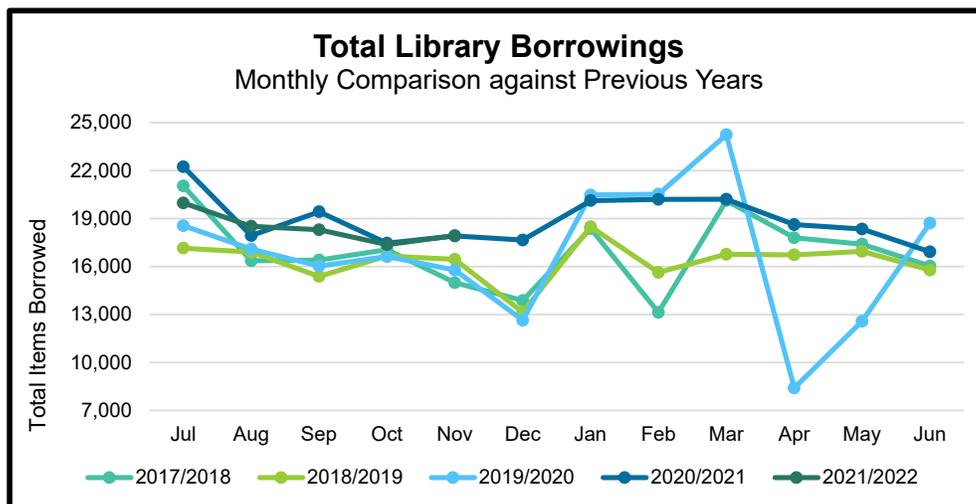

## Library Services

The Library Services branch is responsible for the provision of customer-centric services and resources to meet the information, recreation, cultural and lifelong learning needs of individuals and groups within the Whitsundays. The branch responsibilities include the design and delivery of library programs, promotion and marketing, collection development and maintenance, information/digital literacy opportunities, outreach, and service extension.

# Bowen Work Camp

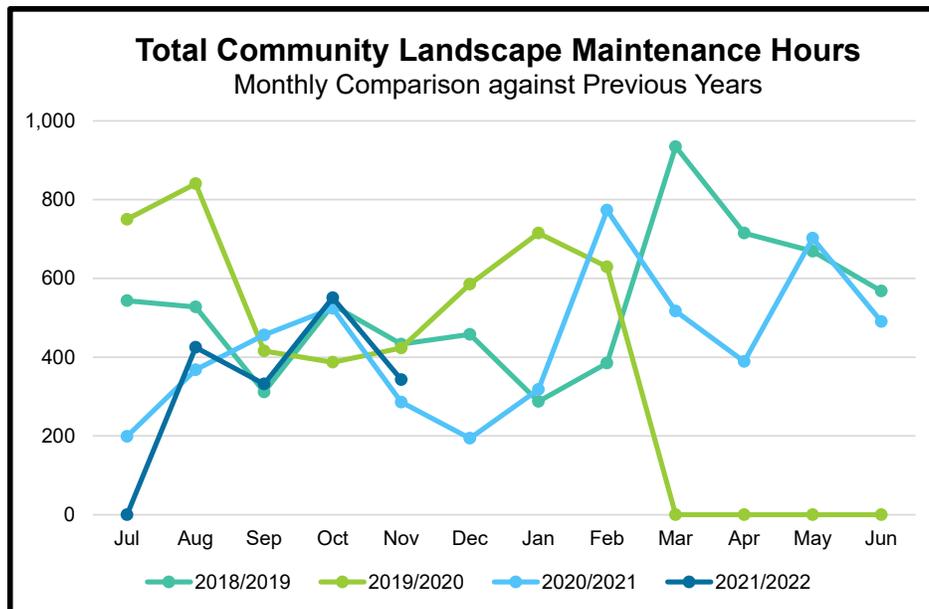

Council partners with Queensland Corrective Services to provide beneficial works projects for the community and rehabilitate offenders with their return to society. They perform a multitude of tasks including maintenance of fences, cemeteries, sportsgrounds and showgrounds, propagation of plants and they also participate in many restoration and general maintenance projects.

## Environmental Health & Local Laws

The Environmental Health & Local Laws branch is responsible for regulation of all local laws and laws associated with Environmental Protection and Public Health. The Environmental Health Unit is responsible for licensing and inspection of food and accommodation premises, assessment of liquor licensing referrals, provides development conditions and the protection of the environment and public health. The Local Laws unit licenses prescribed activities and addresses all breaches of Local Laws including animal control and property compliance involving vegetation, accumulation and temporary homes. Local Laws is also responsible for maintaining the animal impoundment facility, on/off-street car parking compliance and commercial parking operations. The branch is active in development, review and maintenance of related policies and registers.

## Update

### Pest Management Projects:

- Aerial shooting and ground baiting both continued this month throughout the region.
- Yellow Crazy Ants (YCA)
  - Shute Harbour and Funnel Bay were baited in September and the effectiveness was gauged by conducting transect monitoring in the first week of November. There were no YCA detected at Funnel Bay and 10 transects used to gauge the population at Shute Harbour. There were low numbers at half the transect locations and no YCA at a number of the transects.
  - Hamilton Island engaged a contractor to conduct the population transect work over their 8.5ha infestation. There were no YCA identified from the transects.
  - Council will work with Biodiversity Queensland on a process to confirm eradication at the Funnel Bay site and Hamilton Island.
- Continue to work on the Chinee Apple Biocontrol Project and the Pest Surveillance Programs.
- Staff attended the Bowen Landcare Groups AGM.

### Other Natural Resource Management Projects:

- Bushfire Management - A public meeting was held to discuss the development of an Airlie Beach Community Bushfire Plan. Landholders and Body Corporates attended with presentations from Qld Fire & Emergency Services, Queensland Parks & Wildlife Service and Council's Town Planners.
- The Flying Fox colony at Pelican Park, Collinsville have now gone.
- Council staff attended the recent Reef Guardian Council working group meeting in Mackay.

**Environment Projects:**

- The Matters of Local Environmental Significance (MLES) is near completion. This study will determine what locally significant issues can be incorporated into the Planning Scheme in the future and could be used to identify environmental off set areas.

**Climate Hub Projects – Underway/Completed:**

- Cr Grundy presented at a Central Queensland Clean Energy Forum and Oliva Brodhurst presented at the Innovate4cities Global Conference.
- The Hub is engaging communications consultants to roll out the Hubs Communications and Social Media Strategies this financial year. Their focus is starting a monthly e-newsletter and planning social media.
- The Hub presented to the Greater Whitsunday Alliance (GW3) to improve their understanding of what we do and how we can collaborate.
- The Hub attended the National Economic Development (ED) Conference with Cr Brunner and Council's ED team. The theme of the conference was the circular economy.
- The Hub coordinated a Zero Carbon Marine Tourism event on 16 November. The event focused on bringing new boat tech and future fuel information to the region. Presenters included Evoy, a Norwegian company developing large electric outboards, H2 Energy Company and State Development discussing the Queensland Hydrogen Strategy.
- The Whitsunday Healthy Heart Project Partners have been formally welcomed by the Mayor and presented with partnership certificates to display in their reception areas. There are currently 22 partners signed up, including some larger emitters such as Hayman and Daydream Island resorts, Coral Sea Marina, Cruise Whitsundays and Sealink Ferries.

**C-CAT Projects:**

- The Nature Based Solution (NBS) project which focuses on coastal management projects is near completion. The NBS project summaries activities across coastal Queensland on what projects have occurred to protect coastal areas from erosion and storm surge.
- There has been a process of planning what the future after March 2022 will hold for the C-CAT program with LGAQ proposing to reduce support after this date.
- A grant has been submitted to investigate cultural heritage issues and sea level rise.
- The C-CAT continues to be a forum to discuss coastal issues and climate change related planning.

## Customer Service

The Customer Service branch is responsible for providing excellence to Council's customers and stakeholders in their interactions with Council.

## Cultural Heritage

Our Cultural Heritage includes all the elements of our cultural way of life which have gone before us, and which exist now. Cultural Heritage is an expression of the ways of living developed by a community and passed on from generation to generation, including customs, practices, places, objects, artistic expressions, and values.

Cultural Heritage includes the Reconciliation Act Plan (RAP) for increased recognition of the Indigenous People in the Whitsunday Region and the Indigenous Land Use Agreement (ILUA) sets out activities and communications with all Traditional Owners in the region. The ILUA will ensure Council is compliant and provide the community with knowledge on the Traditional Owners within our region.

**13.5.1 - 500.2021.0119, 0122, 0123, 0124 & 0125 DRFA Road Packages - Collinsville**

**DATE:** Wednesday 8 December 2021

**TO:** Ordinary Council Meeting

**AUTHOR:** Trevor Williams - Disaster Recovery Project Director

**AUTHORISING OFFICER:** Adam Hagy - Director Infrastructure Services

**PRESENTED FOR:** Decision

**ATTACHMENTS**

Nil

---

**PURPOSE**

To present to Council for consideration the Evaluation's Recommendation to award the following DRFA Road Package Contracts:

- a) 500.2021.0119 – DRFA Road Package A4 – Collinsville South
- b) 500.2021.0121 – DRFA Road Package F4 – Collinsville West
- c) 500.2021.0122 – DRFA Road Package P4 – Collinsville Airport
- d) 500.2021.0123 – DRFA Road Package Q4 – Strathalbyn Road
- e) 500.2021.0124 – DRFA Road Package Y4 – Collinsville North
- f) 500.2021.0125 – DRFA Road Package Z4 – Normanby Road

**OFFICER'S RECOMMENDATION**

That Council award the following contracts:

- a) 500.2021.0119 – DRFA Road Package A4 – Collinsville South to LD & LJ Hillery Pty Limited for the amount of \$1,781,029.33 (excluding GST);
- b) 500.2021.0121 – DRFA Road Package F4 – Collinsville West to LD & LJ Hillery Pty Limited for the amount of \$4,976,115.00 (excluding GST);
- c) 500.2021.0122 – DRFA Road Package P4 – Collinsville Airport to Beddaws Pty Ltd T/As Copp & Co - Civil and Plant Hire for the amount of \$68,100.00 (excluding GST);
- d) 500.2021.0123 – DRFA Road Package Q4 – Strathalbyn Road to Beddaws Pty Ltd T/As Copp & Co - Civil and Plant Hire for the amount of \$913,997.24 (excluding GST);
- e) 500.2021.0124 – DRFA Road Package Y4 – Collinsville North to LD & LJ Hillery Pty Limited for the amount of \$1,727,182.18 (excluding GST); and
- f) 500.2021.0125 – DRFA Road Package Z4 – Normaby to LD & LJ Hillery Pty Limited for the amount of \$3,428,705.14 (excluding GST).

## **BACKGROUND**

Whitsunday Regional Council (Council) requires a suitably experienced and qualified contractor to carry out repairs and rehabilitation work on Council's rural road network in localities near Collinsville. In January 2021, North Queensland suffered another severe weather event as a result of Ex-Tropical Cyclone Imogen and the Monsoon Season and Council's assets once again received significant damage. The new road works will now be funded under the Queensland State Government's Disaster Recovery Funding Arrangements (DRFA).

Council is responsible for the maintenance of an extensive network of unsealed rural roads including roads of varying geometric standards, widths and pavement types. These roads are generally located in rural or remote localities with limited access to water or any other facilities. The impacted assets form an integral part of the Council road network and provide motorists, commercial transport and essential services access to the furthest extent of the Council Region in most weather conditions. The proposed works to nominated road segments include heavy formation grading, full-width formation grading with the incorporation of a Type 2.5 road base top-up and Re-sheets to various road segments in accordance with the attached schedule.

The six (6) packages of works are for the following roads:

- a) A4 – Collinsville South
  - i. Amberkolly Road
  - ii. Emu Plains Road
  - iii. Exmoor Road
- b) F4 – Collinsville West
  - i. Burdekin Falls Dam Road
  - ii. Scartwater Road
  - iii. Glendon Road
  - iv. Mount McConnell Road
  - v. Rutherford Road
- c) P4 – Collinsville Airport
  - i. Collinsville Airstrip
- d) Q4 – Strathalbyn Road
  - i. Strathalbyn Road
- e) Y4 - Collinsville North
  - i. Johnny Cake Road
  - ii. Tabletop Road
  - iii. Curringa Road
- f) Z4 – Normanby
  - i. Normanby Road
  - ii. Boundary Creek Road
  - iii. Parada Road
  - iv. Sutherland Road

## **PROCESS**

### **Tender Release**

An email was sent out to all relevant Contractors across the region from Council's Wet & Dry Hire Panel advising that these packages were being released. Responses were followed up, resulting in the six (6) Request for Quotations (RFQ's) were being released to the following interested Contractors via eTenderBox on the 19<sup>th</sup> October 2021:

- a) Adams Earthworks;
- b) Airlie Excavations;
- c) Beddaws Pty Ltd T/As Copp & Co – Civil and Plant Hire (Copp & Co);
- d) Coalfield Services;
- e) DJ Brazil Pty Ltd
- f) Dunk Farming;
- g) LD & LJ Hillery Pty Limited;
- h) LMP Project Services;
- i) Luke Morris Plumbing Pty Ltd;
- j) Mirthhill Pty Ltd T/As Pat McDonnell Earthmoving (McDonnell Earthmoving);
- k) Pattel's Collinsville Transport;
- l) RPH Industries (Qld) Pty Ltd;
- m) Seaforth Civil Pty Ltd;
- n) Searles Transport Pty Ltd;
- o) TFH Hire;
- p) The Trustee for S & J Family Trust (Essjay Contractors Pty Ltd); and
- q) Whitsunday Civil Pty Ltd.

### **Evaluation Panel**

The Evaluation Panel (EP) comprised:

- a) Disaster Recovery Project Manager – Project Delivery Managers Pty Ltd (PDM)
- b) Disaster Recovery Project Officer – Project Delivery Managers Pty Ltd (PDM)
- c) Contracts Coordinator – Corporate Services

### **Summary of Tenders Received**

There were seven (7) submissions received by 2.00 pm (AEST) on Tuesday 9<sup>th</sup> November 2021 as follows:

- a) 500.2021.0119 – DRFA Road Package A4 - Collinsville South:
  - i. Copp & Co;
  - ii. LD & LJ Hillery Pty Limited;
  - iii. RPH Industries (Qld) Pty Ltd;
  - iv. Seaforth Civil Pty Ltd; and
  - v. Searles Transport Pty Ltd.

- b) 500.2021.0121 – DRFA Road Package F4 – Collinsville West:
  - i. LD & LJ Hillery Pty Limited;
  - ii. RPH Industries (Qld) Pty Ltd; and
  - iii. Seaforth Civil Pty Ltd.
- c) 500.2021.0122 – DRFA Road Package P4 – Collinsville Airport:
  - i. Copp & Co;
  - ii. LD & LJ Hillery Pty Limited;
  - iii. RPH Industries (Qld) Pty Ltd;
  - iv. Seaforth Civil Pty Ltd; and
  - v. Searles Transport Pty Ltd.
- d) 500.2021.0123 – DRFA Road Package Q4 – Strathalbyn Road:
  - i. Copp & Co;
  - ii. DJ Brazil Pty Ltd
  - iii. LD & LJ Hillery Pty Limited;
  - iv. McDonnell Earthmoving;
  - v. RPH Industries (Qld) Pty Ltd; and
  - vi. Seaforth Civil Pty Ltd.
- e) 500.2021.0124 – DRFA Road Package Y4 – Collinsville North:
  - i. Copp & Co;
  - ii. LD & LJ Hillery Pty Limited;
  - iii. McDonnell Earthmoving;
  - iv. RPH Industries (Qld) Pty Ltd; and
  - v. Seaforth Civil Pty Ltd; and
  - vi. Seales Transport Pty Ltd.
- f) 500.2021.0125 – DRFA Road Package Z4 – Normanby Road:
  - i. Copp & Co;
  - ii. DJ Brazil Pty Ltd
  - iii. LD & LJ Hillery Pty Limited;
  - iv. McDonnell Earthmoving;
  - v. RPH Industries (Qld) Pty Ltd; and
  - vi. Seaforth Civil Pty Ltd.

Note: An initial compliance check was conducted on the tender submissions to identify if the responses were non-conforming with the requirements of the RFQ. This included compliance with contractual requirements and provision of requested information.

All of the Contractors were marked conforming and progressed to the qualitative criteria assessment on the basis that all the terms, conditions and mandatory requirements of the RFT had been met.

### Evaluation of Submissions

The Contractors were assessed against the qualitative selection criteria. The qualitative criteria were weighted according to their importance as perceived and agreed by members of the EP. Relative weightings were published within the RFQ's documentation as per below:

- |                                        |     |
|----------------------------------------|-----|
| a) Relevant Experience & Key Personnel | 20% |
| b) Demonstrated Understanding          | 20% |
| c) Tenderers Resources & Availability  | 10% |
| d) Pricing                             | 40% |
| e) Local Supplier                      | 10% |

### Summary of Evaluation Scores

The qualitative criteria assessment was carried out by the EP members individually on all the information provided by the Contractors according to the level of response and compliance to the requirements of the contract to determine the overall capability and best value for money for Council.

The evaluation of the conforming submissions involved an assessment of the level of each Contractor's responses to each of the criterion and was given a score between 0-10 with each criterion having an overall % weighted proportionally of the total evaluation score.

A summary of the tender final assessment is detailed below:

The below graph shows the pricing difference between the Tenderers:

- a) 500.2021.0119 – DRFA Road Package A4 - Collinsville South:

| Respondents                                           | Evaluation panel averaged Score | Total rank |
|-------------------------------------------------------|---------------------------------|------------|
| Beddaws Pty Ltd T/As Copp & Co - Civil and Plant Hire | 83.7%                           | 2          |
| LD & LJ Hillery Pty Limited                           | 88.0%                           | 1          |
| RPH Industries (QLD) Pty Ltd                          | 69.0%                           | 4          |
| Seaforth Civil Pty Ltd                                | 64.6%                           | 5          |
| Searles Transport Pty Ltd                             | 72.8%                           | 3          |

- b) 500.2021.0121 – DRFA Road Package F4 – Collinsville West:

| Respondents                  | Evaluation panel averaged Score | Total rank |
|------------------------------|---------------------------------|------------|
| LD & LJ Hillery Pty Limited  | 88.0%                           | 1          |
| RPH Industries (QLD) Pty Ltd | 69.0%                           | 2          |
| Seaforth Civil Pty Ltd       | 65.1%                           | 3          |

c) 500.2021.0122 – DRFA Road Package P4 – Collinsville Airport:

| Respondents                                           | Evaluation panel averaged Score | Total rank |
|-------------------------------------------------------|---------------------------------|------------|
| Beddaws Pty Ltd T/As Copp & Co - Civil and Plant Hire | 85.3%                           | 2          |
| LD & LJ Hillery Pty Limited                           | 88.0%                           | 1          |
| RPH Industries (QLD) Pty Ltd                          | 69.0%                           | 4          |
| Seaforth Civil Pty Ltd                                | 63.9%                           | 5          |
| Searles Transport Pty Ltd                             | 76.9%                           | 3          |

d) 500.2021.0123 – DRFA Road Package Q4 – Strathalbyn Road:

| Respondents                                           | Evaluation panel averaged Score | Total rank |
|-------------------------------------------------------|---------------------------------|------------|
| Beddaws Pty Ltd T/As Copp & Co - Civil and Plant Hire | 80.6%                           | 2          |
| DJ Brazil Pty Ltd                                     | 79.7%                           | 3          |
| LD & LJ Hillery Pty Limited                           | 88.8%                           | 1          |
| Mirthill Pty Ltd T/As Pat McDonnell Earthmoving       | 72.7%                           | 4          |
| RPH Industries (QLD) Pty Ltd                          | 69.0%                           | 5          |
| Seaforth Civil Pty Ltd                                | 65.4%                           | 6          |

d) 500.2021.0124 – DRFA Road Package Y4 – Collinsville North:

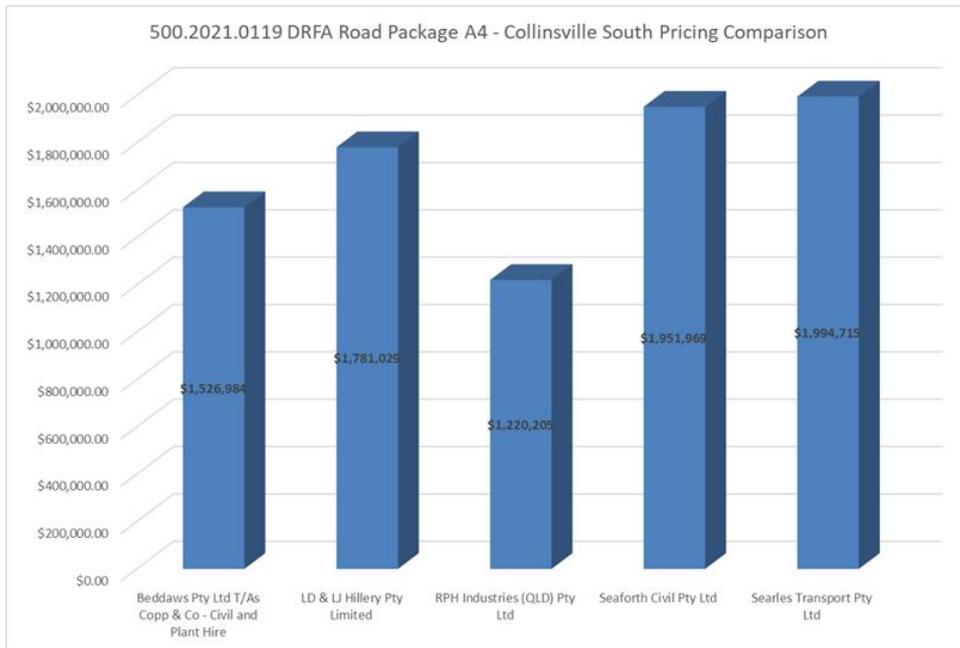

| Respondents                                           | Evaluation panel averaged Score | Total rank |
|-------------------------------------------------------|---------------------------------|------------|
| Beddaws Pty Ltd T/As Copp & Co - Civil and Plant Hire | 72.7%                           | 3          |
| LD & LJ Hillery Pty Limited                           | 88.0%                           | 1          |
| Mirthill Pty Ltd T/As Pat McDonnell Earthmoving       | 62.6%                           | 6          |
| RPH Industries (QLD) Pty Ltd                          | 69.0%                           | 5          |
| Seaforth Civil Pty Ltd                                | 71.7%                           | 4          |
| Searles Transport Pty Ltd                             | 72.8%                           | 2          |

e) 500.2021.0125 – DRFA Road Package Z4 – Normanby Road:

| Respondents                                           | Evaluation panel averaged Score | Total rank |
|-------------------------------------------------------|---------------------------------|------------|
| Beddaws Pty Ltd T/As Copp & Co - Civil and Plant Hire | 85.2%                           | 2          |
| DJ Brazil Pty Ltd                                     | 58.3%                           | 6          |
| LD & LJ Hillery Pty Limited                           | 88.0%                           | 1          |
| Mirthill Pty Ltd T/As Pat McDonnell Earthmoving       | 74.0%                           | 3          |
| RPH Industries (QLD) Pty Ltd                          | 69.0%                           | 4          |
| Seaforth Civil Pty Ltd                                | 61.1%                           | 5          |

The below graphs display the pricing differences between the Contractors:

a) 500.2021.0119 – DRFA Road Package A4 - Collinsville South:

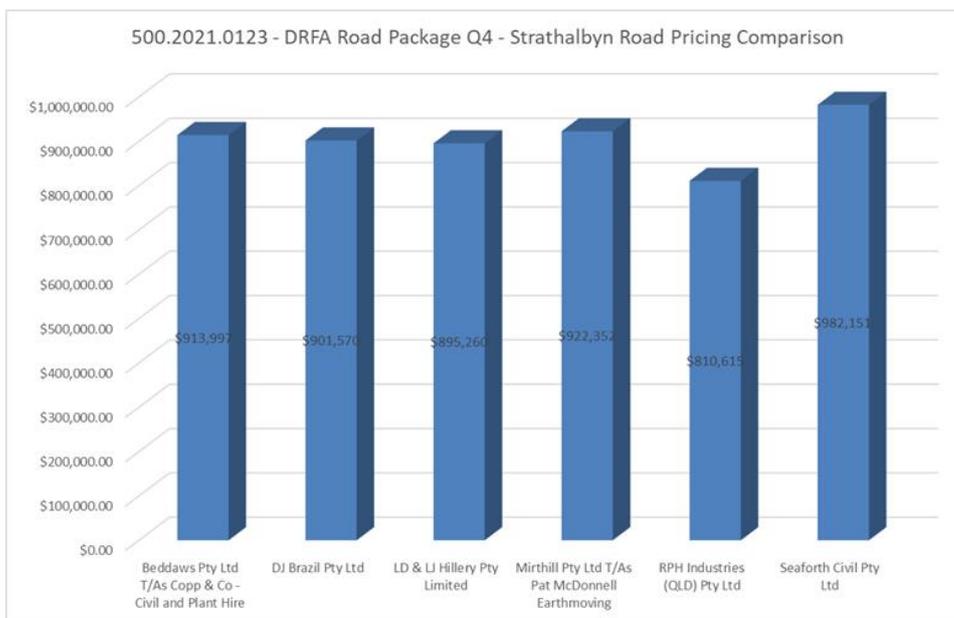

b) 500.2021.0121 – DRFA Road Package F4 – Collinsville West:

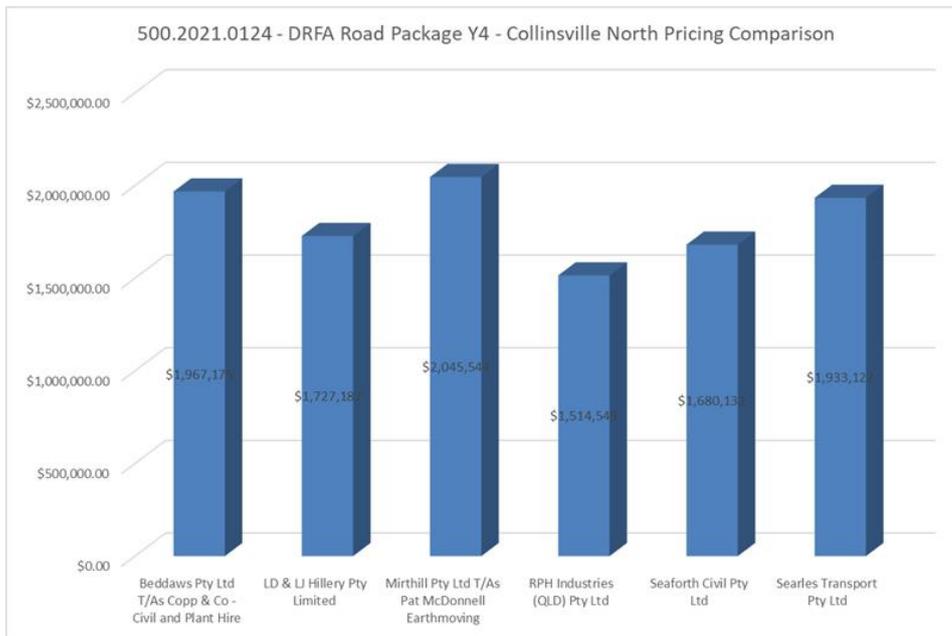

c) 500.2021.0122 – DRFA Road Package P4 – Collinsville Airport:

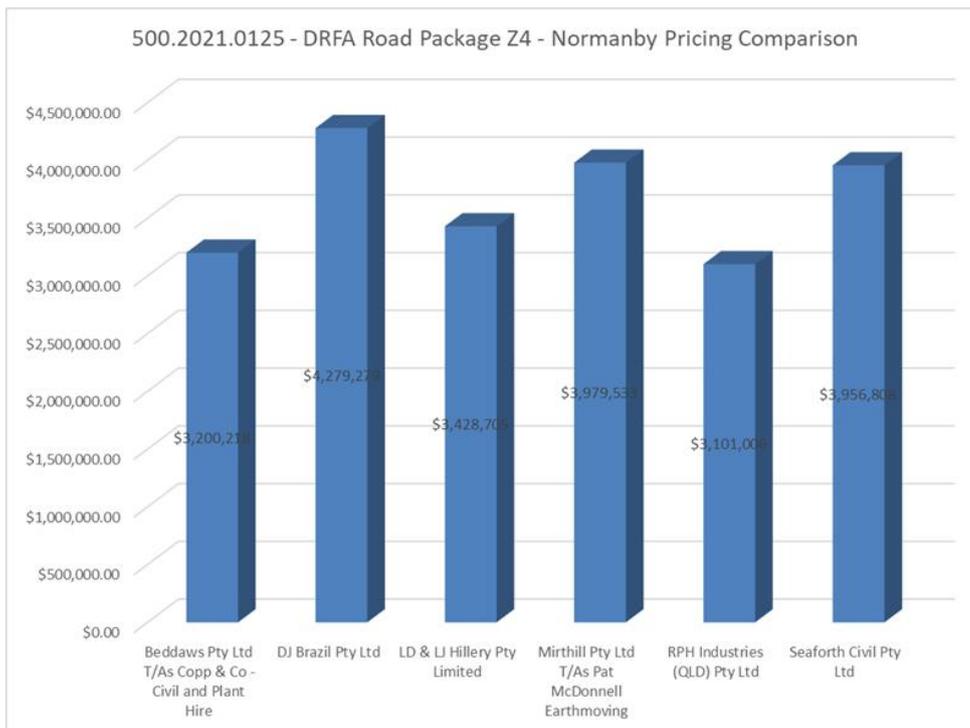

d) 500.2021.0123 – DRFA Road Package Q4 – Strathalbyn Road:

e) 500.2021.0124 – DRFA Road Package Y4 – Collinsville North:

f) 500.2021.0125 – DRFA Road Package Z4 – Normanby Road:

### **Combined Weighting Summary**

Based on the results of the Evaluation, LD & LJ Hillery Pty Limited were preferred in all six (6) road packages as they have:

- a) More than adequate resources;
- b) A large qualified and licenced workforce;
- c) Extensive experience in carrying out NDRRA/DRFA gravel road packages for Council, including many in similar locations around Collinsville and carrying out road maintenance for other companies as well;
- d) Provided competitive pricing for all road packages; and
- e) Their CEO is an ambassador for Real Mates Talk and they carry out Mates in Construction training which aligns with Council's expectations on large projects.

### **DISCUSSION/CURRENT ISSUE**

Although LD & LJ Hillery Pty Limited are the preferred Contractor in all six (6) road packages, if they were awarded all package their program would have all completed as late as November 2022, with 2 crews commencing on the Collinsville Airport and Strathalbyn Road Packages.

As the event occurred in January 2021, these roads to date have only had emergent works carried out on them to address any major safety issues, however the condition on portions of these roads require this maintenance activity to occur sooner to reduce minor safety issues and further deterioration on the current condition and with the wet season commencing there is a potential risk that this could occur and the works programs requiring extensions. Therefore, the Evaluation Panel recommends awarding the following smaller and less complicated road packages to Copp & Co, this way LD & LJ Hillery Pty Ltd can commence on the larger more remote location road packages earlier with all packages being completed by August 2022:

- a) 500.2021.0122 – DRFA Road Packages P4 – Collinsville Airport; and
- b) 500.2021.0123 – DRFA Road Package Q4 – Strathalbyn Road.

Copp & Co was ranked second in these packages as their pricing was competitive and they have the necessary resources and experience to successfully complete these packages. This in turn will reduce the timeframe and the works will be complete up to 3 months shorter than if all packages were awarded to LD & LJ Hillery Pty Limited.

### **STATUTORY/COMPLIANCE MATTERS**

Local Government Act 2009

S227 & S228 Local Government Regulations 2012

Work Health and Safety Act 2011

The procurement process has been conducted in accordance with Council's Policy and Legislative obligations.

### **STRATEGIC IMPACTS**

Maintain a high level of preparedness, capability, and responsiveness to respond to and recover from natural disasters that impact on our local communities and infrastructure.

## **FINANCIAL IMPLICATIONS**

Works will be required to be completed prior to 30<sup>th</sup> June 2023.

## **CONSULTATION/ENGAGEMENT**

Director Infrastructure Services  
Executive Manager Procurement, Property & Fleet  
Disaster Recovery Project Director  
Disaster Recovery Project Manager – Project Delivery Managers Pty Ltd (PDM)  
Disaster Recovery Project Officer – Project Delivery Managers Pty Ltd (PDM)  
Contracts Coordinator – Corporate Services

## **RISK ASSESSMENT**

Risks Management – The awarding of the Contracts will enable damaged roads in the Whitsunday Region to be repaired.

## **TIMINGS/DEADLINES**

By awarding the road packages to two Contractors will ensure a shorter timeframe for the completion works within the funding deadline of 30<sup>th</sup> June 2023.

## **CONFLICT OF INTEREST DECLARATION**

No officers (including both Council and external parties) contributing to the preparation and approval of this report have no conflicts of interest to declare.

## **HUMAN RIGHTS IMPACT**

No

## **ALTERNATIVES CONSIDERED**

N/A

## 14 MATTERS OF IMPORTANCE

This item on the agenda allows Councillors the opportunity to raise an item not included on the agenda for discussion as a matter of importance.

**15 CONFIDENTIAL MATTERS**

15.1 Corporate Services

**15.1.1 - Extension of Loan - Whitsunday Sports Park**

This report is CONFIDENTIAL under Section 245J (g) of the Local Government Regulation 2012 which permits the Council meeting to be closed to the public to discuss:

- (g) negotiations relating to a commercial matter involving the local government for which a public discussion would be likely to prejudice the interests of the local government.
